

PHP 4 Reference Card

by Steven R. Gould

Escaping HTML

```
preferred format <script language="php">...</script>
verbose <?php ... ?>
Less portable, may be disabled in phpini:
short-form <?expr?>
ASP-style <%...%>
ASP-style expression <%=expr%>
```

Basic syntax

```
statement terminator ;
C-style comments //...
C++-style comments /*...*/
shell-script-style comments #
block delimiters {
octal integers (prefix zero) 0
hexadecimal integers (prefix zero-ex) 0x or 0X
newline, cr, tab, backspace \n, \r, \t, \b
special characters \\, \?, \', \", \$
```

Data Types

```
boolean
integer
floating point
character string (parsed)
character string (unparsed)
class
resource (refer to PHP manual for details)
array where index can be non-negative int or string
```

Predefined PHP variables

Many variables are defined that are specific to the web

server and OS. Run `phpinfo()` for a complete list of these.

```
$argv array of arguments passed to script
$argc number of arguments in $argv
$PHP_SELF filename of currently executing script
```

The following are only available if `track-vars=On` in `php.ini`

```
$HTTP_COOKIE_VARS array of variables passed via cookies
$HTTP_GET_VARS array of variables passed via GET
$HTTP_POST_VARS array of variables passed via POST
$HTTP_POST_FILES array of files uploaded via POST
$HTTP_ENV_VARS array of variables from parent environment
$HTTP_SERVER_VARS array of variables from HTTP server
```

Control Structures

```
include filename
include-once filename
require filename
require-once filename
```

exit from `switch`, `while`, `do`, `for`
next iteration of `while`, `do`, `for`
go to (avoid if possible!) `label`
return value from function `return expr`
terminate execution `exit(arg)`

Flow Constructions (if/while/for/do/switch)

```
<?expr?>
if (expr) statement
else if (expr) statement
else statement
for (expr1; expr2; expr3)
statement
while (expr)
statement
do statement
while (expr);
switch (expr) {
    case const1: statement1 break;
    case const2: statement2 break;
    default: statement
}
```

bitwise and `&`
bitwise exclusive-or (`xor`) `^`
bitwise or (inclusive-or) `|`
logical and `&&`
logical or `||`
conditional expression `expr1?expr2:expr3`
assignment operators `=, +=, -=, *=, ...`
print operation `print`

logical and `and`
logical xor (exclusive-or) `xor`
logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

not [logical operator] `!`

ones compliment [bit operator] `~`

increment, decrement `++, --`

error control operator `\`

multiply, divide, modulus (remainder) `*`, `/`, `%`

addition, subtraction `+`, `-`, `.`

left, right shift [bit operations] `<<`, `>>`

comparison operators `>`, `>=`, `<`, `<=`

equality operators `==`, `!=`, `====`, `!==`

logical or (inclusive-or) `||`

logical and (inclusive-and) `&&`

logical xor (exclusive-or) `xor`

logical or (inclusive-or) `or`

list operator `,`

new operator `new`

array member accessor `[]`

PHP 4 Reference Card

String Functions <string>

```

return specific character      chr(n)
length of string              strlen(s)
String formatting/output
output string(s)              echo(s[...])
output formatted string       print(s[...])
return a formatted string     sprintf(s[,arg])
String comparison
binary safe case-sensitive compare strcmp(s1,s2)
binary safe case-insensitive compare strcasecmp(s1,s2)
binary safe case-insensitive compare strncasecmp(s1,s2,len)
Searching strings
find position of 1st occurrence of char. strpos(h,n[,offset])
find position of last occurrence of char. strrpos(h,n)
find first occurrence of string strstr(h,n)
case-insensitive version of strstr strrchr(h,n)
find last occurrence of char. strrchr(h,n)

String manipulation
convert to upper/lower case  strtoupper(s)/strtolower(s)
trim whitespace from start of string ltrim(s[,w])
trim whitespace from end of string rtrim(s[,w])
trim whitespace from start & end trim(s[,w])
strip HTML&PHP tags from string strip_tags(s[,allow])
reverse a string             strrev(s)
replace s1 with s2 in str    str_replace(s1,s2,str)
translate characters          substr(s,start[,len])
extract part of a string     substr_replace(s1,start[,len])

```

Filesystem Functions <filesystem>

```

open file                   fopen(filename,mode)
modes: r (read from beginning), w (overwrite), a (append)
modifiers: + (open for read & write), b (binary mode)
close file                  fclose(fp)
retrieve current position in file ftell(fp)
jump to position in file   fseek(fp,offset[,whence])
get next character from file fgetc(fp)
get line from file          fgets(fp[,len])
read entire file into array fread(fp)
test for End Of File        feof(fp)
binary-safe file read        fputts(fp,s,len)
write to file                fflush(fp)
flush output buffer          fwrite(fp,format[,var...])
copy a file                 fscanf(fp,format[,var...])
available disk space         copy(src,dst)
test for existence of file   diskFreeSpace(dir)
echo all remaining data      file_exists(filename)
is file readable?            fpassthru(fp)
is_writable(filename)        is_readable(filename)

```

Mathematical Functions <math>

trig functions	sin(x), cos(x), tan(x)
inverse trig functions	asin(x), acos(x), atan(x)
return ASCII value of character	ord(c)
length of string	strlen(s)
Hyperbolic trig functions	sinh(x), cosh(x), tanh(x)
exponentials & logs	exp(x), log(x), log10(x)
powers	pow(x,y), sqrt(x)
rounding	ceil(x), floor(x), abs(x)
minimum, maximum	min(x,...), max(x,...)
random number	rand(), rand(min,max)

Unified ODBC Functions <odbc>

connect to data source	odbc_connect(idn,user,pwd)
close connection(s)	odbc_close(id), odbc_close_all()
retrieve last error/msg	odbc_error(), odbc_errormsg()
prepare SQL statement	odbc_prepare(id,query)
execute prepared SQL statement	odbc_execute(id[,arg])
prepare & execute SQL statement	odbc_exec(id,query)
get result as an array	odbc_fetch_into(id[,row,result])
fetch a result row	odbc_fetch_row(id[,row])
get result from a field	odbc_result(id,field)
free result resources	odbc_free_result(id)
number of rows in result	odbc_num_rows(id)
output results in HTML table	odbc_result_all(id[,format])

Transactions

toggle autocommit on/off	odbc_autocommit(id)
commit transaction	odbc_commit(id)
rollback transaction	odbc_rollback(id)

Session Handling Functions <session>

register variables in session	session_register(name[...])
unregister variable	session_unregister(name)
variable is registered?	session_is_registered(name)
get cookie parameters	session_get_cookie_params()
set cookie params	session_set_cookie_params(l[,p[,s]])
write data & close session	session_write_close()

Miscellaneous Functions <misc>

evaluate string as PHP code	eval(s)
terminate script	exit(s), exit(s)

Date/Time Functions

format a local date/time	date(format[,timestamp])
current time in secs. since Jan.1, 1970	time()
current time in microseconds	microtime()

External program execution

The following can be used to execute an external program.

They differ in their handling of the output.	
output returned in result array	exec(prg[,result,status])
output returned as string	shell_exec(prg)
display output	system(prg[,status])
display raw output	passthru(prg[,status])
