Typographic Conventions

name; ^{Fu}**name**; ^M**name**; ^{sO}**name**; ^{rF}**name**; ^{var}***name***; ^{co}**name**
 ▷ Symbol defined in Common Lisp; esp. function, macro, special operator, generic function, variable, constant.

them ▷ Placeholder for actual code.

me ▷ Literal text.

[*foo**bar*] ▷ Either one *foo* or nothing; defaults to *bar*.

*foo**; {*foo*}* ▷ Zero or more *foos*.

foo⁺; {*foo*}⁺ ▷ One or more *foos*.

foos ▷ English plural denotes a list argument.

{*foo*|*bar*|*baz*}; $\begin{cases} \textit{foo} \\ \textit{bar} \\ \textit{baz} \end{cases}$ ▷ Either *foo*, or *bar*, or *baz*.

$\begin{cases} \textit{foo} \\ \textit{bar} \\ \textit{baz} \end{cases}$ ▷ Anything from none to each of *foo*, *bar*, and *baz*.

$\widehat{\textit{foo}}$ ▷ Argument *foo* is not evaluated.

$\widetilde{\textit{bar}}$ ▷ Argument *bar* is possibly modified.

foo^P* ▷ *foo** is evaluated as in ^{sO}**progn**; see p. 21.

foo; *bar*; *baz*_{*n*} ▷ Primary, secondary, and *n*th return value.

T; NIL ▷ **t**, or truth in general; and **nil** or **()**.

1 Numbers

1.1 Predicates

$(\stackrel{Fu}{=} number^+)$
 $(\neq number^+)$

▷ T if all *numbers*, or none, respectively, are equal in value.

$(\stackrel{Fu}{>} number^+)$
 $(\stackrel{Fu}{>=} number^+)$
 $(\stackrel{Fu}{<} number^+)$
 $(\stackrel{Fu}{<=} number^+)$

▷ Return T if *numbers* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

$(\stackrel{Fu}{\text{minusp}} a)$
 $(\stackrel{Fu}{\text{zerop}} a)$
 $(\stackrel{Fu}{\text{plusp}} a)$

▷ T if $a < 0$, $a = 0$, or $a > 0$, respectively.

$(\stackrel{Fu}{\text{evenp}} integer)$
 $(\stackrel{Fu}{\text{oddp}} integer)$

▷ T if *integer* is even or odd, respectively.

$(\stackrel{Fu}{\text{numberp}} foo)$
 $(\stackrel{Fu}{\text{realp}} foo)$
 $(\stackrel{Fu}{\text{rationalp}} foo)$
 $(\stackrel{Fu}{\text{floatp}} foo)$
 $(\stackrel{Fu}{\text{integerp}} foo)$
 $(\stackrel{Fu}{\text{complexp}} foo)$
 $(\stackrel{Fu}{\text{random-state-p}} foo)$

▷ T if *foo* is of indicated type.

1.2 Numeric Functions

$(\stackrel{Fu}{+} a_{\square}^*)$
 $(\stackrel{Fu}{*} a_{\square}^*)$

▷ Return $\sum a$ or $\prod a$, respectively.

$(\stackrel{Fu}{-} a b^*)$
 $(\stackrel{Fu}{/} a b^*)$

▷ Return $a - \sum b$ or $a / \prod b$, respectively. Without any *bs*, return $-a$ or $1/a$, respectively.

$(\stackrel{Fu}{I+} a)$
 $(\stackrel{Fu}{I-} a)$

▷ Return $a + 1$ or $a - 1$, respectively.

$(\left\{ \begin{array}{l} \text{incf} \\ \text{decf} \end{array} \right\} \widetilde{place} [delta_{\square}])$

▷ Increment or decrement the value of *place* by *delta*. Return new value.

$(\stackrel{Fu}{\text{exp}} p)$
 $(\stackrel{Fu}{\text{expt}} b p)$

▷ Return e^p or b^p , respectively.

$(\log a [b])$

▷ Return $\log_b a$ or, without *b*, $\ln a$.

$(\stackrel{Fu}{\text{sqr}} n)$
 $(\stackrel{Fu}{\text{isqr}} n)$

▷ \sqrt{n} in complex or natural numbers, respectively.

$(\stackrel{Fu}{\text{lcm}} integer^*_{\square})$
 $(\stackrel{Fu}{\text{gcd}} integer^*_{\square})$

▷ Least common multiple or greatest common denominator, respectively, of *integers*. (**gcd**) returns 0.

co_pi

▷ **long-float** approximation of π , Ludolph's number.

$(\stackrel{Fu}{\text{sin}} a)$
 $(\stackrel{Fu}{\text{cos}} a)$
 $(\stackrel{Fu}{\text{tan}} a)$

▷ $\sin a$, $\cos a$, or $\tan a$, respectively. (*a* in radians.)

$(\stackrel{Fu}{\text{asin}} a)$
 $(\stackrel{Fu}{\text{acos}} a)$

▷ $\arcsin a$ or $\arccos a$, respectively, in radians.

$(\stackrel{Fu}{\text{atan}} a [b_{\square}])$

▷ $\arctan \frac{a}{b}$ in radians.

(^{Fu}**sinh** *a*)
(^{Fu}**cosh** *a*) ▷ sinh *a*, cosh *a*, or tanh *a*, respectively.
(^{Fu}**tanh** *a*)

(^{Fu}**asinh** *a*)
(^{Fu}**acosh** *a*) ▷ asinh *a*, acosh *a*, or atanh *a*, respectively.
(^{Fu}**atanh** *a*)

(^{Fu}**cis** *a*) ▷ Return $e^{i a} = \cos a + i \sin a$.

(^{Fu}**conjugate** *a*) ▷ Return complex conjugate of *a*.

(^{Fu}**max** *num*⁺)
(^{Fu}**min** *num*⁺) ▷ Greatest or least, respectively, of *nums*.

(^{Fu}**round** *d*)
(^{Fu}**floor** *d*)
(^{Fu}**ceiling** *d*)
(^{Fu}**truncate** *d*)

▷ Return as integer or float, respectively, n/d rounded, or rounded towards $-\infty$, $+\infty$, or 0, respectively; and remainder.

(^{Fu}**mod** *n* *d*)
(^{Fu}**rem** *n* *d*)

▷ Same as ^{Fu}**floor** or ^{Fu}**truncate**, respectively, but return remainder only.

(^{Fu}**random** *limit* [*state* ^{var}***random-state***])
▷ Return non-negative random number less than *limit*, and of the same type.

(^{Fu}**make-random-state** [*state* **NIL** | **T** | **INIT**])
▷ Copy of **random-state** object *state* or of the current random state; or a randomly initialized fresh random state.

^{var}***random-state*** ▷ Current random state.

(^{Fu}**float-sign** *num-a* [*num-b*]) ▷ num-b with *num-a*'s sign.

(^{Fu}**signum** *n*)
▷ Number of magnitude 1 representing sign or phase of *n*.

(^{Fu}**numerator** *rational*)
(^{Fu}**denominator** *rational*)
▷ Numerator or denominator, respectively, of *rational*'s canonical form.

(^{Fu}**realpart** *number*)
(^{Fu}**imagpart** *number*)
▷ Real part or imaginary part, respectively, of *number*.

(^{Fu}**complex** *real* [*imag*]) ▷ Make a complex number.

(^{Fu}**phase** *number*) ▷ Angle of *number*'s polar representation.

(^{Fu}**abs** *n*) ▷ Return |n|.

(^{Fu}**rational** *real*)
(^{Fu}**rationalize** *real*)
▷ Convert *real* to rational. Assume complete/limited accuracy for *real*.

(^{Fu}**float** *real* [*prototype* **0.0F0**])
▷ Convert *real* into float with type of *prototype*.

1.3 Logic Functions

Negative integers are used in two's complement representation.

^{Fu}(**boole** operation *int-a int-b*)

▷ Return value of bitwise logical *operation*. *operations* are

^{co}**boole-1** ▷ *int-a*.
^{co}**boole-2** ▷ *int-b*.
^{co}**boole-c1** ▷ \neg *int-a*.
^{co}**boole-c2** ▷ \neg *int-b*.
^{co}**boole-set** ▷ All bits set.
^{co}**boole-clr** ▷ All bits zero.
^{co}**boole-eqv** ▷ $int-a \equiv int-b$.
^{co}**boole-and** ▷ $int-a \wedge int-b$.
^{co}**boole-andc1** ▷ $\neg int-a \wedge int-b$.
^{co}**boole-andc2** ▷ $int-a \wedge \neg int-b$.
^{co}**boole-nand** ▷ $\neg(int-a \wedge int-b)$.
^{co}**boole-ior** ▷ $int-a \vee int-b$.
^{co}**boole-orc1** ▷ $\neg int-a \vee int-b$.
^{co}**boole-orc2** ▷ $int-a \vee \neg int-b$.
^{co}**boole-xor** ▷ $\neg(int-a \equiv int-b)$.
^{co}**boole-nor** ▷ $\neg(int-a \vee int-b)$.

^{Fu}(**lognot** *integer*) ▷ \neg *integer*.

^{Fu}(**logeqv** *integer**)

^{Fu}(**logand** *integer**)

▷ Return value of exclusive-nored or anded *integers*, respectively. Without any *integer*, return 1.

^{Fu}(**logandc1** *int-a int-b*) ▷ $\neg int-a \wedge int-b$.

^{Fu}(**logandc2** *int-a int-b*) ▷ $int-a \wedge \neg int-b$.

^{Fu}(**lognand** *int-a int-b*) ▷ $\neg(int-a \wedge int-b)$.

^{Fu}(**logxor** *integer**)

^{Fu}(**logior** *integer**)

▷ Return value of exclusive-ored or ored *integers*, respectively. Without any *integer*, return 0.

^{Fu}(**logorc1** *int-a int-b*) ▷ $\neg int-a \vee int-b$.

^{Fu}(**logorc2** *int-a int-b*) ▷ $int-a \vee \neg int-b$.

^{Fu}(**lognor** *int-a int-b*) ▷ $\neg(int-a \vee int-b)$.

^{Fu}(**logbitp** *i integer*)

▷ T if zero-indexed *i*th bit of *integer* is set.

^{Fu}(**logtest** *int-a int-b*)

▷ Return T if there is any bit set in *int-a* which is set in *int-b* as well.

^{Fu}(**logcount** *int*)

▷ Number of 1 bits in *int* ≥ 0, number of 0 bits in *int* < 0.

1.4 Integer Functions

^{Fu}(**integer-length** *integer*)

▷ Number of bits necessary to represent *integer*.

^{Fu}(**ldb-test** *byte-spec integer*)

▷ Return **T** if any bit specified by *byte-spec* in *integer* is set.

^{Fu}(**ash** *integer count*)

▷ Return copy of *integer* arithmetically shifted left by *count* adding zeros at the right, or, for *count* < 0, shifted right discarding bits.

^{Fu}(**ldb** *byte-spec integer*)

▷ Extract byte denoted by *byte-spec* from *integer*. **setfable**.

^{Fu}(**deposit-field**)
(^{Fu}**dpb**) *int-a byte-spec int-b*)

▷ Return *int-b* with bits denoted by *byte-spec* replaced by corresponding bits of *int-a*, or by the low (**byte-size** *byte-spec*) bits of *int-a*, respectively.

^{Fu}(**mask-field** *byte-spec integer*)

▷ Return copy of *integer* with all bits unset but those denoted by *byte-spec*. **setfable**.

^{Fu}(**byte** *size position*)

▷ Byte specifier for a byte of *size* bits starting at a weight of $2^{position}$.

^{Fu}(**byte-size** *byte-spec*)

^{Fu}(**byte-position** *byte-spec*)

▷ Size or position, respectively, of *byte-spec*.

1.5 Implementation-Dependent

^{co}**short-float** }
^{co}**single-float** } { **epsilon**
^{co}**double-float** } { **negative-epsilon**
^{co}**long-float** }

▷ Smallest possible number making a difference when added or subtracted, respectively.

^{co}**least-negative** }
^{co}**least-negative-normalized** } { **short-float**
^{co}**least-positive** } { **single-float**
^{co}**least-positive-normalized** } { **double-float**
 } { **long-float**

▷ Available numbers closest to -0 or $+0$, respectively.

^{co}**most-negative** }
^{co}**most-positive** } { **short-float**
 } { **single-float**
 } { **double-float**
 } { **long-float**
 } { **fixnum**

▷ Available numbers closest to $-\infty$ or $+\infty$, respectively.

^{Fu}(**decode-float** *n*)

^{Fu}(**integer-decode-float** *n*)

▷ Return significand, exponent, and sign of *float n*.

^{Fu}(**scale-float** *n* [*i*]) ▷ With *n*'s radix *b*, return nb^i .

^{Fu}(**float-radix** *n*)

^{Fu}(**float-digits** *n*)

^{Fu}(**float-precision** *n*)

▷ Radix, number of digits in that radix, or precision in that radix, respectively, of *float n*.

^{Fu}(**upgraded-complex-part-type** *foo* [*environment*])

▷ Type of most specialized **complex** number able to hold parts of type *foo*.

 DIGIT-CHAR 7

2 Characters

The **standard-char** type comprises a-z, A-Z, 0-9, **NewLine**, **Space**, and **!?"' , . : ; * + - / \ ~ ^ < > = % # & () [] { } .**

(^{Fu}characterp *foo*)
(^{Tu}standard-char-p *char*) ▷ **T** if argument is of indicated type.

(^{Fu}graphic-char-p *character*)
(^{Fu}alpha-char-p *character*)
(^{Fu}alphanumericp *character*)
 ▷ **T** if *character* is visible, alphabetic, or alphanumeric, respectively.

(^{Fu}upper-case-p *character*)
(^{Fu}lower-case-p *character*)
(^{Fu}both-case-p *character*)
 ▷ Return **T** if *character* is uppercase, lowercase, or able to be in another case, respectively.

(^{Fu}digit-char-p *character* [*radix*])
 ▷ Return *its weight* if *character* is a digit, or **NIL** otherwise.

(^{Fu}char= *character*⁺)
(^{Fu}char/= *character*⁺)
 ▷ Return **T** if all *characters*, or none, respectively, are equal.

(^{Fu}char-equal *character*⁺)
(^{Fu}char-not-equal *character*⁺)
 ▷ Return **T** if all *characters*, or none, respectively, are equal ignoring case.

(^{Fu}char> *character*⁺)
(^{Fu}char>= *character*⁺)
(^{Fu}char< *character*⁺)
(^{Fu}char<= *character*⁺)
 ▷ Return **T** if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

(^{Fu}char-greaterp *character*⁺)
(^{Fu}char-not-lessp *character*⁺)
(^{Fu}char-lessp *character*⁺)
(^{Fu}char-not-greaterp *character*⁺)
 ▷ Return **T** if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively, ignoring case.

(^{Fu}char-upcase *character*)
(^{Fu}char-downcase *character*)
 ▷ Return corresponding uppercase/lowercase *character*, respectively.

(^{Fu}digit-char *i* [*radix*]) ▷ *Character* representing digit *i*.

(^{Fu}char-name *character*) ▷ *character*'s *name* if any, or **NIL**.

(^{Fu}name-char *foo*) ▷ *Character* named *foo* if any, or **NIL**.

(^{Fu}char-int *character*)
(^{Fu}char-code *character*) ▷ *Code* of *character*.

(^{Fu}code-char *code*) ▷ *Character* with *code*.

^{Co}char-bound ▷ Upper bound of (**^{Fu}char-code** *char*); ≥ 96 .

(^{Fu}character *c*) ▷ Return **#\c**.

3 Strings

Strings can as well be manipulated by array and sequence functions; see pages 11 and 12.

$(\overset{\text{Fu}}{\text{stringp}} \text{foo})$
 $(\overset{\text{Fu}}{\text{simple-string-p}} \text{foo})$ ▷ T if *foo* is of indicated type.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{string=}} \\ \overset{\text{Fu}}{\text{string-equal}} \end{array} \right\} \text{foo bar}$ $\left\{ \begin{array}{l} \text{:start1 } \text{start-foo}_{\text{0}} \\ \text{:start2 } \text{start-bar}_{\text{0}} \\ \text{:end1 } \text{end-foo}_{\text{NIL}} \\ \text{:end2 } \text{end-bar}_{\text{NIL}} \end{array} \right\}$

▷ Return T if subsequences of *foo* and *bar* are equal. Obey/ignore, respectively, case.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{string}} \{ / = | \text{-not-equal} \} \\ \overset{\text{Fu}}{\text{string}} \{ > | \text{-greaterp} \} \\ \overset{\text{Fu}}{\text{string}} \{ > = | \text{-not-lessp} \} \\ \overset{\text{Fu}}{\text{string}} \{ < | \text{-lessp} \} \\ \overset{\text{Fu}}{\text{string}} \{ < = | \text{-not-greaterp} \} \end{array} \right\} \text{foo bar}$ $\left\{ \begin{array}{l} \text{:start1 } \text{start-foo}_{\text{0}} \\ \text{:start2 } \text{start-bar}_{\text{0}} \\ \text{:end1 } \text{end-foo}_{\text{NIL}} \\ \text{:end2 } \text{end-bar}_{\text{NIL}} \end{array} \right\}$

▷ If *foo* is lexicographically not equal, greater, not less, less, or not greater, respectively, then return position of first mismatching character in *foo*. Otherwise return NIL. Obey/ignore, respectively, case.

$(\overset{\text{Fu}}{\text{make-string}} \text{size} \left\{ \begin{array}{l} \text{:initial-element } \text{char} \\ \text{:element-type } \text{type}_{\text{character}} \end{array} \right\})$

▷ Return string of length *size*.

$(\overset{\text{Fu}}{\text{string}} \text{x})$
 $\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{string-capitalize}} \\ \overset{\text{Fu}}{\text{string-upcase}} \\ \overset{\text{Fu}}{\text{string-downcase}} \end{array} \right\} \text{x} \left\{ \begin{array}{l} \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \end{array} \right\}$

▷ Convert *x* (**symbol**, **string**, or **character**) into a string, a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{nstring-capitalize}} \\ \overset{\text{Fu}}{\text{nstring-upcase}} \\ \overset{\text{Fu}}{\text{nstring-downcase}} \end{array} \right\} \widetilde{\text{string}} \left\{ \begin{array}{l} \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \end{array} \right\}$

▷ Convert *string* into a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{string-trim}} \\ \overset{\text{Fu}}{\text{string-left-trim}} \\ \overset{\text{Fu}}{\text{string-right-trim}} \end{array} \right\} \text{char-bag string}$

▷ Return string with all characters in sequence *char-bag* removed from both ends, from the beginning, or from the end, respectively.

$(\overset{\text{Fu}}{\text{char}} \text{string } i)$
 $(\overset{\text{Fu}}{\text{schar}} \text{string } i)$

▷ Return zero-indexed *i*th character of string ignoring/obeying, respectively, fill pointer. **setf**able.

$(\overset{\text{Fu}}{\text{parse-integer}} \text{string} \left\{ \begin{array}{l} \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:radix } \text{int}_{\text{10}} \\ \text{:junk-allowed } \text{bool}_{\text{NIL}} \end{array} \right\})$

▷ Return integer parsed from *string* and index of parse end.

4 Conses

4.1 Predicates

$(\overset{\text{Fu}}{\text{consp}} \text{foo})$
 $(\overset{\text{Fu}}{\text{listp}} \text{foo})$ ▷ Return T if *foo* is of indicated type.

$(\overset{\text{Fu}}{\text{endp}} \text{list})$
 $(\overset{\text{Fu}}{\text{null}} \text{foo})$ ▷ Return T if *list/foo* is NIL.

$(\overset{\text{Fu}}{\text{short-site-name}})$
 $(\overset{\text{Fu}}{\text{long-site-name}})$ ▷ String representing physical location of computer.

$\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{lisp-implementation}} \\ \overset{\text{Fu}}{\text{software}} \\ \overset{\text{Fu}}{\text{machine}} \end{array} \right\} \left\{ \begin{array}{l} \text{type} \\ \text{version} \end{array} \right\}$

▷ Name or version of implementation, operating system, or hardware, respectively.

$(\overset{\text{Fu}}{\text{machine-instance}})$ ▷ Computer name.

(^Fdescribe-object *foo* [*stream*])
 ▷ Send information about *foo* to *stream*. Not to be called by user.

(^Fdisassemble *function*)
 ▷ Send disassembled representation of *function* to ***standard-output***. Return NIL.

15.4 Declarations

(^Fproclaim *decl*)

(^Mdeclare *decl**)

▷ Globally make declaration(s) *decl*. *decl* can be: **declaration**, **type**, **ftype**, **inline**, **notinline**, **optimize**, or **special**. See below.

(declare *decl**)

▷ Inside certain forms, locally make declarations *decl**. *decl* can be: **dynamic-extent**, **type**, **ftype**, **ignorable**, **ignore**, **inline**, **notinline**, **optimize**, or **special**. See below.

(**declaration** *foo**)

▷ Make *foos* names of declarations.

(**dynamic-extent** *variable** (^Ofunction *function*)*)

▷ Declare lifetime of *variables* and/or *functions* to end when control leaves enclosing block.

(**[type]** *type variable**)

(**ftype** *type function**)

▷ Declare *variables* or *functions* to be of *type*.

(**{ignorable}** **{ignore}** (^{var}₀*function function*)*)

▷ Suppress warnings about used/unused bindings.

(**inline** *function**)

(**notinline** *function**)

▷ Tell compiler to integrate/not to integrate, respectively, called *functions* into the calling routine.

(**optimize** **{** **compilation-speed**(**compilation-speed** *n*₀)
debug(**debug** *n*₀)
safety(**safety** *n*₀)
space(**space** *n*₀)
speed(**speed** *n*₀)
})

▷ Tell compiler how to optimize. *n* = 0 means unimportant, *n* = 1 is neutral, *n* = 3 means important.

(**special** *var**) ▷ Declare *vars* to be dynamic.

16 External Environment

(^Fget-internal-real-time)

(^Fget-internal-run-time)

▷ Current time, or computing time, respectively, in clock ticks.

^{CO}internal-time-units-per-second

▷ Number of clock ticks per second.

(^Fencode-universal-time *sec min hour date month year* [*zone*_{current}])

(^Fget-universal-time)

▷ Seconds from 1900-01-01, 00:00, ignoring leap seconds.

(^Fdecode-universal-time *universal-time* [*time-zone*_{current}])

(^Fget-decoded-time)

▷ Return second, minute, hour, date, month, year, day, daylight-p, and zone.

(^Froom **{NIL:default[T]}**)

▷ Print information about internal storage management.

(^Fatom *foo*) ▷ Return T if *foo* is not a **cons**.

(^Ftailp *foo list*) ▷ Return T if *foo* is a tail of *list*.

(^Fmember *foo list* **{** **{:test function**_{#'eq}
:test-not function
:key function
})

▷ Return tail of *list* starting with its first element matching *foo*. Return NIL if there is no such element.

(^Fmember-if ^Fmember-if-not *test list* [*:key function*])

▷ Return tail of *list* starting with its first element satisfying *test*. Return NIL if there is no such element.

(^Fsubsetp *list-a list-b* **{** **{:test function**_{#'eq}
:test-not function
:key function
})

▷ Return T if *list-a* is a subset of *list-b*.

4.2 Lists

(^Fcons *foo bar*) ▷ Return new cons (*foo . bar*).

(^Flist *foo**) ▷ Return list of foos.

(^Flist* *foo+*)

▷ Return list of *foos* with last *foo* becoming cdr of last cons. Return foo if only one *foo* given.

(^Fmake-list *num* [*:initial-element* *foo*_{nil}])

▷ New list with *num* elements set to *foo*.

(^Flist-length *list*) ▷ Length of list; NIL for circular *list*.

(^Fcar *list*)

▷ Car of list or NIL if *list* is NIL. **setfable**.

(^Fcdr *list*)

(^Frest *list*) ▷ Cdr of list or NIL if *list* is NIL. **setfable**.

(^Fnthcdr *n list*) ▷ Return tail of list after calling ^Fcdr *n* times.

(^Ffirst_{second}_{third}_{fourth}_{fifth}_{sixth}..._{ninth}_{tenth} *list*)

▷ Return nth element of list if any, or NIL otherwise. **setfable**.

(^Fnth *n list*) ▷ Zero-indexed nth element of list. **setfable**.

(^FcXr *list*)

▷ With *X* being one to four as and **ds** representing ^Fcars and ^Fcdrs, e.g. (^Fcadr *bar*) is equivalent to (^Fcar (^Fcdr *bar*)). **setfable**.

(^Flast *list* [*num*₁]) ▷ Return list of last num conses of *list*.

(^Fbutlast *list* [*num*₁]) ^Fnbutlast *list*) ▷ list excluding last *num* conses.

(^Frplaca ^Frplacd *cons object*)

▷ Replace car, or cdr, respectively, of cons with *object*.

(^Fldiff *list foo*)

▷ If *foo* is a tail of *list*, return preceding part of list. Otherwise return list.

(^Fadjoin *foo list* **{** **{:test function**_{#'eq}
:test-not function
:key function
})

▷ Return list if *foo* is already member of *list*. If not, return (^Fcons *foo list*).

(^Mpop *place*)

▷ Set *place* to (^Fcdr *place*), return (^Fcar *place*).

(^Mpush *foo place*)

▷ Set *place* to (^Fcons *foo place*).

^M(pushnew *foo* *place* $\left\{ \begin{array}{l} \text{:test } \textit{function} \textit{\#'eq} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\}$)

▷ Set *place* to (adjoin *foo* *place*).

^{Fu}(append [*proper-list** *foo*_{NIL}])

^{Fu}(nconc [*non-circular-list** *foo*_{NIL}])

▷ Return concatenated list or, with only one argument, *foo*. *foo* can be of any type.

^{Fu}(revappend *list* *foo*)

^{Fu}(nreconc *list* *foo*)

▷ Return concatenated list after reversing order in *list*.

$\left\{ \begin{array}{l} \text{mapcar} \\ \text{maplist} \end{array} \right\}$ *function list*⁺)

▷ Return list of return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*.

$\left\{ \begin{array}{l} \text{mapcan} \\ \text{mapcon} \end{array} \right\}$ *function list*⁺)

▷ Return list of concatenated return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should return a list.

$\left\{ \begin{array}{l} \text{mapc} \\ \text{mapl} \end{array} \right\}$ *function list*⁺)

▷ Return first list after successively applying *function* to corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should have some side effects.

^{Fu}(copy-list *list*) ▷ Return copy of *list* with shared elements.

4.3 Association Lists

^{Fu}(pairlis *keys values* [*alist*_{NIL}])

▷ Prepend to *alist* an association list made from lists *keys* and *values*.

^{Fu}(acons *key value* *alist*)

▷ Return *alist* with a (*key* . *value*) pair added.

$\left\{ \begin{array}{l} \text{assoc} \\ \text{rassoc} \end{array} \right\}$ *foo alist* $\left\{ \begin{array}{l} \text{:test } \textit{test} \textit{\#'eq} \\ \text{:test-not } \textit{test} \\ \text{:key } \textit{function} \end{array} \right\}$)

$\left\{ \begin{array}{l} \text{assoc-if[-not]} \\ \text{rassoc-if[-not]} \end{array} \right\}$ *test alist* [*key function*])

▷ First cons whose car, or cdr, respectively, satisfies *test*.

^{Fu}(copy-alist *alist*) ▷ Return copy of *alist*.

4.4 Trees

^{Fu}(tree-equal *foo bar* $\left\{ \begin{array}{l} \text{:test } \textit{test} \textit{\#'eq} \\ \text{:test-not } \textit{test} \end{array} \right\}$)

▷ Return T if trees *foo* and *bar* have same shape and leaves satisfying *test*.

$\left\{ \begin{array}{l} \text{subst} \\ \text{nsubst} \end{array} \right\}$ *new old tree* $\left\{ \begin{array}{l} \text{:test } \textit{function} \textit{\#'eq} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\}$)

▷ Make copy of tree with each subtree or leaf matching *old* replaced by *new*.

$\left\{ \begin{array}{l} \text{subst-if[-not]} \\ \text{nsubst-if[-not]} \end{array} \right\}$ *new test tree* [*key function*])

▷ Make copy of tree with each subtree or leaf satisfying *test* replaced by *new*.

^{Fu}(macro-function *symbol* [*environment*])
^{Fu}(compiler-macro-function $\left\{ \begin{array}{l} \textit{name} \\ \text{(setf } \textit{name}) \end{array} \right\}$ [*environment*])

▷ Return specified macro function, or compiler macro function, respectively, if any. Return NIL otherwise. **setfable**.

^{Fu}(eval *arg*)

▷ Return values of value of arg evaluated in global environment.

15.3 REPL and Debugging

^{var} $\left\{ \begin{array}{l} \text{+} \\ \text{*} \\ \text{/} \end{array} \right\}$ $\left\{ \begin{array}{l} \text{+} \\ \text{*} \\ \text{/} \end{array} \right\}$ $\left\{ \begin{array}{l} \text{+} \\ \text{*} \\ \text{/} \end{array} \right\}$ $\left\{ \begin{array}{l} \text{+} \\ \text{*} \\ \text{/} \end{array} \right\}$

▷ Last, penultimate, or antepenultimate form evaluated in the REPL, or their respective primary value, or a list of their respective values.

^{var} --

▷ Form currently being evaluated by the REPL.

^{Fu}(apropos *string* [*package*_{NIL}])

▷ Print interned symbols containing *string*.

^{Fu}(apropos-list *string* [*package*_{NIL}])

▷ List of interned symbols containing *string*.

^{Fu}(dribble [*path*])

▷ Save a record of interactive session to file at *path*. Without *path*, close that file.

^{Fu}(ed [*file-or-function*_{NIL}]) ▷ Invoke editor if possible.

$\left\{ \begin{array}{l} \text{macroexpand-1} \\ \text{macroexpand} \end{array} \right\}$ *form* [*environment*_{NIL}])

▷ Return macro expansion, once or entirely, respectively, of *form* and T if *form* was a macro form. Return *form* and NIL otherwise.

^{var}*macroexpand-hook*

▷ Function of arguments expansion function, macro form, and environment called by ^{Fu}macroexpand-1 to generate macro expansions.

^M(trace $\left\{ \begin{array}{l} \textit{function} \\ \text{(setf } \textit{function}) \end{array} \right\}$ *)

▷ Cause *functions* to be traced. With no arguments, return list of traced functions.

^M(untrace $\left\{ \begin{array}{l} \textit{function} \\ \text{(setf } \textit{function}) \end{array} \right\}$ *)

▷ Stop *functions*, or each currently traced function, from being traced.

^{var}*trace-output*

▷ Stream ^Mtrace and ^Mtime print their output on.

^M(step *form*)

▷ Step through evaluation of *form*. Return values of form.

^{Fu}(break [*control arg**])

▷ Jump directly into debugger; return NIL. See p. 38, ^{Fu}format, for *control* and *args*.

^M(time *form*)

▷ Evaluate *forms* and print timing information to ^{var}*trace-output*. Return values of form.

^{Fu}(inspect *foo*) ▷ Interactively give information about *foo*.

^{Fu}(describe *foo* [*stream* ^{var}*standard-outputs*])

▷ Send information about *foo* to *stream*.

15.2 Compilation

$(^{Fu} \text{compile } \left\{ \begin{array}{l} \text{NIL definition} \\ \text{\{name\} [definition]} \\ \text{\{setf name\}} \end{array} \right\})$

▷ Return compiled function or replace *name*'s function definition with the compiled function. Return T in case of warnings or errors, and T in case of warnings or errors excluding style warnings.

$(^{Fu} \text{compile-file } file \left\{ \begin{array}{l} \text{:output-file } out\text{-path} \\ \text{:verbose } bool \text{\{*\text{compile-verbose}\}} \\ \text{:print } bool \text{\{*\text{compile-print}\}} \\ \text{:external-format } file\text{-format} \text{\{default\}} \end{array} \right\})$

▷ Write compiled contents of *file* to *out-path*. Return true output path or NIL, T in case of warnings or errors, T in case of warnings or errors excluding style warnings.

$(^{Fu} \text{compile-file-pathname } file \text{[:output-file } path] \text{[other-keyargs]})$

▷ Pathname compile-file writes to if invoked with the same arguments.

$(^{Fu} \text{load } path \left\{ \begin{array}{l} \text{:verbose } bool \text{\{*\text{load-verbose}\}} \\ \text{:print } bool \text{\{*\text{load-print}\}} \\ \text{:if-does-not-exist } bool \text{\{nil\}} \\ \text{:external-format } file\text{-format} \text{\{default\}} \end{array} \right\})$

▷ Load source file or compiled file into Lisp environment. Return T if successful.

$\left. \begin{array}{l} \text{*\text{compile-file}\} \\ \text{*\text{load}} \end{array} \right\} \left\{ \begin{array}{l} \text{pathname} \text{\{*\text{nil}\}} \\ \text{truname} \text{\{*\text{nil}\}} \end{array} \right\}$

▷ Input file used by compile-file/by load.

$\left. \begin{array}{l} \text{*\text{compile}\} \\ \text{*\text{load}} \end{array} \right\} \left\{ \begin{array}{l} \text{:print}\} \\ \text{:verbose}\} \end{array} \right\}$

▷ Defaults used by compile-file/by load.

$(^{sO} \text{eval-when } \left(\left\{ \begin{array}{l} \text{\{:\text{compile-toplevel}\} \text{compile}\} \\ \text{\{:\text{load-toplevel}\} \text{load}\} \\ \text{\{:\text{execute}\} \text{eval}\} \end{array} \right\} \right) \text{form}^P)$

▷ Return values of *forms* if eval-when is in the top-level of a file being compiled, in the top-level of a compiled file being loaded, or anywhere, respectively. Return NIL if *forms* are not evaluated. (compile, load and eval deprecated.)

$(^{sO} \text{locally } (\widehat{\text{declare } decl}^*) \text{form}^P)$

▷ Evaluate *forms* in a lexical environment with declarations *decl* in effect. Return values of forms.

$(^M \text{with-compilation-unit } ([:\text{override } bool \text{\{nil\}}]) \text{form}^P)$

▷ Return values of forms. Warnings deferred by the compiler until end of compilation are deferred until the end of evaluation of *forms*.

$(^{sO} \text{load-time-value } form \text{[read-only} \text{\{nil\}}])$

▷ Evaluate *form* at compile time and treat its value as literal at run time.

$(^{sO} \text{quote } \widehat{foo})$ ▷ Return unevaluated foo.

$(^F \text{make-load-form } foo \text{[environment]})$

▷ Its methods are to return a creation form which on evaluation at load time returns an object equivalent to *foo*, and an optional initialization form which on evaluation performs some initialization of the object.

$(^{Fu} \text{make-load-form-saving-slots } foo \left\{ \begin{array}{l} \text{:slot-names } slots \text{\{all local slots\}} \\ \text{:environment } environment \end{array} \right\})$

▷ Return a creation form and an initialization form which on evaluation construct an object equivalent to *foo* with *slots* initialized with the corresponding values from *foo*.

$\left\{ \begin{array}{l} \text{\{*\text{sublis } association\text{-list } tree\}} \\ \text{\{*\text{nsublis } association\text{-list } \widetilde{tree}\}} \end{array} \right\} \left\{ \begin{array}{l} \text{\{:\text{test } function \text{\{#\text{=}\}}\}} \\ \text{\{:\text{test-not } function\}} \\ \text{\{:\text{key } function\}} \end{array} \right\}$

▷ Make copy of *tree* with each subtree or leaf matching a key in *association-list* replaced by that key's value.

$(^{Fu} \text{copy-tree } tree)$ ▷ Copy of tree with same shape and leaves.

4.5 Sets

$\left\{ \begin{array}{l} \text{\{*\text{intersection}\}} \\ \text{\{*\text{set-difference}\}} \\ \text{\{*\text{union}\}} \\ \text{\{*\text{set-exclusive-or}\}} \\ \text{\{*\text{intersection}\}} \\ \text{\{*\text{nset-difference}\}} \\ \text{\{*\text{union}\}} \\ \text{\{*\text{nset-exclusive-or}\}} \end{array} \right\} \left\{ \begin{array}{l} a \ b \\ \widetilde{a} \ b \\ \widetilde{a} \ \widetilde{b} \end{array} \right\} \left\{ \begin{array}{l} \text{\{:\text{test } function \text{\{#\text{=}\}}\}} \\ \text{\{:\text{test-not } function\}} \\ \text{\{:\text{key } function\}} \end{array} \right\}$

▷ Return $a \cap b$, $a \setminus b$, $a \cup b$, or $a \triangle b$, respectively, of lists *a* and *b*.

5 Arrays

5.1 Predicates

$(^{Fu} \text{arrayp } foo)$

$(^{Fu} \text{vectorp } foo)$

$(^{Fu} \text{simple-vector-p } foo)$ ▷ T if *foo* is of indicated type.

$(^{Fu} \text{bit-vector-p } foo)$

$(^{Fu} \text{simple-bit-vector-p } foo)$

$(^{Fu} \text{adjustable-array-p } array)$

$(^{Fu} \text{array-has-fill-pointer-p } array)$

▷ T if *array* is adjustable/has a fill pointer, respectively.

$(^{Fu} \text{array-in-bounds-p } array \text{[subscripts]})$

▷ Return T if *subscripts* are in *array*'s bounds.

5.2 Array Functions

$\left\{ \begin{array}{l} \text{\{*\text{make-array } dimension\text{-sizes } [:\text{adjustable } bool \text{\{nil\}}]\}} \\ \text{\{*\text{adjust-array } \widetilde{array} \text{ dimension\text{-sizes}} \}} \end{array} \right\}$

$\left\{ \begin{array}{l} \text{\{:\text{element-type } type \text{\{nil\}}\}} \\ \text{\{:\text{fill-pointer } \{num\} \text{\{bool\}} \text{\{nil\}}\}} \\ \text{\{:\text{initial-element } obj\}} \\ \text{\{:\text{initial-contents } sequence\}} \\ \text{\{:\text{displaced-to } array \text{\{nil\}} [:\text{displaced-index-offset } i \text{\{nil\}}]\}} \end{array} \right\}$

▷ Return fresh, or readjust, respectively, vector or array.

$(^{Fu} \text{aref } array \text{[subscripts]})$

▷ Return array element pointed to by *subscripts*. setfable.

$(^{Fu} \text{row-major-aref } array \ i)$

▷ Return *i*th element of *array* in row-major order. setfable.

$(^{Fu} \text{array-row-major-index } array \text{[subscripts]})$

▷ Index in row-major order of the element denoted by *subscripts*.

$(^{Fu} \text{array-dimensions } array)$

▷ List containing the lengths of *array*'s dimensions.

$(^{Fu} \text{array-dimension } array \ i)$

▷ Length of *i*th dimension of *array*.

$(^{Fu} \text{array-total-size } array)$ ▷ Number of elements in *array*.

$(^{Fu} \text{array-rank } array)$ ▷ Number of dimensions of *array*.

$(^{Fu} \text{array-displacement } array)$ ▷ Target array and offset.

^{Fu}(**bit** *bit-array* [*subscripts*])
^{Fu}(**sbit** *simple-bit-array* [*subscripts*])
 ▷ Return element of *bit-array* or of *simple-bit-array*. **setf**-able.

^{Fu}(**bit-not** *bit-array* [*result-bit-array*])
 ▷ Return result of bitwise negation of *bit-array*. If *result-bit-array* is T, put result in *bit-array*; if it is NIL, make a new array for result.

^{Fu}**bit-eqv**
^{Fu}**bit-and**
^{Fu}**bit-andc1**
^{Fu}**bit-andc2**
^{Fu}**bit-nand**
^{Fu}**bit-ior**
^{Fu}**bit-orc1**
^{Fu}**bit-orc2**
^{Fu}**bit-xor**
^{Fu}**bit-nor**

bit-array-a bit-array-b [*result-bit-array*])

▷ Return result of bitwise logical operations (cf. operations of **boole**, p. 5) on *bit-array-a* and *bit-array-b*. If *result-bit-array* is T, put result in *bit-array-a*; if it is NIL, make a new array for result.

^{co}**array-rank-limit** ▷ Upper bound of array rank; ≥ 8 .

^{co}**array-dimension-limit**
 ▷ Upper bound of an array dimension; ≥ 1024 .

^{co}**array-total-size-limit** ▷ Upper bound of array size; ≥ 1024 .

5.3 Vector Functions

Vectors can as well be manipulated by sequence functions; see section 6.

^{Fu}(**vector** *foo**) ▷ Return fresh simple vector of *foos*.

^{Fu}(**svref** *vector* *i*) ▷ Return element *i* of simple *vector*. **setf**-able.

^{Fu}(**vector-push** *foo* *vector*)
 ▷ Return **NIL** if *vector*'s fill pointer equals size of *vector*. Otherwise replace element of *vector* pointed to by fill pointer with *foo*; then increment fill pointer.

^{Fu}(**vector-push-extend** *foo* *vector* [*num*])
 ▷ Replace element of *vector* pointed to by fill pointer with *foo*, then increment fill pointer. Extend *vector*'s size by \geq *num* if necessary.

^{Fu}(**vector-pop** *vector*)
 ▷ Return element of *vector* its fillpointer points to after decrementation.

^{Fu}(**fill-pointer** *vector*) ▷ Fill pointer of *vector*. **setf**-able.

6 Sequences

6.1 Sequence Predicates

^{Fu}**every**
^{Fu}**notevery** } *test sequence*⁺
 ▷ Return **NIL** or **T**, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns **NIL**.

^{Fu}**some**
^{Fu}**notany** } *test sequence*⁺
 ▷ Return value of *test* or **NIL**, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns non-**NIL**.

^{Fu}(**require** *module* [*paths*])
 ▷ If not in ^{var}***modules***, try *paths* to load *module* from. Signal **error** if unsuccessful. Deprecated.

^{Fu}(**provide** *module*)
 ▷ If not already there, add *module* to ^{var}***modules***. Deprecated.

^{var}***modules*** ▷ List of names of loaded modules.

14.3 Symbols

A **symbol** has the attributes *name*, home **package**, property list, and optionally value (of global constant or variable *name*) and function (**function**, macro, or special operator *name*).

^{Fu}(**make-symbol** *name*)
 ▷ Make fresh, uninterned symbol *name*.

^{Fu}(**gensym** [*s*])
 ▷ Return fresh, uninterned symbol **#:s***n* with *n* from ^{var}***gensym-counter***. Increment ^{var}***gensym-counter***.

^{Fu}(**gentemp** [*prefix*] [*package* ^{var}***package***])
 ▷ Intern fresh symbol in *package*. Deprecated.

^{Fu}(**copy-symbol** *symbol* [*props*])
 ▷ Return uninterned copy of *symbol*. If *props* is T, give copy the same value, function and property list.

^{Fu}(**symbol-name** *symbol*)
^{Fu}(**symbol-package** *symbol*)
^{Fu}(**symbol-plist** *symbol*)
^{Fu}(**symbol-value** *symbol*)
^{Fu}(**symbol-function** *symbol*)
 ▷ Name, package, property list, value, or function, respectively, of *symbol*. **setf**-able.

^F**documentation**
^F(**setf documentation**) *new-doc* } *foo* { 'variable' | 'function' | 'compiler-macro' | 'method-combination' | 'structure' | 'type' | 'setf|T }
 ▷ Get/set documentation string of *foo* of given type.

^{co}**t**
 ▷ Truth; the supertype of every type including **t**; the superclass of every class except **t**; ^{var}***terminal-io***.

^{co}**nil**()
 ▷ Falsity; the empty list; the empty type, subtype of every type; ^{var}***standard-input***; ^{var}***standard-output***; the global environment.

14.4 Standard Packages

common-lisp|cl
 ▷ Exports the defined names of Common Lisp except for those in the **keyword** package.

common-lisp-user|cl-user
 ▷ Current package after startup; uses package **common-lisp**.

keyword
 ▷ Contains symbols which are defined to be of type **keyword**.

15 Compiler

15.1 Predicates

^{Fu}(**special-operator-p** *foo*) ▷ **T** if *foo* is a special operator.

^{Fu}(**compiled-function-p** *foo*)
 ▷ **T** if *foo* is of type **compiled-function**.

(^Min-package *foo*) ▷ Make package *foo* current.

{^{Fu}use-package
^{Fu}unuse-package} *other-packages* [*package* ^{var}*package*]
▷ Make exported symbols of *other-packages* available in *package*, or remove them from *package*, respectively. Return T.

(^{Fu}package-use-list *package*)

(^{Fu}package-used-by-list *package*)

▷ List of other packages used by/using *package*.

(^{Fu}delete-package *package*)

▷ Delete *package*. Return T if successful.

^{var}*package* common-lisp-user ▷ The current package.

(^{Fu}list-all-packages) ▷ List of registered packages.

(^{Fu}package-name *package*) ▷ Name of *package*.

(^{Fu}package-nicknames *package*) ▷ List of nicknames of *package*.

(^{Fu}find-package *name*) ▷ Package with *name* (case-sensitive).

(^{Fu}find-all-symbols *foo*)

▷ List of symbols *foo* from all registered packages.

{^{Fu}intern
^{Fu}find-symbol} *foo* [*package* ^{var}*package*]

▷ Intern or find, respectively, symbol *foo* in *package*. Second return value is one of :internal, :external, or :inherited (or NIL if intern created a fresh symbol).

(^{Fu}unintern *symbol* [*package* ^{var}*package*])

▷ Remove *symbol* from *package*, return T on success.

{^{Fu}import
^{Fu}shadowing-import} *symbols* [*package* ^{var}*package*]

▷ Make *symbols* internal to *package*. Return T. In case of a name conflict signal correctable **package-error** or shadow the old symbol, respectively.

(^{Fu}shadow *symbols* [*package* ^{var}*package*])

▷ Make *symbols* of *package* shadow any otherwise accessible, equally named symbols from other packages. Return T.

(^{Fu}package-shadowing-symbols *package*)

▷ List of symbols of *package* that shadow any otherwise accessible, equally named symbols from other packages.

(^{Fu}export *symbols* [*package* ^{var}*package*])

▷ Make *symbols* external to *package*. Return T.

(^{Fu}unexport *symbols* [*package* ^{var}*package*])

▷ Revert *symbols* to internal status. Return T.

{^Mdo-symbols
^Mdo-external-symbols} (^{var}[*package* ^{var}*package*] [*result* NIL])
{^Mdo-all-symbols (^{var}[*result* NIL])

(^{declare} *decl**)* {^{tag}
^{form}}*

▷ Evaluate ^{tag}*body*-like body with *var* successively bound to every symbol from *package*, to every external symbol from *package*, or to every symbol from all registered packages, respectively. Return values of *result*. Implicitly, the whole form is a ^{block} named NIL.

(^Mwith-package-iterator (*foo packages* [:internal|:external|:inherited])

(^{declare} *decl**)* *form*^R)

▷ Return values of *forms*. In *forms*, successive invocations of (*foo*) return: T if a symbol is returned; a symbol from *packages*; accessibility (:internal, :external, or :inherited); and the package the symbol belongs to.

(^{Fu}mismatch *sequence-a sequence-b* {
:from-end *bool* NIL
:test *function* #'eq
:test-not *function*
:start1 *start-a* 0
:start2 *start-b* 0
:end1 *end-a* NIL
:end2 *end-b* NIL
:key *function*

▷ Return position in *sequence-a* where *sequence-a* and *sequence-b* begin to mismatch. Return NIL if they match entirely.

6.2 Sequence Functions

(^{Fu}make-sequence *sequence-type* *size* [:initial-element *foo*])

▷ Make sequence of *sequence-type* with *size* elements.

(^{Fu}concatenate *type sequence**)

▷ Return concatenated sequence of *type*.

(^{Fu}merge *type sequence-a sequence-b test* [:key *function* NIL])

▷ Return interleaved sequence of *type*. Merged sequence will be sorted if both *sequence-a* and *sequence-b* are sorted.

(^{Fu}fill *sequence* *foo* {
:start *start* 0
:end *end* NIL

▷ Return sequence after setting elements between *start* and *end* to *foo*.

(^{Fu}length *sequence*)

▷ Return length of *sequence* (being value of fill pointer if applicable).

(^{Fu}count *foo* *sequence* {
:from-end *bool* NIL
:test *function* #'eq
:test-not *function*
:start *start* 0
:end *end* NIL
:key *function*

▷ Return number of elements in *sequence* which match *foo*.

{^{Fu}count-if
^{Fu}count-if-not} *test* *sequence* {
:from-end *bool* NIL
:start *start* 0
:end *end* NIL
:key *function*

▷ Return number of elements in *sequence* which satisfy *test*.

(^{Fu}elt *sequence* *index*)

▷ Return element of *sequence* pointed to by zero-indexed *index*. **setfable**.

(^{Fu}subseq *sequence* *start* [*end* NIL])

▷ Return subsequence of *sequence* between *start* and *end*. **setfable**.

{^{Fu}sort
^{Fu}stable-sort} *sequence* *test* [:key *function*])

▷ Return sequence sorted. Order of elements considered equal is not guaranteed/retained, respectively.

(^{Fu}reverse *sequence*)

(^{Fu}reverse *sequence*)

▷ Return sequence in reverse order.

{^{Fu}find
^{Fu}position} *foo* *sequence* {
:from-end *bool* NIL
:test *function* #'eq
:test-not *test*
:start *start* 0
:end *end* NIL
:key *function*

▷ Return first element in *sequence* which matches *foo*, or its position relative to the begin of *sequence*, respectively.

$\left. \begin{array}{l} \text{Fu find-if} \\ \text{Fu find-if-not} \\ \text{Fu position-if} \\ \text{Fu position-if-not} \end{array} \right\} \text{test sequence}$
 $\left. \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:start start}_{\square} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\}$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

$\text{Fu search } \text{sequence-a } \text{sequence-b}$
 $\left. \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:test function}_{\text{#'=eq}} \\ \text{:test-not function} \\ \text{:start1 start-a}_{\square} \\ \text{:start2 start-b}_{\square} \\ \text{:end1 end-a}_{\text{NIL}} \\ \text{:end2 end-b}_{\text{NIL}} \\ \text{:key function} \end{array} \right\}$

▷ Search *sequence-b* for a subsequence matching *sequence-a*. Return position in *sequence-b*, or NIL.

$\left. \begin{array}{l} \text{Fu remove-foo } \text{sequence} \\ \text{Fu delete-foo } \text{sequence} \end{array} \right\}$
 $\left. \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:test function}_{\text{#'=eq}} \\ \text{:test-not function} \\ \text{:start start}_{\square} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \\ \text{:count count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* without elements matching *foo*.

$\left. \begin{array}{l} \text{Fu remove-if} \\ \text{Fu remove-if-not} \\ \text{Fu delete-if} \\ \text{Fu delete-if-not} \end{array} \right\} \text{test sequence}$
 $\left. \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:start start}_{\square} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \\ \text{:count count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) elements satisfying *test* removed.

$\left. \begin{array}{l} \text{Fu remove-duplicates } \text{sequence} \\ \text{Fu delete-duplicates } \text{sequence} \end{array} \right\}$
 $\left. \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:test function}_{\text{#'=eq}} \\ \text{:test-not function} \\ \text{:start start}_{\square} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\}$

▷ Make copy of *sequence* without duplicates.

$\left. \begin{array}{l} \text{Fu substitute } \text{new old } \text{sequence} \\ \text{Fu nsubstitute } \text{new old } \text{sequence} \end{array} \right\}$
 $\left. \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:test function}_{\text{#'=eq}} \\ \text{:test-not function} \\ \text{:start start}_{\square} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \\ \text{:count count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) *olds* replaced by *new*.

$\left. \begin{array}{l} \text{Fu substitute-if} \\ \text{Fu substitute-if-not} \\ \text{Fu nsubstitute-if} \\ \text{Fu nsubstitute-if-not} \end{array} \right\} \text{new test sequence}$
 $\left. \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:start start}_{\square} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \\ \text{:count count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) elements satisfying *test* replaced by *new*.

$\text{Fu replace } \text{sequence-a } \text{sequence-b}$
 $\left. \begin{array}{l} \text{:start1 start-a}_{\square} \\ \text{:start2 start-b}_{\square} \\ \text{:end1 end-a}_{\text{NIL}} \\ \text{:end2 end-b}_{\text{NIL}} \end{array} \right\}$

▷ Replace elements of *sequence-a* with elements of *sequence-b*.

$\text{Fu map } \text{type function } \text{sequence}^+$

▷ Apply *function* successively to corresponding elements of the *sequences*. Return values as a sequence of *type*. If *type* is NIL, return NIL.

$\text{Fu logical-pathname-translations } \text{logical-host}$

▷ List of (*from-wildcard to-wildcard*) translations for *logical-host*. setfable.

$\text{Fu load-logical-pathname-translations } \text{logical-host}$

▷ Load *logical-host*'s translations. Return NIL if already loaded; return T if successful.

$\text{Fu translate-logical-pathname } \text{pathname}$

▷ Physical pathname corresponding to (possibly logical) *pathname*.

$\text{Fu probe-file } \text{file}$
 $\text{Fu truename } \text{file}$

▷ Canonical name of *file*. If *file* does not exist, return NIL/signal file-error, respectively.

$\text{Fu file-write-date } \text{file}$

▷ Time at which *file* was last written.

$\text{Fu file-author } \text{file}$

▷ Return name of *file* owner.

$\text{Fu file-length } \text{stream}$

▷ Return length of *stream*.

$\text{Fu rename-file } \text{foo } \text{bar}$

▷ Rename file *foo* to *bar*. Unspecified components of path *bar* default to those of *foo*. Return new pathname, old physical file name, and new physical file name.

$\text{Fu delete-file } \text{file}$

▷ Delete *file*. Return T.

$\text{Fu directory } \text{path}$

▷ List of pathnames matching *path*.

$\text{Fu ensure-directories-exist } \text{path } [\text{:verbose } \text{bool}]$

▷ Create parts of *path* if necessary. Second return value is T if something has been created.

14 Packages and Symbols

14.1 Predicates

$\text{Fu symbolp } \text{foo}$
 $\text{Fu packagep } \text{foo}$

▷ T if *foo* is of indicated type.

$\text{Fu keywordp } \text{foo}$

14.2 Packages

$\text{bar} | \text{keyword:bar}$

▷ Keyword, evaluates to *bar*.

package:symbol

▷ Exported *symbol* of *package*.

package::symbol

▷ Possibly unexported *symbol* of *package*.

$\text{Fu defpackage } \text{foo}$
 $\left. \begin{array}{l} \text{:nicknames } \text{nick}^* \\ \text{:documentation } \text{string} \\ \text{:intern } \text{interned-symbol}^* \\ \text{:use } \text{used-package}^* \\ \text{:import-from } \text{pkg } \text{imported-symbol}^* \\ \text{:shadowing-import-from } \text{pkg } \text{shd-symbol}^* \\ \text{:shadow } \text{shd-symbol}^* \\ \text{:export } \text{exported-symbol}^* \\ \text{:size } \text{int} \end{array} \right\}$

▷ Create or modify package *foo* with *interned-symbols*, *symbols* from *used-packages*, *imported-symbols*, and *shd-symbols*. Add *shd-symbols* to *foo*'s shadowing list.

$\text{Fu make-package } \text{foo}$
 $\left. \begin{array}{l} \text{:nicknames } \text{nick}^* \\ \text{:use } \text{used-package}^* \end{array} \right\}$

▷ Create package *foo*.

$\text{Fu rename-package } \text{package } \text{new-name } [\text{new-nicknames}_{\text{NIL}}]$

▷ Rename *package*. Return renamed package.

13.7 Pathnames and Files

^{Fu}(make-pathname

```

{
  :host {host|NIL|:unspecific}
  :device {device|NIL|:unspecific}
  :directory {
    {directory|wild|NIL|:unspecific}
    {
      (:absolute
       :relative)
      {
        directory
        :wild
        :wild-inferiors
        :up
        :back
      }
    }
  }
  :name {file-name|wild|NIL|:unspecific}
  :type {file-type|wild|NIL|:unspecific}
  :version {:newest|version|wild|NIL|:unspecific}
  :defaults pathhost from *default-pathname-defaults*
  :case {:local|:common|:local}
}

```

▷ Construct pathname. For **:case** **:local**, leave case of components unchanged. For **:case** **:common**, leave mixed-case components unchanged; convert all-uppercase components into local customary case; do the opposite with all-lowercase components.

```

{
  Fupathname-host
  Fupathname-device
  Fupathname-directory
  Fupathname-name
  Fupathname-type
  Fupathname-version path
} path [:case {
  :local
  :common
  :local
}]

```

▷ Return pathname component.

```

Fu(parse-namestring foo [host [default-pathnamehost from *default-pathname-defaults*
  {
    :start start0
    :end end1
    :junk-allowed bool1
  }
]])

```

▷ Return pathname converted from string, pathname, or stream *foo*; and position where parsing stopped.

```

Fu(merge-pathnames pathname
  [default-pathnamehost from *default-pathname-defaults*
  [default-versionnewest]])

```

▷ Return pathname after filling in missing components from default-pathname.

^{var}*default-pathname-defaults*

▷ Pathname to use if one is needed and none supplied.

^{Fu}(user-homedir-pathname [host]) ▷ User's home directory.

```

Fu(enough-namestring path [root-pathhost from *default-pathname-defaults*])

```

▷ Return minimal path string to sufficiently describe *path* relative to root-path.

```

Fu(namestring path)
Fu(file-namestring path)
Fu(directory-namestring path)
Fu(host-namestring path)

```

▷ Return string representing full pathname; name, type, and version; directory name; or host name, respectively, of *path*.

```

Fu(translate-pathname path wildcard-path-a wildcard-path-b)

```

▷ Translate *path* from wildcard-path-a into wildcard-path-b. Return new path.

^{Fu}(pathname path) ▷ Pathname of *path*.

```

Fu(logical-pathname logical-path)

```

▷ Logical pathname of *logical-path*. Logical pathnames are represented as all-uppercase #P"[host:][:]{dir}*}+];}*
{name}*}[.]{type}*}+]{LISP}{version}*|newest|NEWEST}]"

```

Fu(map-into result-sequence function sequence*)

```

▷ Store into result-sequence successively values of *function* applied to corresponding elements of the *sequences*.

```

Fu(reduce function sequence
  {
    :initial-value foo1
    :from-end bool1
    :start start0
    :end end1
    :key function
  }
)

```

▷ Starting with the first two elements of *sequence*, apply *function* successively to its last return value together with the next element of *sequence*. Return last value of function.

```

Fu(copy-seq sequence)

```

▷ Copy of sequence with shared elements.

7 Hash Tables

Key-value storage similar to hash tables can as well be achieved using association lists and property lists; see pages 10 and 17.

```

Fu(hash-table-p foo) ▷ Return T if foo is of type hash-table.

```

```

Fu(make-hash-table
  {
    :test {eq|eql|equal|equalp|/=|eql}
    :size int
    :rehash-size num
    :rehash-threshold num
  }
)

```

▷ Make a hash table.

```

Fu(gethash key hash-table [default1])

```

▷ Return object with *key* if any or default otherwise; and T if found, NIL otherwise. **setfable**.

```

Fu(hash-table-count hash-table)

```

▷ Number of entries in *hash-table*.

```

Fu(remhash key hash-table)

```

▷ Remove from *hash-table* entry with *key* and return T if it existed. Return NIL otherwise.

```

Fu(clrhash hash-table) ▷ Empty hash-table.

```

```

Fu(maphash function hash-table)

```

▷ Iterate over *hash-table* calling *function* on key and value. Return NIL.

```

M(with-hash-table-iterator (foo hash-table) (declare decl*)* formP*)

```

▷ Return values of forms. In *forms*, invocations of (*foo*) return: T if an entry is returned; its key; its value.

```

Fu(hash-table-test hash-table)

```

▷ Test function used in *hash-table*.

```

Fu(hash-table-size hash-table)
Fu(hash-table-rehash-size hash-table)
Fu(hash-table-rehash-threshold hash-table)

```

▷ Current size, rehash-size, or rehash-threshold, respectively, as used in **make-hash-table**.

```

Fu(sxhash foo)

```

▷ Hash code unique for any argument ^{Fu}**equal** *foo*.

8 Structures

(^Mdefstruct

```

foo
{
  {
    :conc-name
    {
      (:conc-name [slot-prefix foo-])
    }
    :constructor
    {
      (:constructor [maker MAKE-foo] [(ord-λ*)])
    }
    :copier
    {
      (:copier [copier COPY-foo])
    }
    (:include struct {
      slot
      {
        (:type sl-type)
        (:read-only b)
      }
    }*)
    {
      (:type {
        list
        {
          vector
          {
            (vector type)
          }
        }
      })
      (:named
       {
         (:initial-offset n)
       })
    }
    {
      (:print-object [o-printer])
      (:print-function [f-printer])
    }
    :predicate
    {
      (:predicate [p-name foo-p])
    }
  }
  slot
  {
    (slot [init {
      (:type slot-type)
      (:read-only bool)
    }])
  }*)
}
[doc]

```

▷ Define structure *foo* together with functions *MAKE-foo*, *COPY-foo* and *foo-P*; and **setfable** accessors *foo-slot*. Instances are of class *foo* or, if **defstruct** option **:type** is given, of the specified type. They can be created by (*MAKE-foo* {**:slot value**}*) or, if *ord-λ* (see p. 18) is given, by (*maker arg** {**:key value**}*). In the latter case, *args* and **:keys** correspond to the positional and keyword parameters defined in *ord-λ* whose *vars* in turn correspond to *slots*. **:print-object**/**:print-function** generate a **print-object** method for an instance *bar* of *foo* calling (*o-printer bar stream*) or (*f-printer bar stream print-level*), respectively. If **:type** without **:named** is given, no *foo-P* is created.

(^{Fu}copy-structure *structure*)

▷ Return copy of structure with shared slot values.

9 Control Structure

9.1 Predicates

(^{Fu}eq *foo bar*) ▷ T if *foo* and *bar* are identical.

(^{Fu}eql *foo bar*)

▷ T if *foo* and *bar* are identical, or the same **character**, or **numbers** of the same type and value.

(^{Fu}equal *foo bar*)

▷ T if *foo* and *bar* are ^{Fu}**eql**, or are equivalent **pathnames**, or are **conses** with ^{Fu}**equal** cars and cdrs, or are **strings** or **bit-vectors** with **eql** elements below their fill pointers.

(^{Fu}equalp *foo bar*)

▷ T if *foo* and *bar* are identical; or are the same **character** ignoring case; or are **numbers** of the same value ignoring type; or are equivalent **pathnames**; or are **conses** or **arrays** of the same shape with ^{Fu}**equalp** elements; or are structures of the same type with ^{Fu}**equalp** elements; or are **hash-tables** of the same size with the same ^{Fu}**test** function, the same keys in terms of **test** function, and **equalp** elements.

(^{Fu}not *foo*) ▷ T if *foo* is **NIL**; **NIL** otherwise.

(^{Fu}boundp *symbol*) ▷ T if *symbol* is a special variable.

(^{Fu}file-string-length *stream foo*)

▷ Length *foo* would have in *stream*.

(^{Fu}listen [*stream* ^{var}*standard-input*])

▷ T if there is a character in input *stream*.

(^{Fu}clear-input [*stream* ^{var}*standard-input*])

▷ Clear input from *stream*, return **NIL**.

{
 (^{Fu}clear-output)
 (^{Fu}force-output) [*stream* ^{var}*standard-output*]
 (^{Fu}finish-output)
}

▷ End output to *stream* and return **NIL** immediately, after initiating flushing of buffers, or after flushing of buffers, respectively.

(^{Fu}close *stream* [**:abort** bool NIL])

▷ Close *stream*. Return T if *stream* had been open. If **:abort** is T, delete associated file.

(^Mwith-open-file (*stream path open-arg**) (**declare** decl*)* *form*^{P*})

▷ Use **open** with *open-args* to temporarily create *stream* to *path*; return values of forms.

(^Mwith-open-stream (*foo stream*) (**declare** decl*)* *form*^{P*})

▷ Evaluate *forms* with *foo* locally bound to *stream*. Return values of forms.

(^Mwith-input-from-string (*foo string* {
 (:index index)
 (:start start 0)
 (:end end NIL)
}) (**declare**

decl*)* *form*^{P*})

▷ Evaluate *forms* with *foo* locally bound to input **string-stream** from *string*. Return values of forms; store next reading position into *index*.

(^Mwith-output-to-string (*foo* [*string* NIL] [**:element-type** type character])

(**declare** decl*)* *form*^{P*})

▷ Evaluate *forms* with *foo* locally bound to an output **string-stream**. Append output to *string* and return values of forms if *string* is given. Return string containing output otherwise.

(^{Fu}stream-external-format *stream*)

▷ External file format designator.

^{var}***terminal-io***

▷ Bidirectional stream to user terminal.

^{var}***standard-input***

^{var}***standard-output***

^{var}***error-output***

▷ Standard input stream, standard output stream, or standard error output stream, respectively.

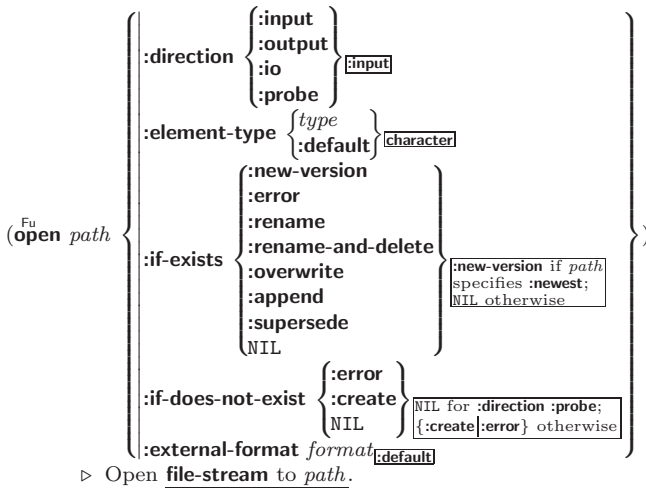

^{var}***debug-io***

^{var}***query-io***

▷ Bidirectional streams for debugging and user interaction.

- [*prefix* {,*prefix*}*] [:] [**@**] / [*package* :[:cl-user]] *function* /
 - ▷ **Call Function.** Call all-uppercase *package::function* with the arguments *stream*, *format-argument*, *colon-p*, *at-sign-p* and *prefixes* for printing *format-argument*.
- [:] [**@**] **W**
 - ▷ **Write.** Print argument of any type obeying every printer control variable. With *:*, pretty-print. With **@**, print without limits on length or depth.
- {**V**|#}
 - ▷ In place of the comma-separated prefix parameters: use next argument or number of remaining unprocessed arguments, respectively.

13.6 Streams

- (^{Fu}make-concatenated-stream *input-stream**)
- (^{Fu}make-broadcast-stream *output-stream**)
- (^{Fu}make-two-way-stream *input-stream-part* *output-stream-part*)
- (^{Fu}make-echo-stream *from-input-stream* *to-output-stream*)
- (^{Fu}make-synonym-stream *variable-bound-to-stream*)
 - ▷ Return stream of indicated type.
- (^{Fu}make-string-input-stream *string* [*start*₀ [*end*_{NIL}]])
 - ▷ Return a string-stream supplying the characters from *string*.
- (^{Fu}make-string-output-stream [:element-type *type*_[:character]])
 - ▷ Return a string-stream accepting characters (available via ^{Fu}get-output-stream-string).
- (^{Fu}concatenated-stream-streams *concatenated-stream*)
- (^{Fu}broadcast-stream-streams *broadcast-stream*)
 - ▷ Return list of streams *concatenated-stream* still has to read from/*broadcast-stream* is broadcasting to.
- (^{Fu}two-way-stream-input-stream *two-way-stream*)
- (^{Fu}two-way-stream-output-stream *two-way-stream*)
- (^{Fu}echo-stream-input-stream *echo-stream*)
- (^{Fu}echo-stream-output-stream *echo-stream*)
 - ▷ Return source stream or sink stream of *two-way-stream*/*echo-stream*, respectively.
- (^{Fu}synonym-stream-symbol *synonym-stream*)
 - ▷ Return symbol of *synonym-stream*.
- (^{Fu}get-output-stream-string *string-stream*)
 - ▷ Clear and return as a string characters on *string-stream*.
- (^{Fu}file-position *stream* [{ :start
:end
:position }])
 - ▷ Return position within stream, or set it to position and return T on success.

- (^{Fu}constantp *foo* [*environment*_{NIL}])
 - ▷ T if *foo* is a constant form.
- (^{Fu}functionp *foo*)
 - ▷ T if *foo* is of type **function**.
- (^{Fu}fboundp { *foo*
(**setf** *foo*) })
 - ▷ T if *foo* is a global function or macro.

9.2 Variables

- { (^Mdefconstant
^Mdefparameter) } *foo* *form* [*doc*]
 - ▷ Assign value of *form* to global constant/dynamic variable foo.
- (^Mdefvar *foo* [*form* [*doc*]])
 - ▷ Unless bound already, assign value of *form* to dynamic variable foo.
- { (^Msetf
^Mpsetf) } {*place form*}*
 - ▷ Set *places* to primary values of *forms*. Return values of last *form*/NIL; work sequentially/in parallel, respectively.
- { (^{SO}setq
^Mpsetq) } {*symbol form*}*
 - ▷ Set *symbols* to primary values of *forms*. Return value of last *form*/NIL; work sequentially/in parallel, respectively.
- (^{Fu}set *symbol* *foo*)
 - ▷ Set *symbol*'s value cell to foo. Deprecated.
- (^Mmultiple-value-setq *vars* *form*)
 - ▷ Set elements of *vars* to the values of *form*. Return *form*'s primary value.
- (^Mshiftf *place*+ *foo*)
 - ▷ Store value of *foo* in rightmost *place* shifting values of *places* left, returning first place.
- (^Mrotatef *place**)
 - ▷ Rotate values of *places* left, old first becoming new last *place*'s value. Return NIL.
- (^{Fu}makunbound *foo*)
 - ▷ Delete special variable foo if any.
- (^{Fu}get *symbol* *key* [*default*_{NIL}])
- (^{Fu}getf *place* *key* [*default*_{NIL}])
 - ▷ First entry *key* from property list stored in *symbol*/in *place*, respectively, or default if there is no *key*. **setfable**.
- (^{Fu}get-properties *property-list* *keys*)
 - ▷ Return key and value of first entry from *property-list* matching a key from *keys*, and tail of *property-list* starting with that key. Return NIL, NIL, and NIL if there was no matching key in *property-list*.₂ ₃
- (^{Fu}remprop *symbol* *key*)
- (^Mremf *place* *key*)
 - ▷ Remove first entry *key* from property list stored in *symbol*/in *place*, respectively. Return T if *key* was there, or NIL otherwise.

9.3 Functions

Below, ordinary lambda list (*ord-λ**) has the form

(*var** [**&optional** {(*var* [*init*_{TT}] [*supplied-p*])}]*) [**&rest** *var*]

[**&key** {(*var* {(*key* *var*)} [*init*_{TT}] [*supplied-p*])}]*) [**&allow-other-keys**]

[**&aux** {(*var* [*init*_{TT}])}]*)].

supplied-p is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

{^M**defun** {*foo* (*ord-λ**)
{^M**lambda** (*ord-λ**)
*form**}} (**declare** *decl**)^{*} [*doc*]

▷ Define a function named *foo* or (**setf** *foo*), or an anonymous function, respectively, which applies *forms* to *ord-λs*. For **defun**, *forms* are enclosed in an implicit **block** named *foo*.

{^{FO}**let** [*labels*] (({*foo* (*ord-λ**)
{^M**lambda** (*ord-λ**)
*form**}} (**declare** *local-decl**)^{*}
[*doc*] *local-form**))*) (**declare** *decl**)^{*} *form**)

▷ Evaluate *forms* with locally defined functions *foo*. Globally defined functions of the same name are shadowed. Each *foo* is also the name of an implicit **block** around its corresponding *local-form**. Only for **labels**, functions *foo* are visible inside *local-forms*. Return values of forms.

{^{FO}**function** {^M**lambda** *form**}}

▷ Return lexically innermost function named *foo* or a lexical closure of the **lambda** expression.

{^{FU}**apply** {*function*
{**setf** *function*}} *arg* args*)

▷ Values of *function* called with *args* and the list elements of *args*. **setfable** if *function* is one of **aref**, **bit**, and **sbit**.

{^{FU}**funcall** *function* *arg**) ▷ Values of *function* called with *args*.

{^{FO}**multiple-value-call** *function* *form**)

▷ Call *function* with all the values of each *form* as its arguments. Return values returned by function.

{^{FU}**values-list** *list*) ▷ Return elements of list.

{^{FU}**values** *foo**)

▷ Return as multiple values the primary values of the *foos*. **setfable**.

{^{FU}**multiple-value-list** *form*) ▷ List of the values of form.

{^M**nth-value** *n* *form*)

▷ Zero-indexed nth return value of *form*.

{^{FU}**complement** *function*)

▷ Return new function with same arguments and same side effects as *function*, but with complementary truth value.

{^{FU}**constantly** *foo*)

▷ Function of any number of arguments returning *foo*.

{^{FU}**identity** *foo*) ▷ Return foo.

{^{FU}**function-lambda-expression** *function*)

▷ If available, return lambda expression of *function*, NIL if *function* was defined in an environment without bindings, and name of *function*.

{^{FU}**fdefinition** {*foo*
{**setf** *foo*}}

▷ Definition of global function *foo*. **setfable**.

{**~P**|**~:P**|**~@P**|**~:@P**}

▷ **Plural**. If argument *eq1* print nothing, otherwise print *s*; do the same for the previous argument; if argument *eq1* print *y*, otherwise print *ies*; do the same for the previous argument, respectively.

~ [*n*_{TT}] % ▷ **Newline**. Print *n* newlines.

~ [*n*_{TT}] &

▷ **Fresh-Line**. Print *n* - 1 newlines if output stream is at the beginning of a line, or *n* newlines otherwise.

{**~|**|**~:|**|**~@|**|**~:@|**}

▷ **Conditional Newline**. Print a newline like **pprint-newline** with argument **:linear**, **:fill**, **:miser**, or **:mandatory**, respectively.

{**~:↔**|**~@↔**|**~:↔**}

▷ **Ignored Newline**. Ignore newline, or whitespace following newline, or both, respectively.

~ [*n*_{TT}] | ▷ **Page**. Print *n* page separators.

~ [*n*_{TT}] ~ ▷ **Tilde**. Print *n* tildes.

~ [*min-col*_{TT}] [, [*col-inc*_{TT}] [, [*min-pad*_{TT}] [, [*pad-char*_{TT}]]]

[:] [**@**] < [*nl-text* ~ [*spare*_{TT}] [, [*width*]]:] {*text* ~;}^{*} *text* ~>
▷ **Justification**. Justify text produced by *texts* in a field of at least *min-col* columns. With **:**, right justify; with **@**, left justify. If this would leave less than *spare* characters on the current line, output *nl-text* first.

~ [:] [**@**] < { [*prefix*_{TT}] ~;} [*per-line-prefix* ~@;] } *body* [~;

*suffix*_{TT}] ~:] [**@**] >

▷ **Logical Block**. Act like **pprint-logical-block** using *body* as **format** control string on the elements of the list argument or, with **@**, on the remaining arguments, which are extracted by **pprint-pop**. With **:**, *prefix* and *suffix* default to (and). When closed by **~:@>**, spaces in *body* are replaced with conditional newlines.

{ ~ [*n*_{TT}] | ~ [*n*_{TT}] : | ~ [*n*_{TT}] : | ~ [*n*_{TT}] : | }

▷ **Indent**. Set indentation to *n* relative to leftmost/current position.

~ [*c*_{TT}] [, [*i*_{TT}] [:] [**@**] **T**

▷ **Tabulate**. Move cursor forward to column number *c* + *ki*, *k* ≥ 0 being as small as possible. With **:**, calculate column numbers relative to the immediately enclosing section. With **@**, move to column number *c*₀ + *c* + *ki* where *c*₀ is the current position.

{ ~ [*m*_{TT}] * | ~ [*m*_{TT}] : * | ~ [*m*_{TT}] @ * }

▷ **Go-To**. Jump *m* arguments forward, or backward, or to argument *n*.

~ [*limit*] [:] [**@**] { *text* ~ }

▷ **Iteration**. Use *text* repeatedly, up to *limit*, as control string for the elements of the list argument or (with **@**) for the remaining arguments. With **:** or **@**, list elements or remaining arguments should be lists of which a new one is used at each iteration step.

~ [*x* [, [*y* [, [*z*]]]] ^

▷ **Escape Upward**. Leave immediately ~< ~>, ~< ~:~>, ~{ ~}, ~?, or the entire **format** operation. With one to three prefixes, act only if *x* = 0, *x* = *y*, or *x* ≤ *y* ≤ *z*, respectively.

~ [*i*] [:] [**@**] [{ [*text* ~;}^{*} *text* [~:; *default*] ~]

▷ **Conditional Expression**. Use the zero-indexed argument (or *ith* if given) *text* as a **format** control subclause. With **:**, use the first *text* if the argument value is NIL, or the second *text* if it is T. With **@**, do nothing for an argument value of NIL. Use the only *text* and leave the argument to be read again if it is T.

~ [**@**] ?

▷ **Recursive Processing**. Process two arguments as control string and argument list. With **@**, take one argument as control string and use then the rest of the original arguments.

(^{Fu}**copy-pprint-dispatch** [*table* ^{var}***print-pprint-dispatch***])
 ▷ Return copy of *table* or, if *table* is NIL, initial value of ^{var}***print-pprint-dispatch***.

^{var}***print-pprint-dispatch*** ▷ Current pretty print dispatch table.

13.5 Format

(^M**formatter** *control*)
 ▷ Return function of stream and a **&rest** argument applying ^{Fu}**format** to stream, *control*, and the **&rest** argument returning NIL or any excess arguments.

(^{Fu}**format** {T|NIL|*out-string*|*out-stream*} *control* *arg**)
 ▷ Output string *control* which may contain ~ directives possibly taking some *args*. Alternatively, *control* can be a function returned by **formatter** which is then applied to *out-stream* and *arg**. Output to *out-string*, *out-stream* or, if first argument is T, to ^{var}***standard-output***. Return NIL. If first argument is NIL, return formatted output.

~ [*min-col* *col*] [*col-inc* *col*] [*min-pad* *pad*] [*pad-char* *char*]]
 [:] [**@**] {**A**|**S**}
 ▷ **Aesthetic/Standard**. Print argument of any type for consumption by humans/by the reader, respectively. With :, print NIL as () rather than nil; with **@**, add *pad-chars* on the left rather than on the right.

~ [*radix* *rad*] [*width* *wid*] [*pad-char* *pad*] [*comma-char* *com*] [*comma-interval* *com*]] [:] [**@**] **R**
 ▷ **Radix**. (With one or more prefix arguments.) Print argument as number; with :, group digits *comma-interval* each; with **@**, always prepend a sign.

{~**R**|~:**R**|~**@R**|~**@:R**}
 ▷ **Roman**. Take argument as number and print it as English cardinal number, as English ordinal number, as Roman numeral, or as old Roman numeral, respectively.

~ [*width* *wid*] [*pad-char* *pad*] [*comma-char* *com*] [*comma-interval* *com*]] [:] [**@**] {**D**|**B**|**O**|**X**}
 ▷ **Decimal/Binary/Octal/Hexadecimal**. Print integer argument as number. With :, group digits *comma-interval* each; with **@**, always prepend a sign.

~ [*width* *wid*] [*dec-digits* *dec*] [*shift* *shf*] [*overflow-char* *ovf*] [*pad-char* *pad*]] [**@**] **F**
 ▷ **Fixed-Format Floating-Point**. With **@**, always prepend a sign.

~ [*width* *wid*] [*int-digits* *int*] [*exp-digits* *exp*] [*scale-factor* *scf*] [*overflow-char* *ovf*] [*pad-char* *pad*] [*exp-char* *exp*]] [**@**] {**E**|**G**}
 ▷ **Exponential/General Floating-Point**. Print argument as floating-point number with *int-digits* before decimal point and *exp-digits* in the signed exponent. With ~**G**, choose either ~**E** or ~**F**. With **@**, always prepend a sign.

~ [*dec-digits* *dec*] [*int-digits* *int*] [*width* *wid*] [*pad-char* *pad*]] [:] [**@**] **\$**
 ▷ **Monetary Floating-Point**. Print argument as fixed-format floating-point number. With :, put sign before any padding; with **@**, always prepend a sign.

{~**C**|~:**C**|~**@C**|~**@:C**}
 ▷ **Character**. Print, spell out, print in #\ syntax, or tell how to type, respectively, argument as (possibly non-printing) character.

{~(*text* ~)|~:(*text* ~)|~**@**(*text* ~)|~:**@**(*text* ~)}
 ▷ **Case-Conversion**. Convert *text* to lowercase, convert first letter of each word to uppercase, capitalize first word and convert the rest to lowercase, or convert to uppercase, respectively.

(^{Fu}**fmakunbound** *foo*)
 ▷ Remove global function or macro definition *foo*.

^{co}**call-arguments-limit**
^{co}**lambda-parameters-limit**
 ▷ Upper bound of the number of function arguments or lambda list parameters, respectively; ≥ 50.

^{co}**multiple-values-limit**
 ▷ Upper bound of the number of values a multiple value can have; ≥ 20.

9.4 Macros

Below, macro lambda list (*macro-λ**) has the form of either

$$([\&whole \textit{var}] [E] \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}^* [E])$$

$$([\&optional \left\{ \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\} [init_{\text{init}} [supplied-p]] \right\}^* [E] \left\{ \begin{array}{l} \&rest \\ \&body \end{array} \right\} \left\{ \begin{array}{l} \textit{rest-var} \\ (\textit{macro-}\lambda^*) \end{array} \right\} [E] \right\} [E])$$

$$([\&key \left\{ \left\{ \begin{array}{l} \textit{var} \\ (:key \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}) \end{array} \right\} [init_{\text{init}} [supplied-p]] \right\}^* [E] \right\} [E])$$

$$([\&allow-other-keys] [\&aux \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}^* [E]] [E])$$
 or

$$([\&whole \textit{var}] [E] \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}^* [E] [\&optional \left\{ \begin{array}{l} \textit{var} \\ (\textit{macro-}\lambda^*) \end{array} \right\}^* [E] \cdot \textit{rest-var}].$$

One toplevel [E] may be replaced by **&environment** *var*. *supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

{^M**defmacro** *foo* *form*} {^{Fu}**define-compiler-macro** *foo* *form*} (*macro-λ**) (**declare** *decl*)*
 [*doc*] *form*^{P_s}
 ▷ Define macro *foo* which on evaluation as (*foo tree*) applies expanded *forms* to arguments from *tree*, which corresponds to *tree*-shaped *macro-λ*s. *forms* are enclosed in an implicit **block** named *foo*.

(^M**define-symbol-macro** *foo* *form*)
 ▷ Define symbol macro *foo* which on evaluation evaluates expanded *form*.

(^{so}**macrolet** ((*foo* (*macro-λ**) (**declare** *local-decl*)* *doc*) *macro-form*^{P_s})* (**declare** *decl*)* *form*^{P_s})
 ▷ Evaluate *forms* with locally defined mutually invisible macros *foo* which are enclosed in implicit **blocks** of the same name.

(^{so}**symbol-macrolet** ((*foo* *expansion-form*)* (**declare** *decl*)* *form*^{P_s})*
 ▷ Evaluate *forms* with locally defined symbol macros *foo*.

(^M**defsetf** *function* *updater* [*doc*] (*setf-λ**) (*s-var*)* (**declare** *decl*)* *form*^{P_s})
 where *defsetf* lambda list (*setf-λ**) has the form
 (*var** [**&optional** $\left\{ \begin{array}{l} \textit{var} \\ (\textit{var} [init_{\text{init}} [supplied-p]]) \end{array} \right\}^*$] [**&rest** *var*] [**&key** $\left\{ \begin{array}{l} \textit{var} \\ (:key \textit{var}) \end{array} \right\} [init_{\text{init}} [supplied-p]] \right\}^*$])

[**&allow-other-keys**] [**&environment** *var*]

▷ Specify how to **setf** a place accessed by *function*.
Short form: (**setf** (*function arg**) *value-form*) is replaced by (*updater arg* value-form*); the latter must return *value-form*.
Long form: on invocation of (**setf** (*function arg**) *value-form*), *forms* must expand into code that sets the place accessed where *setf-λ* and *s-var** describe the arguments of *function* and the value(s) to be stored, respectively; and that returns the value(s) of *s-var**. *forms* are enclosed in an implicit **block** named *function*.

(^M**define-setf-expander** *function* (*macro-λ**) (**declare** *decl**)* [*doc*]
form^{F*})

▷ Specify how to **setf** a place accessed by *function*. On invocation of (**setf** (*function arg**) *value-form*), *form** must expand into code returning *arg-vars*, *args*, *newval-vars*, *set-form*, and *get-form* as described with ^{Fu}**get-setf-expansion** where the elements of macro lambda list *macro-λ** are bound to corresponding *args*. *forms* are enclosed in an implicit **block** named *function*.

(^{Fu}**get-setf-expansion** *place* [*environment* NIL])

▷ Return lists of temporary variables *arg-vars* and of corresponding *args* as given with *place*, list *newval-vars* with temporary variables corresponding to the new values, and *set-form* and *get-form* specifying in terms of *arg-vars* and *newval-vars* how to **setf** and how to read *place*.

(^M**define-modify-macro** *foo* ([**&optional**

{*var* [*init* NIL [*supplied-p*]]})* [**&rest** *var*]) *function* [*doc*])

▷ Define macro *foo* able to modify a place. On invocation of (*foo place arg**), the value of *function* applied to *place* and *args* will be stored into *place* and returned.

λambda-list-keywords

▷ List of macro lambda list keywords. These are at least:

&whole *var*

▷ Bind *var* to the entire macro call form.

&optional *var**

▷ Bind *vars* to corresponding arguments if any.

{**&rest** **&body**} *var*

▷ Bind *var* to a list of remaining arguments.

&key *var**

▷ Bind *vars* to corresponding keyword arguments.

&allow-other-keys

▷ Suppress keyword argument checking. Callers can do so using **&allow-other-keys T**.

&environment *var*

▷ Bind *var* to the lexical compilation environment.

&aux *var**

▷ Bind *vars* as in **let***.

9.5 Control Flow

(^{SO}**if** *test* *then* [*else* NIL])

▷ Return values of *then* if *test* returns T; return values of *else* otherwise.

(^M**cond** (*test then** ^{Fu}**ecsf**)*)

▷ Return the values of the first *then** whose *test* returns T; return NIL if all *tests* return NIL.

{^M**when**
^M**unless**} *test foo**

▷ Evaluate *foos* and return their values if *test* returns T or NIL, respectively. Return NIL otherwise.

(^M**pprint-pop**)

▷ Take next element off *list*. If there is no remaining tail of *list*, or ***print-length*** or ***print-circle*** indicate printing should end, send element together with an appropriate indicator to *stream*.

(^{Fu}**pprint-tab** {**:line**
:line-relative
:section
:section-relative} *c i* [*stream* ^{var}***standard-output***])

▷ Move cursor forward to column number $c + ki$, $k \geq 0$ being as small as possible.

(^{Fu}**pprint-indent** {**:block**
:current} *n* [*stream* ^{var}***standard-output***])

▷ Specify indentation for innermost logical block relative to leftmost position/to current position. Return NIL.

(^M**pprint-exit-if-list-exhausted**)

▷ If *list* is empty, terminate logical block. Return NIL otherwise.

(^{Fu}**pprint-newline** {**:linear**
:fill
:miser
:mandatory} [*stream* ^{var}***standard-output***])

▷ Print a conditional newline if *stream* is a pretty printing stream. Return NIL.

^{var.}***print-array*** ▷ If T, print arrays ^{Fu}readably.

^{var.}***print-base*** 10 ▷ Radix for printing rationals, from 2 to 36.

^{var.}***print-case*** uppercase

▷ Print symbol names all uppercase (**:uppercase**), all lowercase (**:downcase**), capitalized (**:capitalize**).

^{var.}***print-circle*** NIL

▷ If T, avoid indefinite recursion while printing circular structure.

^{var.}***print-escape*** nil

▷ If NIL, do not print escape characters and package prefixes.

^{var.}***print-gensym*** nil ▷ If T, print **#:** before uninterned symbols.

^{var.}***print-length*** NIL

^{var.}***print-level*** NIL

^{var.}***print-lines*** NIL

▷ If integer, restrict printing of objects to that number of elements per level/to that depth/to that number of lines.

^{var.}***print-miser-width***

▷ If integer and greater than the width available for printing a substructure, switch to the more compact miser style.

^{var.}***print-pretty*** ▷ If T, print pretty.

^{var.}***print-radix*** NIL ▷ If T, print rationals with a radix indicator.

^{var.}***print-readably*** NIL

▷ If T, print ^{Fu}readably or signal error **print-not-readable**.

^{var.}***print-right-margin*** NIL

▷ Right margin width in ems while pretty-printing.

(^{Fu}**set-pprint-dispatch** *type function* [*priority* 0]

[*table* ^{var}***print-pprint-dispatch***])

▷ Install entry comprising *function* of arguments *stream* and object to print; and *priority* as *type* into *table*. If *function* is NIL, remove *type* from *table*. Return NIL.

(^{Fu}**pprint-dispatch** *foo* [*table* ^{var}***print-pprint-dispatch***])

▷ Return highest priority *function* associated with type of *foo* and T if there was a matching type specifier in *table*.

(^{gF}**print-object** *object* *stream*)
 ▷ Print *object* to *stream*. Called by the Lisp printer.

(^M**print-unreadable-object** (*foo* *stream* {^{NIL}**:type** *bool* {^{NIL}**:identity** *bool*}}) *form*^{P*})
 ▷ Enclosed in #< and >, print *foo* by means of *forms* to *stream*. Return NIL.

(^{Fu}**terpri** [*stream* ^{standard-output*}])
 ▷ Output a newline to *stream*. Return NIL.

(^{Fu}**fresh-line**) [*stream* ^{standard-output*}]
 ▷ Output a newline to *stream* and return T unless *stream* is already at the start of a line.

(^{Fu}**write-char** *char* [*stream* ^{standard-output*}])
 ▷ Output *char* to *stream*.

{^{Fu}**write-string**
^{Fu}**write-line**} *string* [*stream* ^{standard-output*} {^{start} *start*_Q {^{end} *end*_{NIL}}}]]
 ▷ Write *string* to *stream* without/with a trailing newline.

(^{Fu}**write-byte** *byte* *stream*) ▷ Write *byte* to binary *stream*.

(^{Fu}**write-sequence** *sequence* *stream* {^{start} *start*_Q {^{end} *end*_{NIL}}})
 ▷ Write elements of *sequence* to binary or character *stream*.

{^{Fu}**write**
^{Fu}**write-to-string**} *foo* {
 :array *bool*
 :base *radix*
 :case {^{uppercase}
 :downcase
 :capitalize
 }
 :circle *bool*
 :escape *bool*
 :gensym *bool*
 :length {*int*|NIL}
 :level {*int*|NIL}
 :lines {*int*|NIL}
 :miser-width {*int*|NIL}
 :pprint-dispatch *dispatch-table*
 :pretty *bool*
 :radix *bool*
 :readably *bool*
 :right-margin {*int*|NIL}
 :stream *stream* ^{standard-output*}

▷ Print *foo* to *stream* and return *foo*, or print *foo* into *string*, respectively, after dynamically setting printer variables corresponding to keyword parameters (***print-bar*** becoming **:bar**). (**:stream** keyword with **write** only.)

(^{Fu}**pprint-fill** *stream* *foo* [*parenthesis*_Q [*noop*]])

(^{Fu}**pprint-tabular** *stream* *foo* [*parenthesis*_Q [*noop* [*n*_Q]])

(^{Fu}**pprint-linear** *stream* *foo* [*parenthesis*_Q [*noop*]])
 ▷ Print *foo* to *stream*. If *foo* is a list, print as many elements per line as possible; do the same in a table with a column width of *n* ems; or print either all elements on one line or each on its own line, respectively. Return NIL. Usable with ^{Fu}**format** directive `~//`.

(^M**pprint-logical-block** (*stream* *list* {^{prefix} *string* {^{per-line-prefix} *string* {^{suffix} *string*_Q}}}))

(**declare** *decl*^{*})^{P*} *form*^{P*}
 ▷ Evaluate *forms*, which should print *list*, with *stream* locally bound to a pretty printing stream which outputs to the original *stream*. If *list* is in fact not a list, it is printed by ^{Fu}**write**. Return NIL.

(^M**case** *test* ({^{key} *key* } *foo*^{P*})* [({^{otherwise} } *bar*^{P*})_{NIL}])
 ▷ Return the values of the first *foo*^{*} one of whose *keys* is *eq* *test*. Return values of bars if there is no matching *key*.

{^M**ecase**
^M**ccase**} *test* ({^{key} *key* } *foo*^{P*})*
 ▷ Return the values of the first *foo*^{*} one of whose *keys* is *eq* *test*. Signal non-correctable/correctable **type-error** and return NIL if there is no matching *key*.

(^M**and** *form*^{*Q})
 ▷ Evaluate *forms* from left to right. Immediately return NIL if one *form*'s value is NIL. Return values of last form otherwise.

(^M**or** *form*^{*Q})
 ▷ Evaluate *forms* from left to right. Immediately return primary value of first non-NIL-evaluating form, or all values if last *form* is reached. Return NIL if no *form* returns T.

(^{so}**progn** *form*^{*NIL})
 ▷ Evaluate *forms* sequentially. Return values of last form.

(^{so}**multiple-value-prog1** *form-r* *form*^{*})

(^M**prog1** *form-r* *form*^{*})

(^M**prog2** *form-a* *form-r* *form*^{*})

▷ Evaluate forms in order. Return values/primary value, respectively, of *form-r*.

{^{let}
^{let*}} ({^{name} *name* {^{value} *value*_{NIL}}}) (**declare** *decl*^{*})^{*} *form*^{P*}
 ▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return values of forms.

{^M**prog**
^{prog*}} ({^{name} *name* {^{value} *value*_{NIL}}}) (**declare** *decl*^{*})^{*} {^{tag} *tag*_{form} }^{*}
 ▷ Evaluate ^{so}**tagbody**-like body with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return NIL or explicitly **returned** values. Implicitly, the whole form is a **block** named NIL.

(^{so}**progv** *symbols* *values* *form*^{P*})

▷ Evaluate *forms* with locally established dynamic bindings of *symbols* to *values* or NIL. Return values of forms.

(^{so}**unwind-protect** *protected* *cleanup*^{*})

▷ Evaluate *protected* and then, no matter how control leaves *protected*, *cleanups*. Return values of protected.

(^M**destructuring-bind** *destruct-λ* *bar* (**declare** *decl*^{*})^{*} *form*^{P*})

▷ Evaluate *forms* with variables from tree *destruct-λ* bound to corresponding elements of tree *bar*, and return their values. *destruct-λ* resembles *macro-λ* (section 9.4), but without any **&environment** clause.

(^M**multiple-value-bind** (*var*^{*}) *values-form* (**declare** *decl*^{*})^{*} *body-form*^{P*})

▷ Evaluate *body-forms* with *vars* lexically bound to the return values of *values-form*. Return values of body-forms.

(^{so}**block** *name* *form*^{P*})

▷ Evaluate *forms* in a lexical environment, and return their values unless interrupted by **return-from**.

(^{so}**return-from** *foo* [*result*_{NIL}])

(^M**return** [*result*_{NIL}])

▷ Have nearest enclosing **block** named *foo*/named NIL, respectively, return with values of *result*.

(^{so}**tagbody** {^{tag} *tag* | *form* }^{*})

▷ Evaluate *forms* in a lexical environment. *tags* (symbols or integers)_{so} have lexical scope and dynamic extent, and are targets for **go**. Return NIL.

- $(\overset{\text{so}}{\text{go}} \widehat{\text{tag}})$
 ▷ Within the innermost possible enclosing $\overset{\text{so}}{\text{tagbody}}$, jump to a tag eq $\widehat{\text{tag}}$.
- $(\overset{\text{so}}{\text{catch}} \text{tag } \text{form}^{\text{P}^*})$
 ▷ Evaluate forms and return their values unless interrupted by throw .
- $(\overset{\text{so}}{\text{throw}} \text{tag } \text{form})$
 ▷ Have the nearest dynamically enclosing $\overset{\text{so}}{\text{catch}}$ with a tag $\overset{\text{Fu}}{\text{eq}}$ $\widehat{\text{tag}}$ return with the values of form .
- $(\overset{\text{Fu}}{\text{sleep}} n)$ ▷ Wait n seconds, return NIL.

9.6 Iteration

- $(\overset{\text{M}}{\text{do}} \overset{\text{M}}{\text{do}}^*) \left\{ \left\{ \text{var} \left[\text{start} \left[\text{step} \right] \right] \right\}^* \right\} (\text{stop } \text{result}^{\text{P}^*}) (\text{declare } \widehat{\text{decl}}^*)^*$
 $\left\{ \widehat{\text{tag}} \left| \text{form} \right. \right\}^*$
 ▷ Evaluate $\overset{\text{so}}{\text{tagbody}}$ -like body with vars successively bound according to the values of the corresponding start and step forms. vars are bound in parallel/sequentially, respectively. Stop iteration when stop is T. Return values of result^* . Implicitly, the whole form is a $\overset{\text{so}}{\text{block}}$ named NIL.
- $(\overset{\text{M}}{\text{dotimes}} (\text{var } i \left[\text{result}_{\text{NIL}} \right]) (\text{declare } \widehat{\text{decl}}^*)^* \left\{ \widehat{\text{tag}} \left| \text{form} \right. \right\}^*)$
 ▷ Evaluate $\overset{\text{so}}{\text{tagbody}}$ -like body with var successively bound to integers from 0 to $i - 1$. Upon evaluation of result , var is i . Implicitly, the whole form is a $\overset{\text{so}}{\text{block}}$ named NIL.
- $(\overset{\text{M}}{\text{dolist}} (\text{var } \text{list} \left[\text{result}_{\text{NIL}} \right]) (\text{declare } \widehat{\text{decl}}^*)^* \left\{ \widehat{\text{tag}} \left| \text{form} \right. \right\}^*)$
 ▷ Evaluate $\overset{\text{so}}{\text{tagbody}}$ -like body with var successively bound to the elements of list . Upon evaluation of result , var is NIL. Implicitly, the whole form is a $\overset{\text{so}}{\text{block}}$ named NIL.

9.7 Loop Facility

- $(\overset{\text{M}}{\text{loop}} \text{form}^*)$
 ▷ **Simple Loop.** If forms do not contain any atomic Loop Facility keywords, evaluate them forever in an implicit $\overset{\text{so}}{\text{block}}$ named NIL.
- $(\overset{\text{M}}{\text{loop}} \text{clause}^*)$
 ▷ **Loop Facility.** For Loop Facility keywords see below and Figure 1.
- $\text{named } n_{\text{NIL}}$ ▷ Give $\overset{\text{M}}{\text{loop}}$'s implicit $\overset{\text{so}}{\text{block}}$ a name.
- $\left\{ \text{with} \left\{ \left\{ \text{var-}s \left(\text{var-}s^* \right) \right\} \left[d\text{-type} \right] \left[= \text{foo} \right] \right\}^+ \right.$
 $\left. \left\{ \text{and} \left\{ \left\{ \text{var-}p \left(\text{var-}p^* \right) \right\} \left[d\text{-type} \right] \left[= \text{bar} \right] \right\}^* \right\}$
 where destructuring type specifier $d\text{-type}$ has the form
 $\left\{ \text{fixnum} \left| \text{float} \left| \text{T} \left| \text{NIL} \right. \left| \text{of-type} \left\{ \left. \text{type} \right. \right\} \right\} \right\} \right\}$
 ▷ Initialize (possibly trees of) local variables $\text{var-}s$ sequentially and $\text{var-}p$ in parallel.
- $\left\{ \left\{ \text{for} \left| \text{as} \right. \left\{ \left(\text{var-}s \right) \left[d\text{-type} \right] \right\}^+ \left\{ \text{and} \left\{ \left(\text{var-}p \right) \left[d\text{-type} \right] \right\}^* \right\} \right\}^*$
 ▷ Begin of iteration control clauses. Initialize and step (possibly trees of) local variables $\text{var-}s$ sequentially and $\text{var-}p$ in parallel. Destructuring type specifier $d\text{-type}$ as with with .
- $\left\{ \text{upfrom} \left| \text{from} \left| \text{downfrom} \right. \right\} \text{start}$
 ▷ Start stepping with start
- $\left\{ \text{upto} \left| \text{downto} \left| \text{to} \left| \text{below} \left| \text{above} \right. \right. \right\} \text{form}$
 ▷ Specify form as the end value for stepping.
- $\left\{ \text{in} \left| \text{on} \right. \right\} \text{list}$
 ▷ Bind var to successive elements/tails, respectively, of list .

- $\backslash ([\text{foo}] [\text{bar}] [\text{baz}] [\overset{\text{so}}{\text{quux}}] [\text{bing}])$
 ▷ Backquote. $\overset{\text{so}}{\text{quote}}$ foo and bing ; evaluate bar and splice the lists baz and quux into their elements. When nested, outermost commas inside the innermost backquote expression belong to this backquote.
- $\# \backslash c$ ▷ ($\overset{\text{Fu}}{\text{character}}$ "c"), the character c .
- $\# \text{B}n$; $\# \text{O}n$; n ; $\# \text{X}n$; $\# r \text{R}n$
 ▷ Integer of radix 2, 8, 10, 16, or r ; $2 \leq r \leq 36$.
- n/d ▷ The **ratio** $\frac{n}{d}$.
- $\left\{ [m].n \left[\left\{ \text{S} \left| \text{F} \left| \text{D} \left| \text{L} \left| \text{E} \right. \right\} x_{\text{EQ}} \right\} \right] \left| m \left[. [n] \right] \left\{ \text{S} \left| \text{F} \left| \text{D} \left| \text{L} \left| \text{E} \right. \right\} x \right\} \right. \right\}$
 ▷ $m.n \cdot 10^x$ as **short-float**, **single-float**, **double-float**, **long-float**, or the type from ***read-default-float-format***.
- $\# \text{C}(a b)$ ▷ ($\overset{\text{Fu}}{\text{complex}}$ $a b$), the complex number $a + bi$.
- $\# ' \text{foo}$ ▷ ($\overset{\text{so}}{\text{function}}$ foo); the function named foo .
- $\# n \text{Asequence}$ ▷ n -dimensional array.
- $\# [n](\text{foo}^*)$
 ▷ Vector of some (or n) foos filled with last foo if necessary.
- $\# [n]*b^*$
 ▷ Bit vector of some (or n) bs filled with last b if necessary.
- $\# \text{S}(\text{type } \{ \text{slot value} \}^*)$ ▷ Structure of type .
- $\# \text{Pstring}$ ▷ A pathname.
- $\# : \text{foo}$ ▷ Uninterned symbol foo .
- $\# . \text{form}$ ▷ Read-time value of form .
- $\# \overset{\text{var}}{\text{read-eval}} * \square$ ▷ If NIL, a **reader-error** is signalled at $\# .$.
- $\# \text{integer} = \text{foo}$ ▷ Give foo the label integer .
- $\# \text{integer} \#$ ▷ Object labelled integer .
- $\# <$ ▷ Have the reader signal **reader-error**.
- $\# + \text{feature when-feature}$
 $\# - \text{feature unless-feature}$
 ▷ Means when-feature if feature is T; means unless-feature if feature is NIL. feature is a symbol from ***features***, or (**{and or} feature***), or (**not feature**).
- *features***
 ▷ List of symbols denoting implementation-dependent features.
- $|c^*|; \backslash c$
 ▷ Treat arbitrary character(s) c as alphabetic preserving case.

13.4 Printer

- $\left\{ \left(\overset{\text{Fu}}{\text{prin1}} \right. \right.$
 $\left. \left(\overset{\text{Fu}}{\text{print}} \right. \right.$
 $\left. \left(\overset{\text{Fu}}{\text{pprint}} \right. \right.$
 $\left. \left(\overset{\text{Fu}}{\text{princ}} \right. \right.$
 $\left. \right\} \text{foo} \left[\text{stream}_{\text{NIL}} \left[\text{*standard-output*} \right] \right]$
 ▷ Print foo to stream $\overset{\text{Fu}}{\text{readably}}$, $\overset{\text{Fu}}{\text{readably}}$ between a newline and a space, $\overset{\text{Fu}}{\text{readably}}$ after a newline, or human-readably without any extra characters, respectively. $\overset{\text{Fu}}{\text{prin1}}$, $\overset{\text{Fu}}{\text{print}}$ and $\overset{\text{Fu}}{\text{princ}}$ return foo .
- $(\overset{\text{Fu}}{\text{prin1-to-string}} \text{foo})$
 $(\overset{\text{Fu}}{\text{princ-to-string}} \text{foo})$
 ▷ Print foo to string $\overset{\text{Fu}}{\text{readably}}$ or human-readably, respectively.

^{Fu}**read-line** [*stream* ^{var}***standard-input*** [*eof-err* **T**] [*eof-val* **NIL**] [*recursive* **T**]]
 ▷ Return a line of text from *stream* and **T** if line has been ended by end of file.

^{Fu}**read-sequence** *sequence stream* [**:start** *start* **T**] [**:end** *end* **NIL**]
 ▷ Replace elements of *sequence* between *start* and *end* with elements from binary or character *stream*. Return index of *sequence*'s first unmodified element.

^{Fu}**readtable-case** (*readtable*) **upcase**
 ▷ Case sensitivity attribute (one of **:upcase**, **:downcase**, **:preserve**, **:invert**) of *readtable*. **setfable**.

^{Fu}**copy-readtable** [*from-readtable* ^{var}***readtable*** [*to-readtable* **NIL**]]
 ▷ Return copy of *from-readtable*.

^{Fu}**set-syntax-from-char** *to-char from-char* [*to-readtable* ^{var}***readtable*** [*from-readtable* **standard-readtable**]]
 ▷ Copy syntax of *from-char* to *to-readtable*. Return **T**.

^{var}***readtable*** ▷ Current readtable.

^{var}***read-base*** **T** ▷ Radix for reading **integers** and **ratios**.

^{var}***read-default-float-format*** **single-float**
 ▷ Floating point format to use when not indicated in the number read.

^{var}***read-suppress*** **NIL**
 ▷ If **T**, reader is syntactically more tolerant.

^{Fu}**set-macro-character** *char function* [*non-term-p* **NIL**] [*rt* ^{var}***readtable***]
 ▷ Make *char* a macro character associated with *function* of stream and *char*. Return **T**.

^{Fu}**get-macro-character** *char* [*rt* ^{var}***readtable***]
 ▷ Reader macro function associated with *char*, and **T** if *char* is a non-terminating macro character.

^{Fu}**make-dispatch-macro-character** *char* [*non-term-p* **NIL**] [*rt* ^{var}***readtable***]
 ▷ Make *char* a dispatching macro character. Return **T**.

^{Fu}**set-dispatch-macro-character** *char sub-char function* [*rt* ^{var}***readtable***]
 ▷ Make *function* of stream, *n*, *sub-char* a dispatch function of *char* followed by *n*, followed by *sub-char*. Return **T**.

^{Fu}**get-dispatch-macro-character** *char sub-char* [*rt* ^{var}***readtable***]
 ▷ Dispatch function associated with *char* followed by *sub-char*.

13.3 Character Syntax

#| *multi-line-comment* **|#**
; *one-line-comment*

▷ Comments. There are stylistic conventions:

- ;;; title** ▷ Short title for a block of code.
- ;;; intro** ▷ Description before a block of code.
- ;; state** ▷ State of program or of following code.
- ;; explanation** ▷ Regarding line on which it appears.
- ;; continuation**

*foo** [*bar* **NIL**]) ▷ List of *foos* with the terminating cdr *bar*.

" ▷ Begin and end of a string.

'foo ▷ (**so** *quote foo*); *foo* unevaluated.

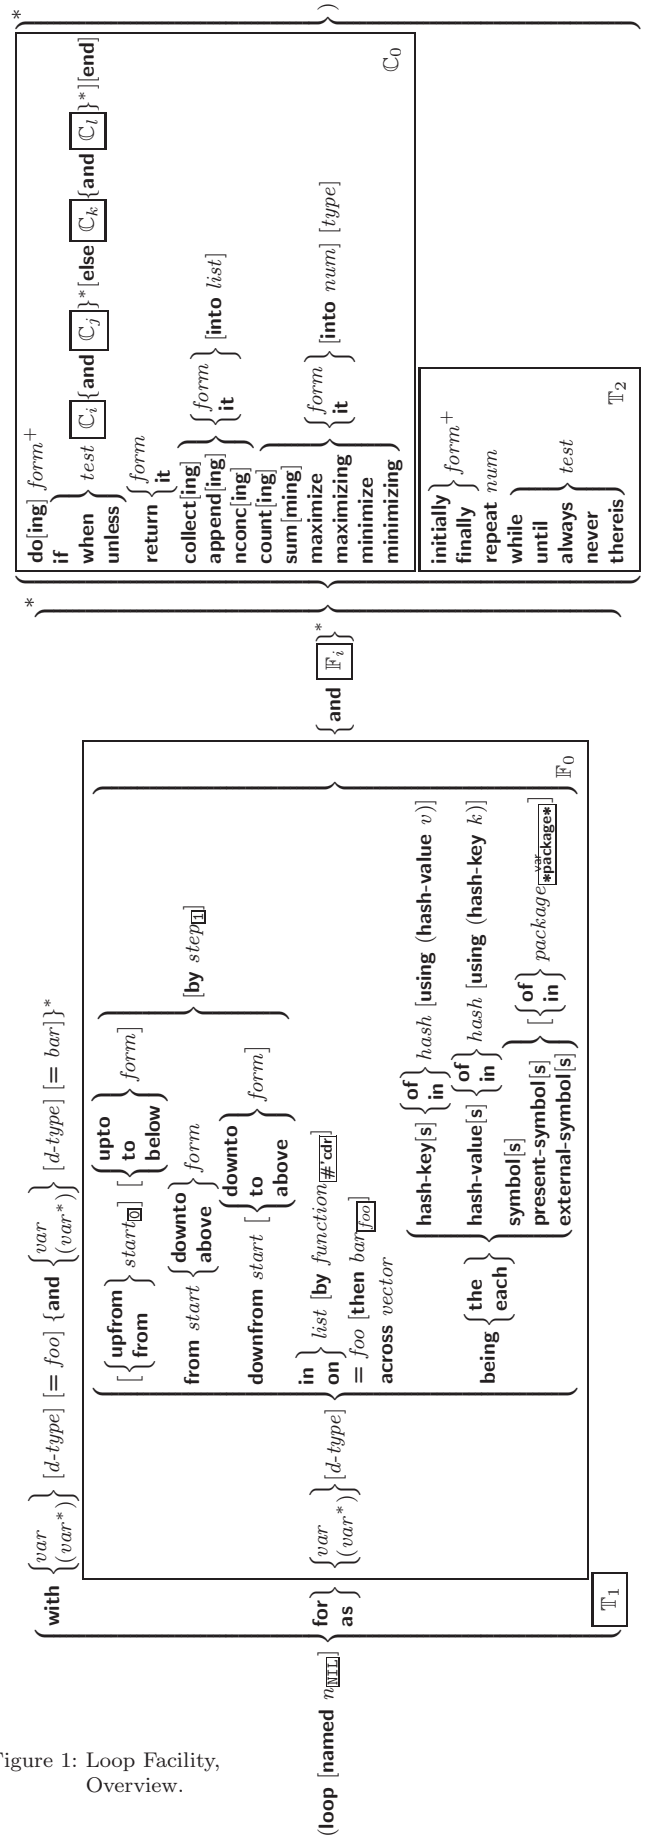

Figure 1: Loop Facility, Overview.

by {*step*|*function*}_{Fu} *cdr*
 ▷ Specify the (positive) decrement or increment or the *function* of one argument returning the next part of the list.

= *foo* [**then** *bar*]_{Fu}
 ▷ Bind *var* initially to *foo* and later to *bar*.

across *vector*
 ▷ Bind *var* to successive elements of *vector*.

being {**the**|**each**}
 ▷ Iterate over a hash table or a package.

{**hash-key**|**hash-keys**} {**of**|**in**} *hash-table* [**using** (**hash-value** *value*)]
 ▷ Bind *var* successively to the keys of *hash-table*; bind *value* to corresponding values.

{**hash-value**|**hash-values**} {**of**|**in**} *hash-table* [**using** (**hash-key** *key*)]
 ▷ Bind *var* successively to the values of *hash-table*; bind *key* to corresponding keys.

{**symbol**|**symbols**|**present-symbol**|**present-symbols**|**external-symbol**|**external-symbols**} [{**of**|**in**} *package*]_{Fu} [**packages**]
 ▷ Bind *var* successively to the accessible symbols, or the present symbols, or the external symbols respectively, of *package*.

{**do**|**doing**} *form*⁺
 ▷ Evaluate *forms* in every iteration.

{**if**|**when**|**unless**} *test i-clause* {**and** *j-clause*}^{*} [**else** *k-clause* {**and** *l-clause*}^{*}] [**end**]
 ▷ If *test* returns T, T, or NIL, respectively, evaluate *i-clause* and *j-clauses*; otherwise, evaluate *k-clause* and *l-clauses*.

it ▷ Inside *i-clause* or *k-clause*: value of *test*.

return {*form*|**it**}
 ▷ Return immediately, skipping any **finally** parts, with values of *form* or **it**.

{**collect**|**collecting**} {*form*|**it**} [**into** *list*]
 ▷ Collect values of *form* or **it** into *list*. If no *list* is given, collect into an anonymous list which is returned after termination.

{**append**|**appending**|**nconc**|**nconcing**} {*form*|**it**} [**into** *list*]
 ▷ Concatenate values of *form* or **it**, which should be lists, into *list* by the means of **append** or **nconc**, respectively. If no *list* is given, collect into an anonymous list which is returned after termination.

{**count**|**counting**} {*form*|**it**} [**into** *n*] [*type*]
 ▷ Count the number of times the value of *form* or of **it** is T. If no *n* is given, count into an anonymous variable which is returned after termination.

{**sum**|**summing**} {*form*|**it**} [**into** *sum*] [*type*]
 ▷ Calculate the sum of the primary values of *form* or of **it**. If no *sum* is given, sum into an anonymous variable which is returned after termination.

{**maximize**|**maximizing**|**minimize**|**minimizing**} {*form*|**it**} [**into** *max-min*] [*type*]
 ▷ Determine the maximum or minimum, respectively, of the primary values of *form* or of **it**. If no *max-min* is given, use an anonymous variable which is returned after termination.

{**initially**|**finally**} *form*⁺
 ▷ Evaluate *forms* before begin, or after end, respectively, of iterations.

repeat *num*
 ▷ Terminate **loop** after *num* iterations; *num* is evaluated once.

13 Input/Output

13.1 Predicates

(**stream-p** *foo*)_{Fu}
 (**pathname-p** *foo*)_{Fu} ▷ T if *foo* is of indicated type.
 (**readtable-p** *foo*)_{Fu}

(**input-stream-p** *stream*)_{Fu}
 (**output-stream-p** *stream*)_{Fu}
 (**interactive-stream-p** *stream*)_{Fu}
 (**open-stream-p** *stream*)_{Fu}
 ▷ Return T if *stream* is for input, for output, interactive, or open, respectively.

(**pathname-match-p** *path* *wildcard*)_{Fu}
 ▷ T if *path* matches *wildcard*.

(**wild-pathname-p** *path* [{**host**|**device**|**directory**|**name**|**type**|**version**|NIL}])_{Fu}
 ▷ Return T if indicated component in *path* is wildcard. (NIL indicates any component.)

13.2 Reader

{**y-or-n-p**|**yes-or-no-p**} [*control arg**]_{Fu}
 ▷ Ask user a question and return T or NIL depending on their answer. See p. 38, **format**, for *control* and *args*.

(**with-standard-io-syntax** *form*)_M *form*^{Bk}
 ▷ Evaluate *forms* with standard behaviour of reader and printer. Return values of *forms*.

{**read**|**read-preserving-whitespace**} [*stream* *var* ***standard-input***] [*eof-err*]_{Fu} [*eof-val* *recursive*]_{NIL}]]
 ▷ Read printed representation of object.

(**read-from-string** *string* [*eof-error*]_T [*eof-val*]_{NIL} [**:start** *start*]_T [**:end** *end*]_{NIL} [**:preserve-whitespace** *bool*]_{NIL}]])_{Fu}
 ▷ Return object read from string and zero-indexed position of next character.

(**read-delimited-list** *char* [*stream* *var* ***standard-input***] [*recursive*]_{NIL}])_{Fu}
 ▷ Continue reading until encountering *char*. Return list of objects read. Signal error if no *char* is found in stream.

(**read-char** [*stream* *var* ***standard-input***] [*eof-err*]_T [*eof-val*]_{NIL} [*recursive*]_{NIL}]])_{Fu}
 ▷ Return next character from *stream*.

(**read-char-no-hang** [*stream* *var* ***standard-input***] [*eof-error*]_T [*eof-val*]_{NIL} [*recursive*]_{NIL}]])_{Fu}
 ▷ Next character from *stream* or NIL if none is available.

(**peek-char** [*mode*]_{NIL} [*stream* *var* ***standard-input***] [*eof-error*]_T [*eof-val*]_{NIL} [*recursive*]_{NIL}]])_{Fu}
 ▷ Next, or if *mode* is T, next non-whitespace character, or if *mode* is a character, next instance of it, from *stream* without removing it there.

(**unread-char** *character* [*stream* *var* ***standard-input***])_{Fu}
 ▷ Put last **read-char**ed *character* back into *stream*; return NIL.

(**read-byte** [*stream* [*eof-err*]_T [*eof-val*]_{NIL}]])_{Fu}
 ▷ Read next byte from binary *stream*.

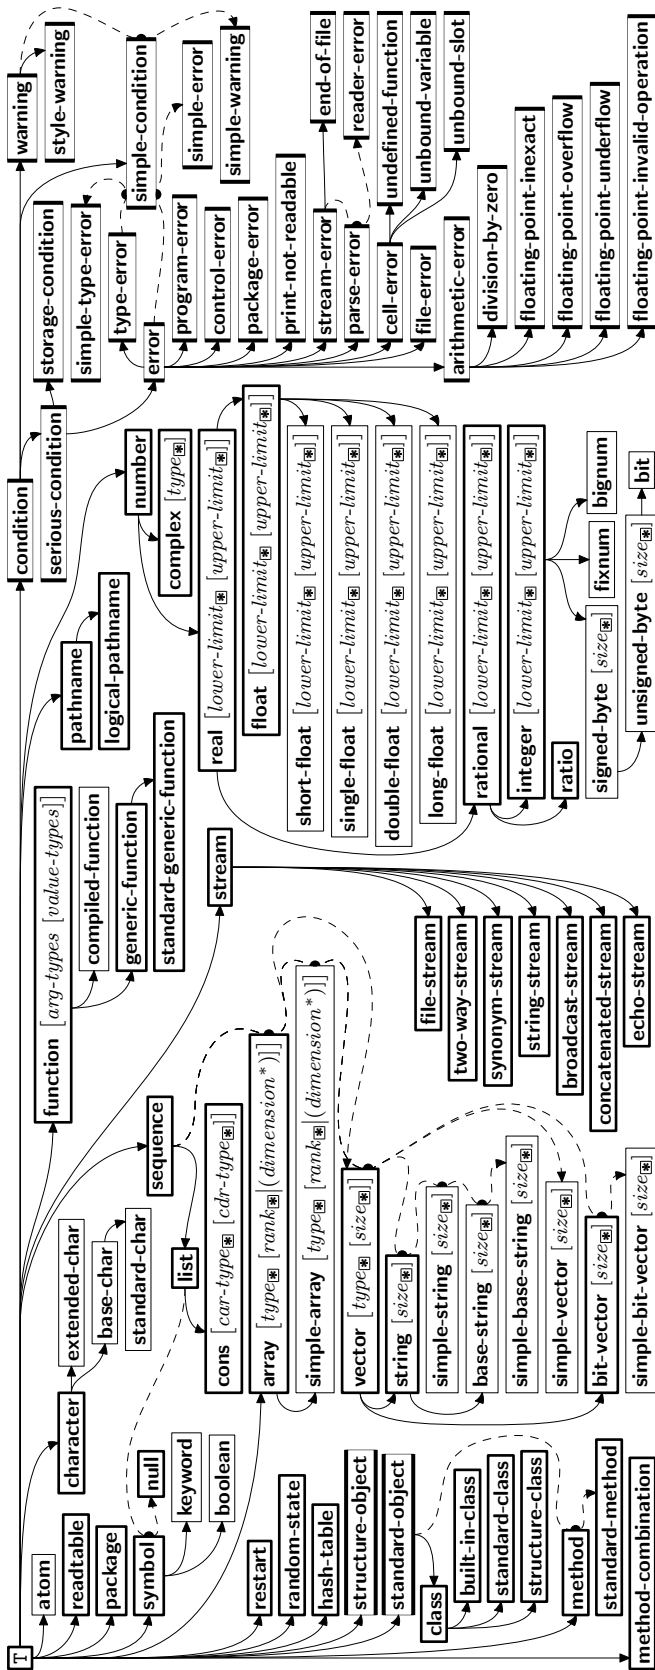

Figure 2: Precedence Order of System Classes (□), Classes (▣), Types (▢), and Condition Types (▤).

{while|until} test
 ▷ Continue iteration until *test* returns NIL or T, respectively.

{always|never} test
 ▷ Terminate **loop** returning NIL and skipping any **finally** parts as soon as *test* is NIL or T, respectively. Otherwise continue **loop** with its default return value set to T.

thereis test
 ▷ Terminate **loop** when *test* is T and return value of *test*, skipping any **finally** parts. Otherwise continue **loop** with its default return value set to NIL.

(loop-finish)
 ▷ Terminate **loop** immediately executing any **finally** clauses and returning any accumulated results.

10 CLOS

10.1 Classes

(^{FU}slot-exists-p foo bar) ▷ T if *foo* has a slot *bar*.

(^{FU}slot-boundp instance slot) ▷ T if *slot* in *instance* is bound.

(^Mdefclass foo (superclass* standard-object)

```

    (
      (slot
        (
          (:reader reader)*
          (:writer {writer {setf writer}})*
          (:accessor accessor)*
          (:allocation {instance {class [instance]}})
          (:initarg :initarg-name)*
          (:initform form)
          (:type type)
          (:documentation slot-doc)
        )
      )
      (
        (:default-initargs {name value}*)
        (:documentation class-doc)
        (:metaclass name standard-class)
      )
    )
  
```

▷ Define, as a subclass of *superclasses*, class *foo*. In a new instance *i*, a *slot*'s value defaults to *form* unless set via *:initarg-name*; it is readable via (*reader i*) or (*accessor i*), and writable via (*writer value i*) or (*setf (accessor i) value*). With *:allocation :class*, *slot* is shared by all instances of class *foo*.

(^{FU}find-class symbol [errorp] [environment])
 ▷ Return class named *symbol*. **setfable**.

(^Fmake-instance class {:*initarg* *value*}* other-keyarg*)
 ▷ Make new instance of *class*.

(^Freinitialize-instance instance {:*initarg* *value*}* other-keyarg*)
 ▷ Change local slots of *instance* according to *initargs*.

(^{FU}slot-value foo slot) ▷ Return value of *slot* in *foo*. **setfable**.

(^{FU}slot-makunbound instance slot)
 ▷ Make *slot* in *instance* unbound.

(^Mwith-slots ({slot(var slot)*} with-accessors ((var accessor)*)) instance (declare decl)* form^R*
 ▷ Return values of *forms* after evaluating them in a lexical environment with slots of *instance* visible as **setfable slots** or *vars*/with *accessors* of *instance* visible as **setfable vars**.

(^Fclass-name class) ▷ Get/set name of *class*.

((^Fsetf class-name) new-name class)

(^{FU}class-of foo) ▷ Class *foo* is a direct instance of.

(^{EF}**change-class** *instance* *new-class* *{:initarg value}* other-keyarg**)
 ▷ Change class of *instance* to *new-class*.

(^{EF}**make-instances-obsolete** *class*) ▷ Update instances of *class*.

{^{EF}**initialize-instance** (*instance*)
^{EF}**update-instance-for-different-class** *previous current* }
{:initarg value} other-keyarg**)
 ▷ Its primary method sets slots on behalf of ^{EF}**make-instance**/of ^{EF}**change-class** by means of ^{EF}**shared-initialize**.

(^{EF}**update-instance-for-redefined-class** *instances added-slots*
discarded-slots property-list *{:initarg value}* other-keyarg**)
 ▷ Its primary method sets slots on behalf of ^{EF}**make-instances-obsolete** by means of ^{EF}**shared-initialize**.

(^{EF}**allocate-instance** *class* *{:initarg value}* other-keyarg**)
 ▷ Return uninitialized *instance* of *class*. Called by ^{EF}**make-instance**.

(^{EF}**shared-initialize** *instance* *{slots}* *{:initarg value}* other-keyarg**)
 ▷ Fill *instance*'s *slots* using *initargs* and **initform** forms.

(^{EF}**slot-missing** *class object slot* *{setf slot-boundp slot-makunbound slot-value}* *[value]*)
 ▷ Called in case of attempted access to missing *slot*. Its primary method signals **error**.

(^{EF}**slot-unbound** *class instance slot*)
 ▷ Called by **slot-value** in case of unbound *slot*. Its primary method signals **unbound-slot**.

10.2 Generic Functions

(^{Fu}**next-method-p**) ▷ T if enclosing method has a next method.

(^M**defgeneric** *{foo (setf foo)}* (*required-var** *&optional* *{var}* [(var)]*) *&rest*
var) *&key* *{var}* *{(var|(:key var))}* *&allow-other-keys*)
 {
 (:argument-precedence-order *required-var*⁺)
 (:declare (optimize *arg*^{*})⁺)
 (:documentation *string*)
 (:generic-function-class *class* *standard-generic-function*)
 (:method-class *class* *standard-method*)
 (:method-combination *c-type* *standard* *c-arg*^{*})
 (:method *defmethod-args*^{*})
 }
 ▷ Define generic function *foo*. *defmethod-args* resemble those of ^M**defmethod**. For *c-type* see section 10.3.

(^{Fu}**ensure-generic-function** *{foo (setf foo)}*)
 {
 (:argument-precedence-order *required-var*⁺)
 (:declare (optimize *arg*^{*})⁺)
 (:documentation *string*)
 (:generic-function-class *class*)
 (:method-class *class*)
 (:method-combination *c-type* *c-arg*^{*})
 (:lambda-list *lambda-list*)
 (:environment *environment*)
 }
 ▷ Define or modify generic function *foo*. **generic-function-class** and **lambda-list** have to be compatible with a pre-existing generic function or with existing methods, respectively. Changes to **method-class** do not propagate to existing methods. For *c-type* see section 10.3.

(^{Fu}**simple-condition-format-control** *condition*)
 (^{Fu}**simple-condition-format-arguments** *condition*)
 ▷ Return format control or list of format arguments, respectively, of *condition*.

^{var}***break-on-signals***_{NIL}
 ▷ Condition type debugger is to be invoked on.

^{var}***debugger-hook***_{NIL}
 ▷ Function of condition and function itself. Called before debugger.

12 Types and Classes

For any class, there is always a corresponding type of the same name.

(^{Fu}**typep** *foo type* [*environment*_{NIL}]) ▷ T if *foo* is of *type*.

(^{Fu}**subtypep** *type-a type-b* [*environment*])
 ▷ Return T if *type-a* is a recognizable subtype of *type-b*, and NIL if the relationship could not be determined.

(^{SO}**the** *type form*) ▷ Declare values of form to be of *type*.

(^{Fu}**coerce** *object type*) ▷ Coerce *object* into *type*.

(^M**typecase** *foo* (*type a-form*^{P*})^{*} [(_T *otherwise*)] *b-form*_{NIL}^{P*})
 ▷ Return values of the *a-forms* whose *type* is *foo* of. Return values of *b-forms* if no *type* matches.

{^M**ctypcase**
^M**etypcase**} *foo* (*type form*^{P*})^{*}
 ▷ Return values of the forms whose *type* is *foo* of. Signal correctable/non-correctable error, respectively if no *type* matches.

(^{Fu}**type-of** *foo*) ▷ Type of *foo*.

(^M**check-type** *place type* [*string*_{{a|an} type}])
 ▷ Signal correctable **type-error** if *place* is not of *type*. Return NIL.

(^{Fu}**stream-element-type** *stream*) ▷ Return type of *stream* objects.

(^{Fu}**array-element-type** *array*) ▷ Element type *array* can hold.

(^{Fu}**upgraded-array-element-type** *type* [*environment*_{NIL}])
 ▷ Element type of most specialized array capable of holding elements of *type*.

(^M**deftype** *foo* (*macro-λ*^{*}) (*declare decl*^{*})^{*} [*doc*] *form*^{P*})
 ▷ Define type *foo* which when referenced as (*foo arg*^{*}) applies expanded *forms* to *args* returning the new type. For (*macro-λ*^{*}) see p. 19 but with default value of ***** instead of NIL. *forms* are enclosed in an implicit **block** named *foo*.

(**eql** *foo*)
 (**member** *foo*^{*}) ▷ Specifier for a type comprising *foo* or *foos*.

(**satisfies** *predicate*)
 ▷ Type specifier for all objects satisfying *predicate*.

(**mod** *n*) ▷ Type specifier for all non-negative integers < *n*.

(**not** *type*) ▷ Complement of type.

(**and** *type*^{*_N) ▷ Type specifier for intersection of *types*.}

(**or** *type*^{*_{NIL}) ▷ Type specifier for union of *types*.}

(**values** *type*^{*} [**&optional** *type*^{*} [**&rest** *other-args*]])
 ▷ Type specifier for multiple values.

***** ▷ As a type argument (cf. Figure 2): no restriction.

▷ Evaluate *form* with dynamically established restarts *foo*. Return values of *form* or, if by (^{Fu}`invoke-restart foo arg*`) one restart *foo* is called, use *string* or *report-function* (of a stream) to print a description of restart *foo* and return the values of its *restart-forms*. *arg-function* supplies appropriate *args* if *foo* is called by `invoke-restart-interactively`. If (*test-function condition*) returns **T**, *foo* is made visible under *condition*. *arg** matches (*ord-λ**); see p. 18 for the latter.

(^M`restart-bind` ((^{widehat}`restart` *restart-function*)
(`restart-function function)
(report-function function)
(test-function function))* formPk)`

▷ Return values of *forms* evaluated with *restarts* dynamically bound to *restart-functions*.

(^{Fu}`invoke-restart restart arg*`)
(^{Fu}`invoke-restart-interactively restart`)

▷ Call function associated with *restart* with arguments given or prompted for, respectively. If *restart* function returns, return its values.

(^{Fu}`compute-restarts` [*condition*])
(^{Fu}`find-restart name`)

▷ Return list of all restarts, or innermost *restart name*, respectively, out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. Return `NIL` if search is unsuccessful.

(^{Fu}`restart-name restart`) ▷ Name of *restart*.

(^{Fu}`abort` [*condition*])
(^{Fu}`muffle-warning` [*condition*])
(^{Fu}`continue` [*condition*])
(^{Fu}`store-value value` [*condition*])
(^{Fu}`use-value value` [*condition*])

▷ Transfer control to innermost applicable restart with same name (i.e. `abort`, ..., `continue` ...) out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. If no restart is found, signal **control-error** for ^{Fu}`abort` and ^{Fu}`muffle-warning`, or return `NIL` for the rest.

(^M`with-condition-restarts condition restarts formPk)`

▷ Evaluate *forms* with *restarts* dynamically associated with *condition*. Return values of *forms*.

(^{Fu}`arithmetic-error-operation condition`)
(^{Fu}`arithmetic-error-operands condition`)

▷ List of function or of its operands respectively, used in the operation which caused *condition*.

(^{Fu}`cell-error-name condition`)

▷ Name of cell which caused *condition*.

(^{Fu}`unbound-slot-instance condition`)

▷ Instance with unbound slot which caused *condition*.

(^{Fu}`print-not-readable-object condition`)

▷ The object not readably printable under *condition*.

(^{Fu}`package-error-package condition`)
(^{Fu}`file-error-pathname condition`)
(^{Fu}`stream-error-stream condition`)

▷ Package, path, or stream, respectively, which caused the *condition* of indicated type.

(^{Fu}`type-error-datum condition`)
(^{Fu}`type-error-expected-type condition`)

▷ Object which caused *condition* of type **type-error**, or its expected type, respectively.

(^M`defmethod` {*foo* {`setf foo`} } {`:before`
{`:after`
{`:around` [*primary method*]}
[*qualifier**]}
{*var* {*spec-var* {`class` } } }* }* [**&optional**
{*var* [*init* [*supplied-p*]] }* }* [**&rest var**] [**&key**
{*var* {*key var*} }* }* [*init* [*supplied-p*]] }* }* [**&allow-other-keys**]
[**&aux** {*var* [*init*]}* }*] {`(declare decl*)`* }* }* *form*^{Pk})

▷ Define new method for generic function *foo*. *spec-vars* specialize to either being of *class* or being **eq** *bar*, respectively. On invocation, *vars* and *spec-vars* of the new *method* act like parameters of a function with body *form**. *forms* are enclosed in an implicit **block** *foo*. Applicable *qualifiers* depend on the **method-combination** type; see section 10.3.

(^{EF}`add-method` [*generic-function method*])
(^{EF}`remove-method` [*generic-function method*])

▷ Add (if necessary) or remove (if any) *method* to/from *generic-function*.

(^{EF}`find-method generic-function qualifiers specializers` [*error*])

▷ Return suitable *method*, or signal **error**.

(^{EF}`compute-applicable-methods generic-function args`)

▷ List of methods suitable for *args*, most specific first.

(^{Fu}`call-next-method arg*` [*current args*])

▷ From within a method, call next method with *args*; return its values.

(^{EF}`no-applicable-method generic-function arg*`)

▷ Called on invocation of *generic-function* on *args* if there is no applicable method. Default method signals **error**.

(^{Fu}`invalid-method-error method` [*control arg**])
(^{EF}`method-combination-error` [*control arg**])

▷ Signal **error** on applicable method with invalid qualifiers, or on method combination. For *control* and *args* see **format**, p. 38.

(^{EF}`no-next-method generic-function method arg*`)

▷ Called on invocation of `call-next-method` when there is no next method. Default method signals **error**.

(^{EF}`function-keywords method`)

▷ Return list of keyword parameters of *method* and **T** if other keys are allowed.

(^{EF}`method-qualifiers method`) ▷ List of qualifiers of *method*.

10.3 Method Combination Types

standard

▷ Evaluate most specific **:around** method supplying the values of the generic function. From within this method, ^{Fu}`call-next-method` can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, call all **:before** methods, most specific first, and the most specific primary method which supplies the values of the calling ^{Fu}`call-next-method` if any, or of the generic function; and which can call less specific primary methods via ^{Fu}`call-next-method`. After its return, call all **:after** methods, least specific first.

`and`|`or`|`append`|`list`|`nconc`|`progn`|`max`|`min`|`+`

▷ Simple built-in **method-combination** types; have the same usage as the *c-types* defined by the short form of ^M`define-method-combination`.

^M(**define-method-combination** *c-type*

$$\left\{ \begin{array}{l} \text{:documentation } \widehat{string} \\ \text{:identity-with-one-argument } \text{bool}_{\text{NIL}} \\ \text{:operator } \text{operator}_{\text{c-type}} \end{array} \right\}$$

▷ **Short Form.** Define new **method-combination** *c-type*. In a generic function using *c-type*, evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, return from the calling **call-next-method** or from the generic function, respectively, the values of (*operator* (*primary-method* *gen-arg**)*), *gen-arg** being the arguments of the generic function. The *primary-methods* are ordered $\left[\begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right]$ (specified as *c-arg* in **defgeneric**). Using *c-type* as the *qualifier* in **defmethod** makes the method primary.

^M(**define-method-combination** *c-type* (*ord-λ**) ((*group*

$$\left\{ \begin{array}{l} * \\ \text{qualifier}^* [*] \\ \text{predicate} \\ \text{:description } \text{control} \\ \text{:order } \left\{ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right\} \text{most-specific-first} \\ \text{:required } \text{bool} \\ \left(\begin{array}{l} \text{:arguments } \text{method-combination-}\lambda^* \\ \text{:generic-function } \text{symbol} \\ \text{(declare } \widehat{decl}^* \text{)} \\ \widehat{doc} \end{array} \right) \text{body}^{\text{R}_e} \end{array} \right\}^*$$

▷ **Long Form.** Define new **method-combination** *c-type*. A call to a generic function using *c-type* will be equivalent to a call to the forms returned by *body** with *ord-λ** bound to *c-arg** (cf. **defgeneric**), with *symbol* bound to the generic function, with *method-combination-λ** bound to the arguments of the generic function, and with *groups* bound to lists of methods. An applicable method becomes a member of the left-most *group* whose *predicate* or *qualifiers* match. Methods can be called via **call-method**. Lambda lists (*ord-λ**) and (*method-combination-λ**) according to *ord-λ* on p. 18, the latter enhanced by an optional **&whole** argument.

^M(**call-method** $\left\{ \begin{array}{l} \widehat{method} \\ \text{(make-method } \widehat{form} \text{)} \end{array} \right\} \left[\left(\left\{ \begin{array}{l} \widehat{next-method} \\ \text{(make-method } \widehat{form} \text{)} \end{array} \right\}^* \right) \right]$)

▷ From within an effective method form, call *method* with the arguments of the generic function and with information about its *next-methods*; return its values.

11 Conditions and Errors

For standardized condition types cf. Figure 2 on page 32.

^M(**define-condition** *foo* (*parent-type** **condition**)

$$\left\{ \begin{array}{l} \text{slot} \\ \left(\begin{array}{l} \text{:reader } \text{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \text{writer} \\ \text{(setf } \text{writer} \text{)} \end{array} \right\}^* \\ \text{:accessor } \text{accessor}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right\} \text{instance} \\ \text{:initarg } \text{initarg-name}^* \\ \text{:initform } \text{form} \\ \text{:type } \text{type} \\ \text{:documentation } \text{slot-doc} \end{array} \right) \end{array} \right\}^*$$

$$\left\{ \begin{array}{l} \text{:default-initargs } \{ \text{name value}^* \} \\ \text{:documentation } \text{condition-doc} \\ \text{:report } \left\{ \begin{array}{l} \text{string} \\ \text{report-function} \end{array} \right\} \end{array} \right\}$$

▷ Define, as a subtype of *parent-types*, condition type *foo*. In a new condition, a *slot*'s value defaults to *form* unless set via *initarg-name*; it is readable via (*reader* *i*) or (*accessor* *i*), and writable via (*writer* *value* *i*) or (**setf** (*accessor* *i*) *value*). With **:allocation** **:class**, *slot* is shared by all conditions of type *foo*. A condition is reported by *string* or by *report-function* of arguments condition and stream.

^{Fu}(**make-condition** *type* $\{ \text{initarg-name value} \}^*$)

▷ Return new condition of type.

$$\left(\begin{array}{l} \text{signal}^{\text{Fu}} \\ \text{warn}^{\text{Fu}} \\ \text{error}^{\text{Fu}} \end{array} \right) \left\{ \begin{array}{l} \text{condition} \\ \text{type } \{ \text{initarg-name value} \}^* \\ \text{control } \text{arg}^* \end{array} \right\}$$

▷ Unless handled, signal as **condition**, **warning** or **error**, respectively, *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 38), **simple-condition**, **simple-warning**, or **simple-error**, respectively. From **signal** and **warn**, return **NIL**.

^{Fu}(**cerror** *continue-control* $\left\{ \begin{array}{l} \text{condition } \text{continue-arg}^* \\ \text{type } \{ \text{initarg-name value} \}^* \\ \text{control } \text{arg}^* \end{array} \right\}$)

▷ Unless handled, signal as correctable **error** *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 38), **simple-error**. In the debugger, use **format** arguments *continue-control* and *continue-args* to tag the continue option. Return **NIL**.

^M(**ignore-errors** *form*^{R_e})

▷ Return values of *forms* or, in case of **errors**, **NIL** and the condition.

^{Fu}(**invoke-debugger** *condition*)

▷ Invoke debugger with *condition*.

^M(**assert** *test* $\left[\left(\text{place}^* \right) \left\{ \begin{array}{l} \text{condition } \text{continue-arg}^* \\ \text{type } \{ \text{initarg-name value} \}^* \\ \text{control } \text{arg}^* \end{array} \right\} \right]$)

▷ If *test*, which may depend on *places*, returns **NIL**, signal as correctable **error** *condition* or a new condition of *type* or, with **format** *control* and *args* (see p. 38), **error**. When using the debugger's continue option, *places* can be altered before re-evaluation of *test*. Return **NIL**.

^M(**handler-case** *foo* (*type* ([*var*]) (**declare** \widehat{decl}^*) *condition-form*^{R_e})
 $\left[\text{:no-error } (\text{ord-}\lambda^*) \text{(declare } \widehat{decl}^* \text{)} \text{form}^{\text{R}_e} \right]$)

▷ If, on evaluation of *foo*, a condition of *type* is signalled, evaluate matching *condition-forms* with *var* bound to the condition, and return their values. Without a condition, bind *ord-λs* to values of *foo* and return values of *forms* or, without a **:no-error** clause, return values of *foo*. See p. 18 for (*ord-λ**).

^M(**handler-bind** ((*condition-type* *handler-function*)*) *form*^{R_e})

▷ Return values of *forms* after evaluating them with *condition-types* dynamically bound to their respective *handler-functions* of argument condition.

^M(**with-simple-restart** $\left\{ \begin{array}{l} \text{restart} \\ \text{NIL} \end{array} \right\}$ *control* *arg**) *form*^{R_e})

▷ Return values of *forms* unless *restart* is called during their evaluation. In this case, describe restart using **format** *control* and *args* (see p. 38) and return **NIL** and $\frac{T}{2}$.

^M(**restart-case** *form* (*foo* (*ord-λ**) $\left\{ \begin{array}{l} \text{:interactive } \text{arg-function} \\ \text{:report } \left\{ \begin{array}{l} \text{report-function} \\ \text{string}_{\text{foo}} \end{array} \right\} \\ \text{:test } \text{test-function}_{\text{foo}} \end{array} \right\}$)
 $\left(\text{declare } \widehat{decl}^* \text{ restart-form}^{\text{R}_e} \right)^*$)
