

(<sup>Fu</sup>sinh *a*)  
 (<sup>Fu</sup>cosh *a*)   ▷ sinh *a*, cosh *a*, or tanh *a*, respectively.  
 (<sup>Fu</sup>tanh *a*)

(<sup>Fu</sup>asinh *a*)  
 (<sup>Fu</sup>acosh *a*)   ▷ asinh *a*, acosh *a*, or atanh *a*, respectively.  
 (<sup>Fu</sup>atanh *a*)

(<sup>Fu</sup>cis *a*)   ▷ Return  $e^{i a} = \cos a + i \sin a$ .

(<sup>Fu</sup>conjugate *a*)   ▷ Return complex conjugate of *a*.

(<sup>Fu</sup>max *num*<sup>+</sup>)  
 (<sup>Fu</sup>min *num*<sup>+</sup>)   ▷ Greatest or least, respectively, of *nums*.

(<sup>Fu</sup>round|<sup>Fu</sup>round}  
 (<sup>Fu</sup>floor|<sup>Fu</sup>floor}  
 (<sup>Fu</sup>ceiling|<sup>Fu</sup>ceiling}  
 (<sup>Fu</sup>truncate|<sup>Fu</sup>truncate}) } *n* [*d*⌈]

▷ Return as integer or float, respectively,  $n/d$  rounded, or rounded towards  $-\infty$ ,  $+\infty$ , or 0, respectively; and remainder.

(<sup>Fu</sup>mod|<sup>Fu</sup>rem} *n* *d*)  
 ▷ Same as <sup>Fu</sup>floor or <sup>Fu</sup>truncate, respectively, but return remainder only.

(<sup>Fu</sup>random *limit* [*state*|<sup>var</sup>\*random-state\*])  
 ▷ Return non-negative random number less than *limit*, and of the same type.

(<sup>Fu</sup>make-random-state [*state*|NIL|T|⌈⌋])  
 ▷ Copy of random-state object *state* or of the current random state; or a randomly initialized fresh random state.

<sup>var</sup>\*random-state\*   ▷ Current random state.

(<sup>Fu</sup>float-sign *num-a* [*num-b*⌈])   ▷ num-b with *num-a*'s sign.

(<sup>Fu</sup>signum *n*)  
 ▷ Number of magnitude 1 representing sign or phase of *n*.

(<sup>Fu</sup>numerator *rational*)  
 (<sup>Fu</sup>denominator *rational*)  
 ▷ Numerator or denominator, respectively, of *rational*'s canonical form.

(<sup>Fu</sup>realpart *number*)  
 (<sup>Fu</sup>imagpart *number*)  
 ▷ Real part or imaginary part, respectively, of *number*.

(<sup>Fu</sup>complex *real* [*imag*⌈])   ▷ Make a complex number.

(<sup>Fu</sup>phase *number*)   ▷ Angle of *number*'s polar representation.

(<sup>Fu</sup>abs *n*)   ▷ Return |n|.

(<sup>Fu</sup>rational *real*)  
 (<sup>Fu</sup>rationalize *real*)  
 ▷ Convert *real* to rational. Assume complete/limited accuracy for *real*.

(<sup>Fu</sup>float *real* [*prototype*|0.0f⌈])  
 ▷ Convert *real* into float with type of *prototype*.

## Typographic Conventions

**name**; <sup>Fu</sup>**name**; <sup>M</sup>**name**; <sup>so</sup>**name**; <sup>gF</sup>**name**; <sup>var</sup>**\*name\***; <sup>co</sup>**name**  
 ▷ Symbol defined in Common Lisp; esp. function, macro, special operator, generic function, variable, constant.

<i>them</i>	▷ Placeholder for actual code.
<i>me</i>	▷ Literal text.
[ <i>foo</i> <u>bar</u> ]	▷ Either one <i>foo</i> or nothing; defaults to <i>bar</i> .
<i>foo</i> *; { <i>foo</i> }*	▷ Zero or more <i>foos</i> .
<i>foo</i> <sup>+</sup> ; { <i>foo</i> } <sup>+</sup>	▷ One or more <i>foos</i> .
<i>foos</i>	▷ English plural denotes a list argument.
{ <i>foo</i>   <i>bar</i>   <i>baz</i> }; $\begin{cases} \textit{foo} \\ \textit{bar} \\ \textit{baz} \end{cases}$	▷ Either <i>foo</i> , or <i>bar</i> , or <i>baz</i> .
$\left\{ \begin{array}{l} \textit{foo} \\ \textit{bar} \\ \textit{baz} \end{array} \right.$	▷ Anything from none to each of <i>foo</i> , <i>bar</i> , and <i>baz</i> .
$\widehat{\textit{foo}}$	▷ Argument <i>foo</i> is not evaluated.
$\widetilde{\textit{bar}}$	▷ Argument <i>bar</i> is possibly modified.
<i>foo</i> <sup>P</sup> *	▷ <i>foo</i> * is evaluated as in <sup>so</sup> <b>progn</b> ; see p. 21.
$\frac{\textit{foo}; \textit{bar}; \textit{baz}}{n}$	▷ Primary, secondary, and <i>n</i> th return value.
T; NIL	▷ <b>t</b> , or truth in general; and <b>nil</b> or <b>()</b> .

## 1 Numbers

### 1.1 Predicates

$(\stackrel{\text{Fu}}{=} \textit{number}^+)$   
 $(\stackrel{\text{Fu}}{=} \textit{number}^+)$   
 ▷ **T** if all *numbers*, or none, respectively, are equal in value.

$(\stackrel{\text{Fu}}{>} \textit{number}^+)$   
 $(\stackrel{\text{Fu}}{>} = \textit{number}^+)$   
 $(\stackrel{\text{Fu}}{<} \textit{number}^+)$   
 $(\stackrel{\text{Fu}}{<} = \textit{number}^+)$   
 ▷ Return **T** if *numbers* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

$(\stackrel{\text{Fu}}{\text{minusp}} \textit{a})$   
 $(\stackrel{\text{Fu}}{\text{zerop}} \textit{a})$  ▷ **T** if *a* < 0, *a* = 0, or *a* > 0, respectively.  
 $(\stackrel{\text{Fu}}{\text{plusp}} \textit{a})$

$(\stackrel{\text{Fu}}{\text{evenp}} \textit{integer})$   
 $(\stackrel{\text{Fu}}{\text{oddp}} \textit{integer})$  ▷ **T** if *integer* is even or odd, respectively.

$(\stackrel{\text{Fu}}{\text{numberp}} \textit{foo})$   
 $(\stackrel{\text{Fu}}{\text{realp}} \textit{foo})$   
 $(\stackrel{\text{Fu}}{\text{rationalp}} \textit{foo})$   
 $(\stackrel{\text{Fu}}{\text{floatp}} \textit{foo})$  ▷ **T** if *foo* is of indicated type.  
 $(\stackrel{\text{Fu}}{\text{integerp}} \textit{foo})$   
 $(\stackrel{\text{Fu}}{\text{complexp}} \textit{foo})$   
 $(\stackrel{\text{Fu}}{\text{random-state-p}} \textit{foo})$

### 1.2 Numeric Functions

$(\stackrel{\text{Fu}}{+} \textit{a} \textit{a}^*)$   
 $(\stackrel{\text{Fu}}{*} \textit{a} \textit{a}^*)$  ▷ Return  $\sum \textit{a}$  or  $\prod \textit{a}$ , respectively.

$(\stackrel{\text{Fu}}{-} \textit{a} \textit{b}^*)$   
 $(\stackrel{\text{Fu}}{/} \textit{a} \textit{b}^*)$   
 ▷ Return  $\textit{a} - \sum \textit{b}$  or  $\textit{a} / \prod \textit{b}$ , respectively. Without any *bs*, return  $-\textit{a}$  or  $1/\textit{a}$ , respectively.

$(\stackrel{\text{Fu}}{+} \textit{a})$   
 $(\stackrel{\text{Fu}}{-} \textit{a})$  ▷ Return  $\textit{a} + 1$  or  $\textit{a} - 1$ , respectively.

$(\stackrel{\text{M}}{\text{incf}} \textit{place} [\textit{delta} \square])$   
 $(\stackrel{\text{M}}{\text{decf}} \textit{place} [\textit{delta} \square])$   
 ▷ Increment or decrement the value of *place* by *delta*. Return new value.

$(\stackrel{\text{Fu}}{\text{exp}} \textit{p})$   
 $(\stackrel{\text{Fu}}{\text{expt}} \textit{b} \textit{p})$  ▷ Return  $\textit{e}^{\textit{p}}$  or  $\textit{b}^{\textit{p}}$ , respectively.

$(\stackrel{\text{Fu}}{\text{log}} \textit{a} [\textit{b}])$  ▷ Return  $\log_{\textit{b}} \textit{a}$  or, without *b*,  $\ln \textit{a}$ .

$(\stackrel{\text{Fu}}{\text{sqr}} \textit{n})$   
 $(\stackrel{\text{Fu}}{\text{isqr}} \textit{n})$  ▷  $\sqrt{\textit{n}}$  in complex or natural numbers, respectively.

$(\stackrel{\text{Fu}}{\text{lcm}} \textit{integer}^* \square)$   
 $(\stackrel{\text{Fu}}{\text{gcd}} \textit{integer}^* \square)$   
 ▷ Least common multiple or greatest common denominator, respectively, of *integers*. (**gcd**) returns 0.

<sup>co</sup>**pi** ▷ **long-float** approximation of  $\pi$ , Ludolph's number.

$(\stackrel{\text{Fu}}{\text{sin}} \textit{a})$   
 $(\stackrel{\text{Fu}}{\text{cos}} \textit{a})$  ▷  $\sin \textit{a}$ ,  $\cos \textit{a}$ , or  $\tan \textit{a}$ , respectively. (*a* in radians.)  
 $(\stackrel{\text{Fu}}{\text{tan}} \textit{a})$

$(\stackrel{\text{Fu}}{\text{asin}} \textit{a})$   
 $(\stackrel{\text{Fu}}{\text{acos}} \textit{a})$  ▷  $\arcsin \textit{a}$  or  $\arccos \textit{a}$ , respectively, in radians.

$(\stackrel{\text{Fu}}{\text{atan}} \textit{a} [\textit{b} \square])$  ▷  $\arctan \frac{\textit{a}}{\textit{b}}$  in radians.

## 3 Strings

Strings can as well be manipulated by array and sequence functions; see pages 11 and 12.

$(\text{stringp } foo)$   
 $(\text{simple-string-p } foo)$      $\triangleright$   $\underline{T}$  if  $foo$  is of indicated type.

$(\text{string=} \text{string-equal})$   $foo$   $bar$   $\left\{ \begin{array}{l} \text{:start1 } start\text{-}foo_{\underline{0}} \\ \text{:start2 } start\text{-}bar_{\underline{0}} \\ \text{:end1 } end\text{-}foo_{\underline{NIL}} \\ \text{:end2 } end\text{-}bar_{\underline{NIL}} \end{array} \right\}$   
 $\triangleright$  Return  $\underline{T}$  if subsequences of  $foo$  and  $bar$  are equal. Obey/ignore, respectively, case.

$(\text{string} \{ / = | \text{-not-equal} \}$   
 $(\text{string} \{ > | \text{-greaterp} \}$   
 $(\text{string} \{ >= | \text{-not-lessp} \}$   
 $(\text{string} \{ < | \text{-lessp} \}$   
 $(\text{string} \{ <= | \text{-not-greaterp} \})$   $foo$   $bar$   $\left\{ \begin{array}{l} \text{:start1 } start\text{-}foo_{\underline{0}} \\ \text{:start2 } start\text{-}bar_{\underline{0}} \\ \text{:end1 } end\text{-}foo_{\underline{NIL}} \\ \text{:end2 } end\text{-}bar_{\underline{NIL}} \end{array} \right\}$   
 $\triangleright$  If  $foo$  is lexicographically not equal, greater, not less, less, or not greater, respectively, then return position of first mismatching character in  $foo$ . Otherwise return  $\underline{NIL}$ . Obey/ignore, respectively, case.

$(\text{make-string } size \left\{ \begin{array}{l} \text{:initial-element } char \\ \text{:element-type } type_{\text{character}} \end{array} \right\})$   
 $\triangleright$  Return string of length  $size$ .

$(\text{string } x)$   
 $(\text{string-capitalize})$   
 $(\text{string-upcase})$   
 $(\text{string-downcase})$   $x$   $\left\{ \begin{array}{l} \text{:start } start_{\underline{0}} \\ \text{:end } end_{\underline{NIL}} \end{array} \right\}$   
 $\triangleright$  Convert  $x$  (symbol, string, or character) into a string, a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.

$(\text{nstring-capitalize})$   
 $(\text{nstring-upcase})$   
 $(\text{nstring-downcase})$   $string$   $\left\{ \begin{array}{l} \text{:start } start_{\underline{0}} \\ \text{:end } end_{\underline{NIL}} \end{array} \right\}$   
 $\triangleright$  Convert  $string$  into a string with capitalized words, an all-uppercase string, or an all-lowercase string, respectively.

$(\text{string-trim})$   
 $(\text{string-left-trim})$   
 $(\text{string-right-trim})$   $char\text{-}bag$   $string$   
 $\triangleright$  Return string with all characters in sequence  $char\text{-}bag$  removed from both ends, from the beginning, or from the end, respectively.

$(\text{char } string$   $i)$   
 $(\text{schar } string$   $i)$   
 $\triangleright$  Return zero-indexed  $i$ th character of string ignoring/obeying, respectively, fill pointer. setfable.

$(\text{parse-integer } string \left\{ \begin{array}{l} \text{:start } start_{\underline{0}} \\ \text{:end } end_{\underline{NIL}} \\ \text{:radix } int_{\underline{10}} \\ \text{:junk-allowed } bool_{\underline{NIL}} \end{array} \right\})$   
 $\triangleright$  Return integer parsed from  $string$  and index of parse end.

## 4 Conses

### 4.1 Predicates

$(\text{consp } foo)$   
 $(\text{listp } foo)$      $\triangleright$  Return  $\underline{T}$  if  $foo$  is of indicated type.

$(\text{endp } list)$   
 $(\text{null } foo)$      $\triangleright$  Return  $\underline{T}$  if  $list/foo$  is  $\underline{NIL}$ .

## 1.3 Logic Functions

Negative integers are used in two's complement representation.

$(\text{boole } operation$   $int\text{-}a$   $int\text{-}b)$   
 $\triangleright$  Return value of bitwise logical operation. operations are

$\text{boole-1}$      $\triangleright$   $int\text{-}a$ .  
 $\text{boole-2}$      $\triangleright$   $int\text{-}b$ .  
 $\text{boole-c1}$      $\triangleright$   $\neg int\text{-}a$ .  
 $\text{boole-c2}$      $\triangleright$   $\neg int\text{-}b$ .  
 $\text{boole-set}$      $\triangleright$  All bits set.  
 $\text{boole-clr}$      $\triangleright$  All bits zero.  
 $\text{boole-eqv}$      $\triangleright$   $int\text{-}a \equiv int\text{-}b$ .  
 $\text{boole-and}$      $\triangleright$   $int\text{-}a \wedge int\text{-}b$ .  
 $\text{boole-andc1}$      $\triangleright$   $\neg int\text{-}a \wedge int\text{-}b$ .  
 $\text{boole-andc2}$      $\triangleright$   $int\text{-}a \wedge \neg int\text{-}b$ .  
 $\text{boole-nand}$      $\triangleright$   $\neg(int\text{-}a \wedge int\text{-}b)$ .  
 $\text{boole-ior}$      $\triangleright$   $int\text{-}a \vee int\text{-}b$ .  
 $\text{boole-orc1}$      $\triangleright$   $\neg int\text{-}a \vee int\text{-}b$ .  
 $\text{boole-orc2}$      $\triangleright$   $int\text{-}a \vee \neg int\text{-}b$ .  
 $\text{boole-xor}$      $\triangleright$   $\neg(int\text{-}a \equiv int\text{-}b)$ .  
 $\text{boole-nor}$      $\triangleright$   $\neg(int\text{-}a \vee int\text{-}b)$ .

$(\text{lognot } integer)$      $\triangleright$   $\neg integer$ .

$(\text{logeqv } integer^*)$   
 $(\text{logand } integer^*)$   
 $\triangleright$  Return value of exclusive-nored or anded integers, respectively. Without any integer, return  $\underline{-1}$ .

$(\text{logandc1 } int\text{-}a$   $int\text{-}b)$      $\triangleright$   $\neg int\text{-}a \wedge int\text{-}b$ .

$(\text{logandc2 } int\text{-}a$   $int\text{-}b)$      $\triangleright$   $int\text{-}a \wedge \neg int\text{-}b$ .

$(\text{lognand } int\text{-}a$   $int\text{-}b)$      $\triangleright$   $\neg(int\text{-}a \wedge int\text{-}b)$ .

$(\text{logxor } integer^*)$   
 $(\text{logior } integer^*)$   
 $\triangleright$  Return value of exclusive-ored or ored integers, respectively. Without any integer, return  $\underline{0}$ .

$(\text{logorc1 } int\text{-}a$   $int\text{-}b)$      $\triangleright$   $\neg int\text{-}a \vee int\text{-}b$ .

$(\text{logorc2 } int\text{-}a$   $int\text{-}b)$      $\triangleright$   $int\text{-}a \vee \neg int\text{-}b$ .

$(\text{lognor } int\text{-}a$   $int\text{-}b)$      $\triangleright$   $\neg(int\text{-}a \vee int\text{-}b)$ .

$(\text{logbitp } i$   $integer)$   
 $\triangleright$   $\underline{T}$  if zero-indexed  $i$ th bit of integer is set.

$(\text{logtest } int\text{-}a$   $int\text{-}b)$   
 $\triangleright$  Return  $\underline{T}$  if there is any bit set in  $int\text{-}a$  which is set in  $int\text{-}b$  as well.

$(\text{logcount } int)$   
 $\triangleright$  Number of 1 bits in  $int \geq 0$ , number of 0 bits in  $int < 0$ .

## 1.4 Integer Functions

(<sup>Fu</sup>**integer-length** *integer*)

▷ Number of bits necessary to represent *integer*.

(<sup>Fu</sup>**ldb-test** *byte-spec integer*)

▷ Return T if any bit specified by *byte-spec* in *integer* is set.

(<sup>Fu</sup>**ash** *integer count*)

▷ Return copy of *integer* arithmetically shifted left by *count* adding zeros at the right, or, for *count* < 0, shifted right discarding bits.

(<sup>Fu</sup>**ldb** *byte-spec integer*)

▷ Extract byte denoted by *byte-spec* from *integer*. **setfable**.

(<sup>Fu</sup>**deposit-field**)  
(<sup>Fu</sup>**dpb**) *int-a byte-spec int-b*)

▷ Return *int-b* with bits denoted by *byte-spec* replaced by corresponding bits of *int-a*, or by the low (**byte-size** *byte-spec*) bits of *int-a*, respectively.

(<sup>Fu</sup>**mask-field** *byte-spec integer*)

▷ Return copy of *integer* with all bits unset but those denoted by *byte-spec*. **setfable**.

(<sup>Fu</sup>**byte** *size position*)

▷ Byte specifier for a byte of *size* bits starting at a weight of  $2^{\textit{position}}$ .

(<sup>Fu</sup>**byte-size** *byte-spec*)

(<sup>Fu</sup>**byte-position** *byte-spec*)

▷ Size or position, respectively, of *byte-spec*.

## 1.5 Implementation-Dependent

(<sup>Co</sup>**short-float**)  
(<sup>Co</sup>**single-float**)  
(<sup>Co</sup>**double-float**)  
(<sup>Co</sup>**long-float**)

{ epsilon  
negative-epsilon }

▷ Smallest possible number making a difference when added or subtracted, respectively.

(<sup>Co</sup>**least-negative**)  
(<sup>Co</sup>**least-negative-normalized**)  
(<sup>Co</sup>**least-positive**)  
(<sup>Co</sup>**least-positive-normalized**)

{ short-float  
single-float  
double-float  
long-float }

▷ Available numbers closest to  $-0$  or  $+0$ , respectively.

(<sup>Co</sup>**most-negative**)  
(<sup>Co</sup>**most-positive**)

{ short-float  
single-float  
double-float  
long-float  
fixnum }

▷ Available numbers closest to  $-\infty$  or  $+\infty$ , respectively.

(<sup>Fu</sup>**decode-float** *n*)

(<sup>Fu</sup>**integer-decode-float** *n*)

▷ Return significand, exponent, and sign of float *n*.

(<sup>Fu</sup>**scale-float** *n* [*i*]) ▷ With *n*'s radix *b*, return  $nb^i$ .

(<sup>Fu</sup>**float-radix** *n*)

(<sup>Fu</sup>**float-digits** *n*)

(<sup>Fu</sup>**float-precision** *n*)

▷ Radix, number of digits in that radix, or precision in that radix, respectively, of float *n*.

(<sup>Fu</sup>**upgraded-complex-part-type** *foo* [*environment* nil])

▷ Type of most specialized **complex** number able to hold parts of type *foo*.

## 2 Characters

The **standard-char** type comprises a-z, A-Z, 0-9, **Newline**, **Space**, and `!?"'@. : ; * + - / \ ^ _ ` < = > # % & ( ) [ ] { }`.

(<sup>Fu</sup>**characterp** *foo*)

(<sup>Fu</sup>**standard-char-p** *char*) ▷ T if argument is of indicated type.

(<sup>Fu</sup>**graphic-char-p** *character*)

(<sup>Fu</sup>**alpha-char-p** *character*)

(<sup>Fu</sup>**alphanumericp** *character*)

▷ T if *character* is visible, alphabetic, or alphanumeric, respectively.

(<sup>Fu</sup>**upper-case-p** *character*)

(<sup>Fu</sup>**lower-case-p** *character*)

(<sup>Fu</sup>**both-case-p** *character*)

▷ Return T if *character* is uppercase, lowercase, or able to be in another case, respectively.

(<sup>Fu</sup>**digit-char-p** *character* [*radix* 10])

▷ Return its weight if *character* is a digit, or NIL otherwise.

(<sup>Fu</sup>**char=** *character*<sup>+</sup>)

(<sup>Fu</sup>**char/=** *character*<sup>+</sup>)

▷ Return T if all *characters*, or none, respectively, are equal.

(<sup>Fu</sup>**char-equal** *character*<sup>+</sup>)

(<sup>Fu</sup>**char-not-equal** *character*<sup>+</sup>)

▷ Return T if all *characters*, or none, respectively, are equal ignoring case.

(<sup>Fu</sup>**char** > *character*<sup>+</sup>)

(<sup>Fu</sup>**char** >= *character*<sup>+</sup>)

(<sup>Fu</sup>**char** < *character*<sup>+</sup>)

(<sup>Fu</sup>**char** <= *character*<sup>+</sup>)

▷ Return T if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

(<sup>Fu</sup>**char-greaterp** *character*<sup>+</sup>)

(<sup>Fu</sup>**char-not-lessp** *character*<sup>+</sup>)

(<sup>Fu</sup>**char-lessp** *character*<sup>+</sup>)

(<sup>Fu</sup>**char-not-greaterp** *character*<sup>+</sup>)

▷ Return T if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively, ignoring case.

(<sup>Fu</sup>**char-upcase** *character*)

(<sup>Fu</sup>**char-downcase** *character*)

▷ Return corresponding uppercase/lowercase character, respectively.

(<sup>Fu</sup>**digit-char** *i* [*radix* 10]) ▷ Character representing digit *i*.

(<sup>Fu</sup>**char-name** *character*) ▷ *character*'s name if any, or NIL.

(<sup>Fu</sup>**name-char** *foo*) ▷ Character named *foo* if any, or NIL.

(<sup>Fu</sup>**char-int** *character*)

(<sup>Fu</sup>**char-code** *character*) ▷ Code of *character*.

(<sup>Fu</sup>**code-char** *code*) ▷ Character with *code*.

<sup>Co</sup>**char-code-limit** ▷ Upper bound of (**char-code** *char*);  $\geq 96$ .

(<sup>Fu</sup>**character** *c*) ▷ Return #\c.

<sup>Fu</sup>(**bit** *bit-array* [*subscripts*])

<sup>Fu</sup>(**sbit** *simple-bit-array* [*subscripts*])

▷ Return element of *bit-array* or of *simple-bit-array*. **setf**-able.

<sup>Fu</sup>(**bit-not** *bit-array* [*result-bit-array* num])

▷ Return result of bitwise negation of *bit-array*. If *result-bit-array* is T, put result in *bit-array*; if it is NIL, make a new array for result.

<sup>Fu</sup>(**bit-eqv**)  
<sup>Fu</sup>(**bit-and**)  
<sup>Fu</sup>(**bit-andc1**)  
<sup>Fu</sup>(**bit-andc2**)  
<sup>Fu</sup>(**bit-nand**)  
<sup>Fu</sup>(**bit-ior**)  
<sup>Fu</sup>(**bit-orc1**)  
<sup>Fu</sup>(**bit-orc2**)  
<sup>Fu</sup>(**bit-xor**)  
<sup>Fu</sup>(**bit-nor**)

*bit-array-a bit-array-b* [*result-bit-array* num])

▷ Return result of bitwise logical operations (cf. operations of <sup>Fu</sup>**boole**, p. 5) on *bit-array-a* and *bit-array-b*. If *result-bit-array* is T, put result in *bit-array-a*; if it is NIL, make a new array for result.

<sup>co</sup>**array-rank-limit** ▷ Upper bound of array rank; ≥ 8.

<sup>co</sup>**array-dimension-limit**

▷ Upper bound of an array dimension; ≥ 1024.

<sup>co</sup>**array-total-size-limit** ▷ Upper bound of array size; ≥ 1024.

### 5.3 Vector Functions

Vectors can as well be manipulated by sequence functions; see section 6.

<sup>Fu</sup>(**vector** *foo\**) ▷ Return fresh simple vector of *foos*.

<sup>Fu</sup>(**svref** *vector* *i*) ▷ Return element *i* of simple *vector*. **setf**-able.

<sup>Fu</sup>(**vector-push** *foo* *vector*)

▷ Return NIL if *vector*'s fill pointer equals size of *vector*. Otherwise replace element of *vector* pointed to by fill pointer with *foo*; then increment fill pointer.

<sup>Fu</sup>(**vector-push-extend** *foo* *vector* [*num*])

▷ Replace element of *vector* pointed to by fill pointer with *foo*, then increment fill pointer. Extend *vector*'s size by ≥ *num* if necessary.

<sup>Fu</sup>(**vector-pop** *vector*)

▷ Return element of *vector* its fillpointer points to after de-crementation.

<sup>Fu</sup>(**fill-pointer** *vector*) ▷ Fill pointer of *vector*. **setf**-able.

## 6 Sequences

### 6.1 Sequence Predicates

<sup>Fu</sup>{**every**  
<sup>Fu</sup>**notevery**}

*test sequence*<sup>+</sup>  
▷ Return NIL or T, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns NIL.

<sup>Fu</sup>{**some**  
<sup>Fu</sup>**notany**}

*test sequence*<sup>+</sup>  
▷ Return value of *test* or NIL, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns non-NIL.

<sup>Fu</sup>(**atom** *foo*) ▷ Return T if *foo* is not a **cons**.

<sup>Fu</sup>(**tailp** *foo list*) ▷ Return T if *foo* is a tail of *list*.

<sup>Fu</sup>(**member** *foo list*  $\left\{ \begin{array}{l} \text{:test function } \overline{\# \text{'eq}}$

$\left. \begin{array}{l} \text{:test-not function} \\ \text{:key function} \end{array} \right\}$ )  
▷ Return tail of *list* starting with its first element matching *foo*. Return NIL if there is no such element.

<sup>Fu</sup>{**member-if**  
<sup>Fu</sup>**member-if-not**}

*test list* [:key function])  
▷ Return tail of *list* starting with its first element satisfying *test*. Return NIL if there is no such element.

<sup>Fu</sup>(**subsetp** *list-a list-b*  $\left\{ \begin{array}{l} \text{:test function } \overline{\# \text{'eq}}$

$\left. \begin{array}{l} \text{:test-not function} \\ \text{:key function} \end{array} \right\}$ )  
▷ Return T if *list-a* is a subset of *list-b*.

### 4.2 Lists

<sup>Fu</sup>(**cons** *foo bar*) ▷ Return new cons (*foo . bar*).

<sup>Fu</sup>(**list** *foo\**) ▷ Return list of *foos*.

<sup>Fu</sup>(**list\*** *foo*<sup>+</sup>)

▷ Return list of *foos* with last *foo* becoming cdr of last cons. Return foo if only one *foo* given.

<sup>Fu</sup>(**make-list** *num* [:initial-element *foo* num])

▷ New list with *num* elements set to *foo*.

<sup>Fu</sup>(**list-length** *list*) ▷ Length of *list*; NIL for circular *list*.

<sup>Fu</sup>(**car** *list*) ▷ Car of *list* or NIL if *list* is NIL. **setf**-able.

<sup>Fu</sup>(**cdr** *list*) ▷ Cdr of *list* or NIL if *list* is NIL. **setf**-able.

<sup>Fu</sup>(**nthcdr** *n list*) ▷ Return tail of *list* after calling <sup>Fu</sup>**cdr** *n* times.

<sup>Fu</sup>(**first** <sup>Fu</sup>**second** <sup>Fu</sup>**third** <sup>Fu</sup>**fourth** <sup>Fu</sup>**fifth** <sup>Fu</sup>**sixth** ... <sup>Fu</sup>**ninth** <sup>Fu</sup>**tenth**) *list*)

▷ Return nth element of *list* if any, or NIL otherwise. **setf**-able.

<sup>Fu</sup>(**nth** *n list*) ▷ Zero-indexed nth element of *list*. **setf**-able.

<sup>Fu</sup>(**cXr** *list*)

▷ With *X* being one to four **as** and **ds** representing <sup>Fu</sup>**cars** and <sup>Fu</sup>**cdrs**, e.g. (<sup>Fu</sup>**cadr** *bar*) is equivalent to (<sup>Fu</sup>**car** (<sup>Fu</sup>**cdr** *bar*)). **setf**-able.

<sup>Fu</sup>(**last** *list* [*num* num]) ▷ Return list of last *num* conses of *list*.

<sup>Fu</sup>{**butlast**  
<sup>Fu</sup>**nbutlast**}

*list* [*num* num] ▷ list excluding last *num* conses.

<sup>Fu</sup>{**rplaca**  
<sup>Fu</sup>**rplacd**}

cons *object*)  
▷ Replace car, or cdr, respectively, of cons with *object*.

<sup>Fu</sup>(**ldiff** *list foo*)

▷ If *foo* is a tail of *list*, return preceding part of *list*. Otherwise return list.

<sup>Fu</sup>(**adjoin** *foo list*  $\left\{ \begin{array}{l} \text{:test function } \overline{\# \text{'eq}}$

$\left. \begin{array}{l} \text{:test-not function} \\ \text{:key function} \end{array} \right\}$ )  
▷ Return list if *foo* is already member of *list*. If not, return (<sup>Fu</sup>**cons** *foo list*).

<sup>M</sup>(**pop** *place*) ▷ Set *place* to (<sup>Fu</sup>**cdr** *place*), return (<sup>Fu</sup>**car** *place*).

<sup>M</sup>(**push** *foo* *place*) ▷ Set *place* to (<sup>Fu</sup>**cons** *foo place*).

$(^M \text{pushnew } \textit{foo} \textit{place})$   $\left\{ \left\{ \begin{array}{l} \text{:test } \textit{function} \overline{\#'\text{eq}} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\} \right\}$

▷ Set *place* to  $(\text{adjoin } \textit{foo} \textit{place})$ .

$(^{\text{Fu}} \text{append } [\textit{proper-list}^* \textit{foo}] \overline{\text{NIL}})$

$(^{\text{Fu}} \text{nconc } [\textit{non-circular-list}^* \textit{foo}] \overline{\text{NIL}})$

▷ Return concatenated list or, with only one argument, *foo*. *foo* can be of any type.

$(^{\text{Fu}} \text{revappend } \textit{list} \textit{foo})$

$(^{\text{Fu}} \text{nreconc } \textit{list} \textit{foo})$

▷ Return concatenated list after reversing order in *list*.

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{mapcar} \\ ^{\text{Fu}} \text{maplist} \end{array} \right\} \textit{function} \textit{list}^+$

▷ Return list of return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*.

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{mapcan} \\ ^{\text{Fu}} \text{mapcon} \end{array} \right\} \textit{function} \textit{list}^+$

▷ Return list of concatenated return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should return a list.

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{mapc} \\ ^{\text{Fu}} \text{mapl} \end{array} \right\} \textit{function} \textit{list}^+$

▷ Return first *list* after successively applying *function* to corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should have some side effects.

$(^{\text{Fu}} \text{copy-list } \textit{list})$  ▷ Return copy of *list* with shared elements.

### 4.3 Association Lists

$(^{\text{Fu}} \text{pairlis } \textit{keys} \textit{values} [\textit{alist}] \overline{\text{NIL}})$

▷ Prepend to *alist* an association list made from lists *keys* and *values*.

$(^{\text{Fu}} \text{acons } \textit{key} \textit{value} \textit{alist})$

▷ Return *alist* with a (*key* . *value*) pair added.

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{assoc} \\ ^{\text{Fu}} \text{rassoc} \end{array} \right\} \textit{foo} \textit{alist} \left\{ \left\{ \begin{array}{l} \text{:test } \textit{test} \overline{\#'\text{eq}} \\ \text{:test-not } \textit{test} \\ \text{:key } \textit{function} \end{array} \right\} \right\}$

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{assoc-if[-not]} \\ ^{\text{Fu}} \text{rassoc-if[-not]} \end{array} \right\} \textit{test} \textit{alist} [\text{:key } \textit{function}]$

▷ First cons whose car, or cdr, respectively, satisfies *test*.

$(^{\text{Fu}} \text{copy-alist } \textit{alist})$  ▷ Return copy of *alist*.

### 4.4 Trees

$(^{\text{Fu}} \text{tree-equal } \textit{foo} \textit{bar} \left\{ \left\{ \begin{array}{l} \text{:test } \textit{test} \overline{\#'\text{eq}} \\ \text{:test-not } \textit{test} \end{array} \right\} \right\})$

▷ Return T if trees *foo* and *bar* have same shape and leaves satisfying *test*.

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{subst} \\ ^{\text{Fu}} \text{nsubst} \end{array} \right\} \textit{new} \textit{old} \textit{tree} \left\{ \left\{ \begin{array}{l} \text{:test } \textit{function} \overline{\#'\text{eq}} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\} \right\}$

▷ Make copy of *tree* with each subtree or leaf matching *old* replaced by *new*.

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{subst-if[-not]} \\ ^{\text{Fu}} \text{nsubst-if[-not]} \end{array} \right\} \textit{new} \textit{test} \textit{tree} [\text{:key } \textit{function}]$

▷ Make copy of *tree* with each subtree or leaf satisfying *test* replaced by *new*.

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{sublis} \\ ^{\text{Fu}} \text{nsublis} \end{array} \right\} \textit{association-list} \textit{tree} \left\{ \left\{ \begin{array}{l} \text{:test } \textit{function} \overline{\#'\text{eq}} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\} \right\}$

▷ Make copy of *tree* with each subtree or leaf matching a key in *association-list* replaced by that key's value.

$(^{\text{Fu}} \text{copy-tree } \textit{tree})$  ▷ Copy of *tree* with same shape and leaves.

## 4.5 Sets

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{intersection} \\ ^{\text{Fu}} \text{set-difference} \\ ^{\text{Fu}} \text{union} \\ ^{\text{Fu}} \text{set-exclusive-or} \\ ^{\text{Fu}} \text{intersection} \\ ^{\text{Fu}} \text{nset-difference} \\ ^{\text{Fu}} \text{union} \\ ^{\text{Fu}} \text{nset-exclusive-or} \end{array} \right\} \left\{ \begin{array}{l} a \ b \\ \tilde{a} \ b \\ \tilde{a} \ \tilde{b} \end{array} \right\} \left\{ \left\{ \begin{array}{l} \text{:test } \textit{function} \overline{\#'\text{eq}} \\ \text{:test-not } \textit{function} \\ \text{:key } \textit{function} \end{array} \right\} \right\}$

▷ Return  $a \cap b$ ,  $a \setminus b$ ,  $a \cup b$ , or  $a \triangle b$ , respectively, of lists *a* and *b*.

## 5 Arrays

### 5.1 Predicates

$(^{\text{Fu}} \text{arrayp } \textit{foo})$

$(^{\text{Fu}} \text{vectorp } \textit{foo})$

$(^{\text{Fu}} \text{simple-vector-p } \textit{foo})$  ▷ T if *foo* is of indicated type.

$(^{\text{Fu}} \text{bit-vector-p } \textit{foo})$

$(^{\text{Fu}} \text{simple-bit-vector-p } \textit{foo})$

$(^{\text{Fu}} \text{adjustable-array-p } \textit{array})$

$(^{\text{Fu}} \text{array-has-fill-pointer-p } \textit{array})$

▷ T if *array* is adjustable/has a fill pointer, respectively.

$(^{\text{Fu}} \text{array-in-bounds-p } \textit{array} [\textit{subscripts}])$

▷ Return T if *subscripts* are in *array*'s bounds.

### 5.2 Array Functions

$\left\{ \begin{array}{l} ^{\text{Fu}} \text{make-array} \textit{dimension-sizes} [\text{:adjustable } \textit{bool}] \overline{\text{NIL}} \\ ^{\text{Fu}} \text{adjust-array } \textit{array} \textit{dimension-sizes} \end{array} \right\}$

$\left\{ \begin{array}{l} \text{:element-type } \textit{type} \overline{\text{NIL}} \\ \text{:fill-pointer } \{ \textit{num} \mid \textit{bool} \} \overline{\text{NIL}} \\ \text{:initial-element } \textit{obj} \\ \text{:initial-contents } \textit{sequence} \\ \text{:displaced-to } \textit{array} \overline{\text{NIL}} [\text{:displaced-index-offset } \textit{ij}] \end{array} \right\}$

▷ Return fresh, or readjust, respectively, vector or array.

$(^{\text{Fu}} \text{aref } \textit{array} [\textit{subscripts}])$

▷ Return array element pointed to by *subscripts*. **settable**.

$(^{\text{Fu}} \text{row-major-aref } \textit{array} \textit{i})$

▷ Return *i*th element of *array* in row-major order. **settable**.

$(^{\text{Fu}} \text{array-row-major-index } \textit{array} [\textit{subscripts}])$

▷ Index in row-major order of the element denoted by *subscripts*.

$(^{\text{Fu}} \text{array-dimensions } \textit{array})$

▷ List containing the lengths of *array*'s dimensions.

$(^{\text{Fu}} \text{array-dimension } \textit{array} \textit{i})$

▷ Length of *i*th dimension of *array*.

$(^{\text{Fu}} \text{array-total-size } \textit{array})$

▷ Number of elements in *array*.

$(^{\text{Fu}} \text{array-rank } \textit{array})$

▷ Number of dimensions of *array*.

$(^{\text{Fu}} \text{array-displacement } \textit{array})$

▷ Target array and offset.

## 8 Structures

**(<sup>M</sup>defstruct** *foo*)

```

{
  (:conc-name [slot-prefix foo-])
  (:constructor [maker MAKE-foo] [(ord-λ*)])
  (:copier [copier COPY-foo])
  (:include struct (slot [init { :type sl-type } ]))
  (:type {list vector} {vector type}) { :named (:initial-offset n) }
  (:print-object [o-printer])
  (:print-function [f-printer])
  (:predicate [p-name foo-p])
  (slot [doc] (slot [init { :type slot-type } ]))
}

```

▷ Define structure *foo* together with functions `MAKE-foo`, `COPY-foo` and `foo-P`; and `setf` accessors `foo-slot`. Instances are of class *foo* or, if `defstruct` option `:type` is given, of the specified type. They can be created by `(MAKE-foo { :slot value }*)` or, if `ord-λ` (see p. 18) is given, by `(maker arg* { :key value }*)`. In the latter case, `args` and `:keys` correspond to the positional and keyword parameters defined in `ord-λ` whose `vars` in turn correspond to `slots`. `:print-object`/`:print-function` generate a `print-object` method for an instance *bar* of *foo* calling `(o-printer bar stream)` or `(f-printer bar stream print-level)`, respectively. If `:type` without `:named` is given, no `foo-P` is created.

**(<sup>Fu</sup>copy-structure** *structure*)

▷ Return copy of structure with shared slot values.

## 9 Control Structure

### 9.1 Predicates

**(<sup>Fu</sup>eq** *foo bar*) ▷ T if *foo* and *bar* are identical.

**(<sup>Fu</sup>eql** *foo bar*) ▷ T if *foo* and *bar* are identical, or the same **character**, or **numbers** of the same type and value.

**(<sup>Fu</sup>equal** *foo bar*) ▷ T if *foo* and *bar* are **eql**, or are equivalent **pathnames**, or are **conses** with **equal** cars and cdrs, or are **strings** or **bit-vectors** with **eql** elements below their fill pointers.

**(<sup>Fu</sup>equalp** *foo bar*) ▷ T if *foo* and *bar* are identical; or are the same **character** ignoring case; or are **numbers** of the same value ignoring type; or are equivalent **pathnames**; or are **conses** or **arrays** of the same shape with **equalp** elements; or are structures of the same type with **equalp** elements; or are **hash-tables** of the same size with the same **test** function, the same keys in terms of **test** function, and **equalp** elements.

**(<sup>Fu</sup>not** *foo*) ▷ T if *foo* is `NIL`; `NIL` otherwise.

**(<sup>Fu</sup>boundp** *symbol*) ▷ T if *symbol* is a special variable.

**(<sup>Fu</sup>mismatch** *sequence-a sequence-b*)

```

{
  (:from-end bool NIL)
  (:test function #'eql)
  (:test-not function)
  (:start1 start-a 0)
  (:start2 start-b 0)
  (:end1 end-a NIL)
  (:end2 end-b NIL)
  (:key function)
}

```

▷ Return position in sequence-a where *sequence-a* and *sequence-b* begin to mismatch. Return `NIL` if they match entirely.

### 6.2 Sequence Functions

**(<sup>Fu</sup>make-sequence** *sequence-type size* [:initial-element *foo*])

▷ Make sequence of *sequence-type* with *size* elements.

**(<sup>Fu</sup>concatenate** *type sequence\**)

▷ Return concatenated sequence of *type*.

**(<sup>Fu</sup>merge** *type sequence-a sequence-b test* [:key function NIL])

▷ Return interleaved sequence of *type*. Merged sequence will be sorted if both *sequence-a* and *sequence-b* are sorted.

**(<sup>Fu</sup>fill** *sequence foo* { :start *start* } { :end *end* NIL })

▷ Return sequence after setting elements between *start* and *end* to *foo*.

**(<sup>Fu</sup>length** *sequence*)

▷ Return length of *sequence* (being value of fill pointer if applicable).

**(<sup>Fu</sup>count** *foo sequence*)

```

{
  (:from-end bool NIL)
  (:test function #'eql)
  (:test-not function)
  (:start start 0)
  (:end end NIL)
  (:key function)
}

```

▷ Return number of elements in *sequence* which match *foo*.

**(<sup>Fu</sup>count-if** *test sequence*)

```

{
  (:from-end bool NIL)
  (:start start 0)
  (:end end NIL)
  (:key function)
}

```

▷ Return number of elements in *sequence* which satisfy *test*.

**(<sup>Fu</sup>elt** *sequence index*)

▷ Return element of *sequence* pointed to by zero-indexed *index*. **setfable**.

**(<sup>Fu</sup>subseq** *sequence start* [*end* NIL])

▷ Return subsequence of *sequence* between *start* and *end*. **setfable**.

**(<sup>Fu</sup>sort** *sequence test* [:key function])

▷ Return sequence sorted. Order of elements considered equal is not guaranteed/retained, respectively.

**(<sup>Fu</sup>reverse** *sequence*)

▷ Return sequence in reverse order.

**(<sup>Fu</sup>find** *foo sequence*)

```

{
  (:from-end bool NIL)
  (:test function #'eql)
  (:test-not test)
  (:start start 0)
  (:end end NIL)
  (:key function)
}

```

▷ Return first element in *sequence* which matches *foo*, or its position relative to the begin of *sequence*, respectively.

$\left. \begin{array}{l} \text{Fu find-if} \\ \text{Fu find-if-not} \\ \text{Fu position-if} \\ \text{Fu position-if-not} \end{array} \right\} \text{ test sequence} \left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

$\text{Fu search } \text{sequence-a } \text{sequence-b} \left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:test } \text{function}_{\text{#'=eq}} \\ \text{:test-not } \text{function} \\ \text{:start1 } \text{start-a}_{\square} \\ \text{:start2 } \text{start-b}_{\square} \\ \text{:end1 } \text{end-a}_{\text{NIL}} \\ \text{:end2 } \text{end-b}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Search *sequence-b* for a subsequence matching *sequence-a*. Return position in *sequence-b*, or NIL.

$\left. \begin{array}{l} \text{Fu remove } \text{foo } \text{sequence} \\ \text{Fu delete } \text{foo } \text{sequence} \end{array} \right\} \left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:test } \text{function}_{\text{#'=eq}} \\ \text{:test-not } \text{function} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* without elements matching *foo*.

$\left. \begin{array}{l} \text{Fu remove-if} \\ \text{Fu remove-if-not} \\ \text{Fu delete-if} \\ \text{Fu delete-if-not} \end{array} \right\} \text{ test } \text{sequence} \left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) elements satisfying *test* removed.

$\left. \begin{array}{l} \text{Fu remove-duplicates } \text{sequence} \\ \text{Fu delete-duplicates } \text{sequence} \end{array} \right\} \left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:test } \text{function}_{\text{#'=eq}} \\ \text{:test-not } \text{function} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Make copy of *sequence* without duplicates.

$\left. \begin{array}{l} \text{Fu substitute } \text{new } \text{old } \text{sequence} \\ \text{Fu nsubstitute } \text{new } \text{old } \text{sequence} \end{array} \right\} \left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:test } \text{function}_{\text{#'=eq}} \\ \text{:test-not } \text{function} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) *olds* replaced by *new*.

$\left. \begin{array}{l} \text{Fu substitute-if} \\ \text{Fu substitute-if-not} \\ \text{Fu nsubstitute-if} \\ \text{Fu nsubstitute-if-not} \end{array} \right\} \text{ new } \text{test } \text{sequence} \left\{ \begin{array}{l} \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \\ \text{:count } \text{count}_{\text{NIL}} \end{array} \right\}$

▷ Make copy of *sequence* with all (or *count*) elements satisfying *test* replaced by *new*.

$\text{Fu replace } \text{sequence-a } \text{sequence-b} \left\{ \begin{array}{l} \text{:start1 } \text{start-a}_{\square} \\ \text{:start2 } \text{start-b}_{\square} \\ \text{:end1 } \text{end-a}_{\text{NIL}} \\ \text{:end2 } \text{end-b}_{\text{NIL}} \end{array} \right\}$

▷ Replace elements of *sequence-a* with elements of *sequence-b*.

$\text{Fu map } \text{type } \text{function } \text{sequence}^+$

▷ Apply *function* successively to corresponding elements of the *sequences*. Return values as a sequence of *type*. If *type* is NIL, return NIL.

$\text{Fu map-into } \text{result-sequence } \text{function } \text{sequence}^*$

▷ Store into *result-sequence* successively values of *function* applied to corresponding elements of the *sequences*.

$\text{Fu reduce } \text{function } \text{sequence} \left\{ \begin{array}{l} \text{:initial-value } \text{foo}_{\text{NIL}} \\ \text{:from-end } \text{bool}_{\text{NIL}} \\ \text{:start } \text{start}_{\square} \\ \text{:end } \text{end}_{\text{NIL}} \\ \text{:key } \text{function} \end{array} \right\}$

▷ Starting with the first two elements of *sequence*, apply *function* successively to its last return value together with the next element of *sequence*. Return last value of function.

$\text{Fu copy-seq } \text{sequence}$

▷ Copy of *sequence* with shared elements.

## 7 Hash Tables

Key-value storage similar to hash tables can as well be achieved using association lists and property lists; see pages 10 and 17.

$\text{Fu hash-table-p } \text{foo}$  ▷ Return T if *foo* is of type **hash-table**.

$\text{Fu make-hash-table} \left\{ \begin{array}{l} \text{:test } \{\text{Fu eq} | \text{Fu equal} | \text{Fu equalp}\}_{\text{#'=eq}} \\ \text{:size } \text{int} \\ \text{:rehash-size } \text{num} \\ \text{:rehash-threshold } \text{num} \end{array} \right\}$

▷ Make a hash table.

$\text{Fu gethash } \text{key } \text{hash-table} [\text{default}_{\text{NIL}}]$

▷ Return object with *key* if any or *default* otherwise; and T if found, NIL otherwise. **setfable**.

$\text{Fu hash-table-count } \text{hash-table}$

▷ Number of entries in *hash-table*.

$\text{Fu remhash } \text{key } \text{hash-table}$

▷ Remove from *hash-table* entry with *key* and return T if it existed. Return NIL otherwise.

$\text{Fu clrhash } \text{hash-table}$  ▷ Empty *hash-table*.

$\text{Fu maphash } \text{function } \text{hash-table}$

▷ Iterate over *hash-table* calling *function* on key and value. Return NIL.

$\text{Fu with-hash-table-iterator } (\text{foo } \text{hash-table}) (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}^*}$

▷ Return values of forms. In *forms*, invocations of (*foo*) return: T if an entry is returned; its key; its value.

$\text{Fu hash-table-test } \text{hash-table}$

▷ Test function used in *hash-table*.

$\text{Fu hash-table-size } \text{hash-table}$   
 $\text{Fu hash-table-rehash-size } \text{hash-table}$   
 $\text{Fu hash-table-rehash-threshold } \text{hash-table}$

▷ Current size, rehash-size, or rehash-threshold, respectively, as used in **make-hash-table**.

$\text{Fu sxhash } \text{foo}$

▷ Hash code unique for any argument **equal** *foo*.

[**&allow-other-keys**] [**&environment** *var*])

▷ Specify how to **setf** a place accessed by *function*.  
**Short form:** (**setf** (*function arg\**) *value-form*) is replaced by (*updater arg\* value-form*); the latter must return *value-form*.  
**Long form:** on invocation of (**setf** (*function arg\**) *value-form*), *forms* must expand into code that sets the place accessed where *setf-λ* and *s-var\** describe the arguments of *function* and the value(s) to be stored, respectively; and that returns the value(s) of *s-var\**. *forms* are enclosed in an implicit **block** named *function*.

(<sup>M</sup>**define-setf-expander** *function* (*macro-λ\**) (**declare** *decl\**)\* [*doc*]  
*form\**<sup>F\*</sup>)

▷ Specify how to **setf** a place accessed by *function*. On invocation of (**setf** (*function arg\**) *value-form*), *form\** must expand into code returning *arg-vars*, *args*, *newval-vars*, *set-form*, and *get-form* as described with <sup>Fu</sup>**get-setf-expansion** where the elements of macro lambda list *macro-λ\** are bound to corresponding *args*. *forms* are enclosed in an implicit **block** named *function*.

(<sup>Fu</sup>**get-setf-expansion** *place* [*environment*<sub>NTI</sub>])

▷ Return lists of temporary variables *arg-vars* and of corresponding *args* as given with *place*, list *newval-vars* with temporary variables corresponding to the new values, and *set-form* and *get-form* specifying in terms of *arg-vars* and *newval-vars* how to **setf** and how to read *place*.

(<sup>M</sup>**define-modify-macro** *foo* ([**&optional**

*var*  
 (*var* [*init*<sub>NTI</sub> [*supplied-p*]])<sup>\*</sup>]) [**&rest** *var*]) *function* [*doc*])

▷ Define macro *foo* able to modify a place. On invocation of (*foo place arg\**), the value of *function* applied to *place* and *args* will be stored into *place* and returned.

## λambda-list-keywords

▷ List of macro lambda list keywords. These are at least:

**&whole** *var*

▷ Bind *var* to the entire macro call form.

**&optional** *var\**

▷ Bind *vars* to corresponding arguments if any.

{**&rest**{**&body**} *var*

▷ Bind *var* to a list of remaining arguments.

**&key** *var\**

▷ Bind *vars* to corresponding keyword arguments.

**&allow-other-keys**

▷ Suppress keyword argument checking. Callers can do so using **&allow-other-keys T**.

**&environment** *var*

▷ Bind *var* to the lexical compilation environment.

**&aux** *var\**

▷ Bind *vars* as in <sup>SO</sup>**let\***.

## 9.5 Control Flow

(<sup>SO</sup>**if** *test* *then* [*else*<sub>NTI</sub>])

▷ Return values of *then* if *test* returns T; return values of *else* otherwise.

(<sup>M</sup>**cond** (*test then\**<sub>ECST</sub>)\*)

▷ Return the values of the first *then\** whose *test* returns T; return NIL if all *tests* return NIL.

{<sup>M</sup>**when**  
<sup>M</sup>**unless**} *test foo\**<sup>P\*</sup>)

▷ Evaluate *foos* and return their values if *test* returns T or NIL, respectively. Return NIL otherwise.

(<sup>Fu</sup>**constantp** *foo* [*environment*<sub>NTI</sub>])

▷ T if *foo* is a constant form.

(<sup>Fu</sup>**functionp** *foo*)

▷ T if *foo* is of type **function**.

(<sup>Fu</sup>**fboundp**  $\left\{ \begin{array}{l} \text{foo} \\ \text{(setf foo)} \end{array} \right\}$ )

▷ T if *foo* is a global function or macro.

## 9.2 Variables

{<sup>M</sup>**defconstant**  
<sup>M</sup>**defparameter**} *foo form* [*doc*])

▷ Assign value of *form* to global constant/dynamic variable *foo*.

(<sup>M</sup>**defvar** *foo* [*form* [*doc*]])

▷ Unless bound already, assign value of *form* to dynamic variable *foo*.

{<sup>M</sup>**setf**  
<sup>M</sup>**psetf**} {*place form*}\* )

▷ Set *places* to primary values of *forms*. Return values of last form/NIL; work sequentially/in parallel, respectively.

{<sup>SO</sup>**setq**  
<sup>M</sup>**psetq**} {*symbol form*}\* )

▷ Set *symbols* to primary values of *forms*. Return value of last form/NIL; work sequentially/in parallel, respectively.

(<sup>Fu</sup>**set** *symbol* *foo*)

▷ Set *symbol*'s value cell to *foo*. Deprecated.

(<sup>M</sup>**multiple-value-setq** *vars form*)

▷ Set elements of *vars* to the values of *form*. Return *form*'s primary value.

(<sup>M</sup>**shiftf** *place*<sup>+</sup> *foo*)

▷ Store value of *foo* in rightmost *place* shifting values of *places* left, returning first place.

(<sup>M</sup>**rotatef** *place*<sup>\*</sup>)

▷ Rotate values of *places* left, old first becoming new last *place*'s value. Return NIL.

(<sup>Fu</sup>**makunbound** *foo*)

▷ Delete special variable *foo* if any.

(<sup>Fu</sup>**get** *symbol key* [*default*<sub>NTI</sub>])

(<sup>Fu</sup>**getf** *place key* [*default*<sub>NTI</sub>])

▷ First entry key from property list stored in *symbol*/in *place*, respectively, or default if there is no *key*. **setfable**.

(<sup>Fu</sup>**get-properties** *property-list keys*)

▷ Return key and value of first entry from *property-list* matching a key from *keys*, and tail of *property-list* starting with that key. Return NIL, NIL, and NIL if there was no matching key in *property-list*.

(<sup>Fu</sup>**remprop** *symbol key*)

(<sup>M</sup>**remf** *place key*)

▷ Remove first entry *key* from property list stored in *symbol*/in *place*, respectively. Return T if *key* was there, or NIL otherwise.

## 9.3 Functions

Below, ordinary lambda list (*ord-λ\**) has the form

$$(var^* [\&optional \left\{ \begin{array}{l} var \\ (var [init_{\text{NIL}} [supplied-p]]) \end{array} \right\}^* ] [\&rest var])$$

$$[\&key \left\{ \begin{array}{l} var \\ \left( \left\{ \begin{array}{l} var \\ (:key var) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \right) \end{array} \right\}^* ] [\&allow-other-keys]$$

$$[\&aux \left\{ \begin{array}{l} var \\ (var [init_{\text{NIL}}]) \end{array} \right\}^* ]).$$

*supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

$$\left( \begin{array}{l} \text{M} \text{defun} \\ \text{M} \text{lambda} \end{array} \left\{ \begin{array}{l} foo (ord-\lambda^*) \\ (\text{setf } foo) (new-value ord-\lambda^*) \end{array} \right\} (\text{declare } \widehat{decl}^*)^* [\widehat{doc}] \right)$$

*form<sup>P\*</sup>*)

▷ Define a function named *foo* or (**setf** *foo*), or an anonymous function, respectively, which applies *forms* to *ord-λs*. For **defun**, *forms* are enclosed in an implicit **block** named *foo*.

$$\left( \begin{array}{l} \text{F} \text{let} \\ \text{O} \text{labels} \end{array} \right) \left( \left( \begin{array}{l} foo (ord-\lambda^*) \\ (\text{setf } foo) (new-value ord-\lambda^*) \end{array} \right) (\text{declare } \widehat{local-decl}^*)^* \right)$$

*[doc] local-form<sup>P\*</sup>*) (**declare** *decl<sup>\*</sup>*) *form<sup>P\*</sup>*)

▷ Evaluate *forms* with locally defined functions *foo*. Globally defined functions of the same name are shadowed. Each *foo* is also the name of an implicit **block** around its corresponding *local-form<sup>\*</sup>*. Only for **labels**, functions *foo* are visible inside *local-forms*. Return values of forms.

$$\left( \begin{array}{l} \text{F} \text{function} \\ \text{O} \end{array} \right) \left\{ \begin{array}{l} foo \\ \text{M} \text{lambda } form^* \end{array} \right\}$$

▷ Return lexically innermost function named *foo* or a lexical closure of the **lambda** expression.

$$\left( \begin{array}{l} \text{F} \text{apply} \\ \text{U} \end{array} \right) \left\{ \begin{array}{l} function \\ (\text{setf } function) \end{array} \right\} arg^* args)$$

▷ Values of *function* called with *args* and the list elements of *args*. **setfable** if *function* is one of **aref**, **bit**, and **sbit**.

(**funcall** *function* *arg<sup>\*</sup>*) ▷ Values of *function* called with *args*.

(**multiple-value-call** *function* *form<sup>\*</sup>*)

▷ Call *function* with all the values of each *form* as its arguments. Return values returned by function.

(**values-list** *list*) ▷ Return elements of list.

(**values** *foo<sup>\*</sup>*)

▷ Return as multiple values the primary values of the *foos*. **setfable**.

(**multiple-value-list** *form*) ▷ List of the values of form.

(**nth-value** *n* *form*)

▷ Zero-indexed *n*th return value of *form*.

(**complement** *function*)

▷ Return new function with same arguments and same side effects as *function*, but with complementary truth value.

(**constantly** *foo*)

▷ Function of any number of arguments returning *foo*.

(**identity** *foo*) ▷ Return *foo*.

(**function-lambda-expression** *function*)

▷ If available, return lambda expression of *function*, **NIL** if *function* was defined in an environment without bindings, and name of *function*.

(**fdefinition**  $\left\{ \begin{array}{l} foo \\ (\text{setf } foo) \end{array} \right\}$ )

▷ Definition of global function *foo*. **setfable**.

(**fmakunbound** *foo*)

▷ Remove global function or macro definition *foo*.

**call-arguments-limit**  
**lambda-parameters-limit**

▷ Upper bound of the number of function arguments or lambda list parameters, respectively;  $\geq 50$ .

**multiple-values-limit**

▷ Upper bound of the number of values a multiple value can have;  $\geq 20$ .

## 9.4 Macros

Below, macro lambda list (*macro-λ\**) has the form of either

$$([\&whole var] [E] \left\{ \begin{array}{l} var \\ (macro-\lambda^*) \end{array} \right\}^* [E])$$

$$[\&optional \left\{ \begin{array}{l} var \\ \left( \left\{ \begin{array}{l} var \\ (macro-\lambda^*) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \right) \end{array} \right\}^* ] [E]$$

$$[\&rest \left\{ \begin{array}{l} rest-var \\ (macro-\lambda^*) \end{array} \right\} ] [E]$$

$$[\&body \left\{ \begin{array}{l} rest-var \\ (macro-\lambda^*) \end{array} \right\} ] [E]$$

$$[\&key \left\{ \begin{array}{l} var \\ \left( \left\{ \begin{array}{l} var \\ (:key \left\{ \begin{array}{l} var \\ (macro-\lambda^*) \end{array} \right\}) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \right) \end{array} \right\}^* ] [E]$$

$$[\&allow-other-keys] [\&aux \left\{ \begin{array}{l} var \\ (var [init_{\text{NIL}}]) \end{array} \right\}^* ] [E])$$

or

$$([\&whole var] [E] \left\{ \begin{array}{l} var \\ (macro-\lambda^*) \end{array} \right\}^* [E] [\&optional \left\{ \begin{array}{l} var \\ (macro-\lambda^*) \end{array} \right\}^* ] [E] \cdot rest-var).$$

One toplevel *[E]* may be replaced by **&environment** *var*. *supplied-p* is T if there is a corresponding argument. *init* forms can refer to any *init* and *supplied-p* to their left.

$$\left( \begin{array}{l} \text{M} \text{defmacro} \\ \text{F} \text{define-compiler-macro} \end{array} \right) \left\{ \begin{array}{l} foo \\ (\text{setf } foo) \end{array} \right\} (macro-\lambda^*) (\text{declare } \widehat{decl}^*)^*$$

*[doc] form<sup>P\*</sup>*)

▷ Define macro *foo* which on evaluation as (*foo tree*) applies expanded *forms* to arguments from *tree*, which corresponds to *tree-shaped macro-λs*. *forms* are enclosed in an implicit **block** named *foo*.

(**define-symbol-macro** *foo* *form*)

▷ Define symbol macro *foo* which on evaluation evaluates expanded *form*.

(**macrolet**  $((foo (macro-\lambda^*) (\text{declare } \widehat{local-decl}^*)^* [\widehat{doc}] macro-form^*)) (\text{declare } \widehat{decl}^*)^* form^*)$ )

▷ Evaluate *forms* with locally defined mutually invisible macros *foo* which are enclosed in implicit **blocks** of the same name.

(**symbol-macrolet**  $((foo expansion-form^*) (\text{declare } \widehat{decl}^*)^* form^*)$ )

▷ Evaluate *forms* with locally defined symbol macros *foo*.

$$\left( \begin{array}{l} \text{M} \text{defsetf} \end{array} \widehat{function} \left\{ \begin{array}{l} \widehat{updater} [\widehat{doc}] \\ (\text{setf } \lambda^*) (s-var^*) (\text{declare } \widehat{decl}^*)^* [\widehat{doc}] form^* \end{array} \right\} \right)$$

where **defsetf** lambda list (*setf-λ\**) has the form

$$(var^* [\&optional \left\{ \begin{array}{l} var \\ (var [init_{\text{NIL}} [supplied-p]]) \end{array} \right\}^* ]$$

$$[\&rest var] [\&key \left\{ \begin{array}{l} var \\ \left( \left\{ \begin{array}{l} var \\ (:key var) \end{array} \right\} [init_{\text{NIL}} [supplied-p]] \right) \end{array} \right\}^* ])$$

**by**  $\{step\mid function\}_{\overline{cdr}}$   
 ▷ Specify the (positive) decrement or increment or the *function* of one argument returning the next part of the list.

**=** *foo* **[then** *bar*  $\overline{foo}$   
 ▷ Bind *var* initially to *foo* and later to *bar*.

**across** *vector*  
 ▷ Bind *var* to successive elements of *vector*.

**being** **{the|each}**  
 ▷ Iterate over a hash table or a package.

**{hash-key|hash-keys} {of|in}** *hash-table* **[using** **(hash-value** *value*)  
 ▷ Bind *var* successively to the keys of *hash-table*; bind *value* to corresponding values.

**{hash-value|hash-values} {of|in}** *hash-table* **[using** **(hash-key** *key*)  
 ▷ Bind *var* successively to the values of *hash-table*; bind *key* to corresponding keys.

**{symbol|symbols|present-symbol|present-symbols|external-symbol|external-symbols} [{of|in}** *package*  $\overline{packages}$   
 ▷ Bind *var* successively to the accessible symbols, or the present symbols, or the external symbols respectively, of *package*.

**{do|doing}** *form*<sup>+</sup>  
 ▷ Evaluate *forms* in every iteration.

**{if|when|unless}** *test* *i-clause* **{and** *j-clause*<sup>\*</sup> **[else** *k-clause* **{and** *l-clause*<sup>\*</sup> **]** **end**  
 ▷ If *test* returns T, T, or NIL, respectively, evaluate *i-clause* and *j-clauses*; otherwise, evaluate *k-clause* and *l-clauses*.

**it** ▷ Inside *i-clause* or *k-clause*: value of *test*.

**return** *{form|it}*  
 ▷ Return immediately, skipping any **finally** parts, with values of *form* or **it**.

**{collect|collecting}** *{form|it}* **[into** *list*  
 ▷ Collect values of *form* or **it** into *list*. If no *list* is given, collect into an anonymous list which is returned after termination.

**{append|appending|nconc|nconcing}** *{form|it}* **[into** *list*  
 ▷ Concatenate values of *form* or **it**, which should be lists, into *list* by the means of  $\overline{Fu}$  **append** or  $\overline{Fu}$  **nconc**, respectively. If no *list* is given, collect into an anonymous list which is returned after termination.

**{count|counting}** *{form|it}* **[into** *n*] *[type]*  
 ▷ Count the number of times the value of *form* or of **it** is T. If no *n* is given, count into an anonymous variable which is returned after termination.

**{sum|summing}** *{form|it}* **[into** *sum*] *[type]*  
 ▷ Calculate the sum of the primary values of *form* or of **it**. If no *sum* is given, sum into an anonymous variable which is returned after termination.

**{maximize|maximizing|minimize|minimizing}** *{form|it}* **[into** *max-min*] *[type]*  
 ▷ Determine the maximum or minimum, respectively, of the primary values of *form* or of **it**. If no *max-min* is given, use an anonymous variable which is returned after termination.

**{initially|finally}** *form*<sup>+</sup>  
 ▷ Evaluate *forms* before begin, or after end, respectively, of iterations.

**repeat** *num*  
 ▷ Terminate **loop** after *num* iterations; *num* is evaluated once.

$\left(\overset{M}{\text{case}}\ test\ \left(\left\{\overline{key}^*\right\}\ \overline{foo}^*\right)^*\ \left[\left(\left\{\overline{otherwise}\right\}\ \overline{bar}^*\right)\overline{NIL}\right]\right)$   
 ▷ Return the values of the first *foo*<sup>\*</sup> one of whose *keys* is **eq** *test*. Return values of bars if there is no matching *key*.

$\left(\left\{\overset{M}{\text{ecase}}\right\}\ \overline{ccase}\ \left(\left\{\overline{key}^*\right\}\ \overline{foo}^*\right)^*\right)$   
 ▷ Return the values of the first *foo*<sup>\*</sup> one of whose *keys* is **eq** *test*. Signal non-correctable/correctable **type-error** and return NIL if there is no matching *key*.

$\left(\overset{M}{\text{and}}\ \overline{form}^*\overline{NIL}\right)$   
 ▷ Evaluate *forms* from left to right. Immediately return NIL if one *form*'s value is NIL. Return values of last form otherwise.

$\left(\overset{M}{\text{or}}\ \overline{form}^*\overline{NIL}\right)$   
 ▷ Evaluate *forms* from left to right. Immediately return primary value of first non-NIL-evaluating form, or all values if last *form* is reached. Return NIL if no *form* returns T.

$\left(\overset{SO}{\text{progn}}\ \overline{form}^*\overline{NIL}\right)$   
 ▷ Evaluate *forms* sequentially. Return values of last form.

$\left(\overset{SO}{\text{multiple-value-prog1}}\ \overline{form-r}\ \overline{form}^*\right)$

$\left(\overset{M}{\text{prog1}}\ \overline{form-r}\ \overline{form}^*\right)$

$\left(\overset{M}{\text{prog2}}\ \overline{form-a}\ \overline{form-r}\ \overline{form}^*\right)$

▷ Evaluate forms in order. Return values/primary value, respectively, of *form-r*.

$\left(\overset{SO}{\text{let}}\ \overline{let}^*\ \left(\left\{\overline{name}\ \left[\overline{value}\overline{NIL}\right]\right\}^*\right)\ \left(\overline{declare}\ \overline{decl}^*\right)^*\ \overline{form}^*\right)$

▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return values of forms.

$\left(\overset{M}{\text{prog}}\ \overline{prog}^*\ \left(\left\{\overline{name}\ \left[\overline{value}\overline{NIL}\right]\right\}^*\right)\ \left(\overline{declare}\ \overline{decl}^*\right)^*\ \left\{\overline{tag}\ \overline{form}\right\}^*\right)$

▷ Evaluate  $\overline{tagbody}$ -like body with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return NIL or explicitly **returned** values. Implicitly, the whole form is a **block** named NIL.

$\left(\overset{SO}{\text{progv}}\ \overline{symbols}\ \overline{values}\ \overline{form}^*\right)$

▷ Evaluate *forms* with locally established dynamic bindings of *symbols* to *values* or NIL. Return values of forms.

$\left(\overset{SO}{\text{unwind-protect}}\ \overline{protected}\ \overline{cleanup}^*\right)$

▷ Evaluate *protected* and then, no matter how control leaves *protected*, *cleanups*. Return values of protected.

$\left(\overset{M}{\text{destructuring-bind}}\ \overline{destruct-\lambda}\ \overline{bar}\ \left(\overline{declare}\ \overline{decl}^*\right)^*\ \overline{form}^*\right)$

▷ Evaluate *forms* with variables from tree *destruct-λ* bound to corresponding elements of tree *bar*, and return their values. *destruct-λ* resembles *macro-λ* (section 9.4), but without any **&environment** clause.

$\left(\overset{M}{\text{multiple-value-bind}}\ \left(\overline{var}^*\right)\ \overline{values-form}\ \left(\overline{declare}\ \overline{decl}^*\right)^*\ \overline{body-form}^*\right)$

▷ Evaluate *body-forms* with *vars* lexically bound to the return values of *values-form*. Return values of body-forms.

$\left(\overset{SO}{\text{block}}\ \overline{name}\ \overline{form}^*\right)$

▷ Evaluate *forms* in a lexical environment, and return their values unless interrupted by **return-from**.

$\left(\overset{SO}{\text{return-from}}\ \overline{foo}\ \left[\overline{result}\overline{NIL}\right]\right)$

$\left(\overset{M}{\text{return}}\ \left[\overline{result}\overline{NIL}\right]\right)$

▷ Have nearest enclosing **block** named *foo*/named NIL, respectively, return with values of *result*.

$\left(\overset{SO}{\text{tagbody}}\ \left\{\overline{tag}\ \overline{form}\right\}^*\right)$

▷ Evaluate *forms* in a lexical environment. *tags* (symbols or integers) have lexical scope and dynamic extent, and are targets for **go**. Return NIL.

- (<sup>so</sup>go *tag*)
  - ▷ Within the innermost possible enclosing <sup>so</sup>tagbody, jump to a tag *eq* *tag*.
- (<sup>socatch</sup> *tag* *form*<sup>P<sub>k</sub></sup>)
  - ▷ Evaluate *forms* and return their values unless interrupted by **throw**.
- (<sup>sothrow</sup> *tag* *form*)
  - ▷ Have the nearest dynamically enclosing <sup>so</sup>catch with a tag **eq** *tag* return with the values of *form*.
- (<sup>Fu</sup>sleep *n*)
  - ▷ Wait *n* seconds, return NIL.

### 9.6 Iteration

- (<sup>M</sup>do\* {*var* [*start* [*step*]]})<sup>\*</sup> (*stop* *result*<sup>P<sub>k</sub></sup>) (declare *decl*<sup>\*</sup>)<sup>\*</sup>
  - ▷ Evaluate <sup>so</sup>tagbody-like body with *vars* successively bound according to the values of the corresponding *start* and *step* forms. *vars* are bound in parallel/sequentially, respectively. Stop iteration when *stop* is T. Return values of *result*. Implicitly, the whole form is a <sup>so</sup>block named NIL.
- (<sup>M</sup>dotimes (*var* *i* [*result*<sub>NIL</sub>]) (declare *decl*<sup>\*</sup>)<sup>\*</sup> {*tag*|*form*)<sup>\*</sup>
  - ▷ Evaluate <sup>so</sup>tagbody-like body with *var* successively bound to integers from 0 to *i* - 1. Upon evaluation of *result*, *var* is *i*. Implicitly, the whole form is a <sup>so</sup>block named NIL.
- (<sup>M</sup>dolist (*var* *list* [*result*<sub>NIL</sub>]) (declare *decl*<sup>\*</sup>)<sup>\*</sup> {*tag*|*form*)<sup>\*</sup>
  - ▷ Evaluate <sup>so</sup>tagbody-like body with *var* successively bound to the elements of *list*. Upon evaluation of *result*, *var* is NIL. Implicitly, the whole form is a <sup>so</sup>block named NIL.

### 9.7 Loop Facility

- (<sup>M</sup>loop *form*<sup>\*</sup>)
  - ▷ **Simple Loop**. If *forms* do not contain any atomic Loop Facility keywords, evaluate them forever in an implicit <sup>so</sup>block named NIL.
- (<sup>M</sup>loop *clause*<sup>\*</sup>)
  - ▷ **Loop Facility**. For Loop Facility keywords see below and Figure 1.
- named *n<sub>NIL</sub>*
  - ▷ Give <sup>M</sup>loop's implicit <sup>so</sup>block a name.
- {with {*var-s* (*var-s*<sup>\*</sup>)} [*d-type*] [= *foo*]}<sup>+</sup>
  - {and {*var-p* (*var-p*<sup>\*</sup>)} [*d-type*] [= *bar*]}<sup>\*</sup>
  - where destructuring type specifier *d-type* has the form {*fixnum*|*float*|*T*|*NIL*|{*of-type* {*type* (*type*<sup>\*</sup>)}}}
  - ▷ Initialize (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel.
- {{for|as} {*var-s* (*var-s*<sup>\*</sup>)} [*d-type*]}<sup>+</sup> {and {*var-p* (*var-p*<sup>\*</sup>)} [*d-type*]}<sup>\*</sup>
  - ▷ Begin of iteration control clauses. Initialize and step (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel. Destructuring type specifier *d-type* as with **with**.
  - {upfrom|from|downfrom} *start*
    - ▷ Start stepping with *start*
  - {upto|downto|to|below|above} *form*
    - ▷ Specify *form* as the end value for stepping.
  - {in|on} *list*
    - ▷ Bind *var* to successive elements/tails, respectively, of *list*.

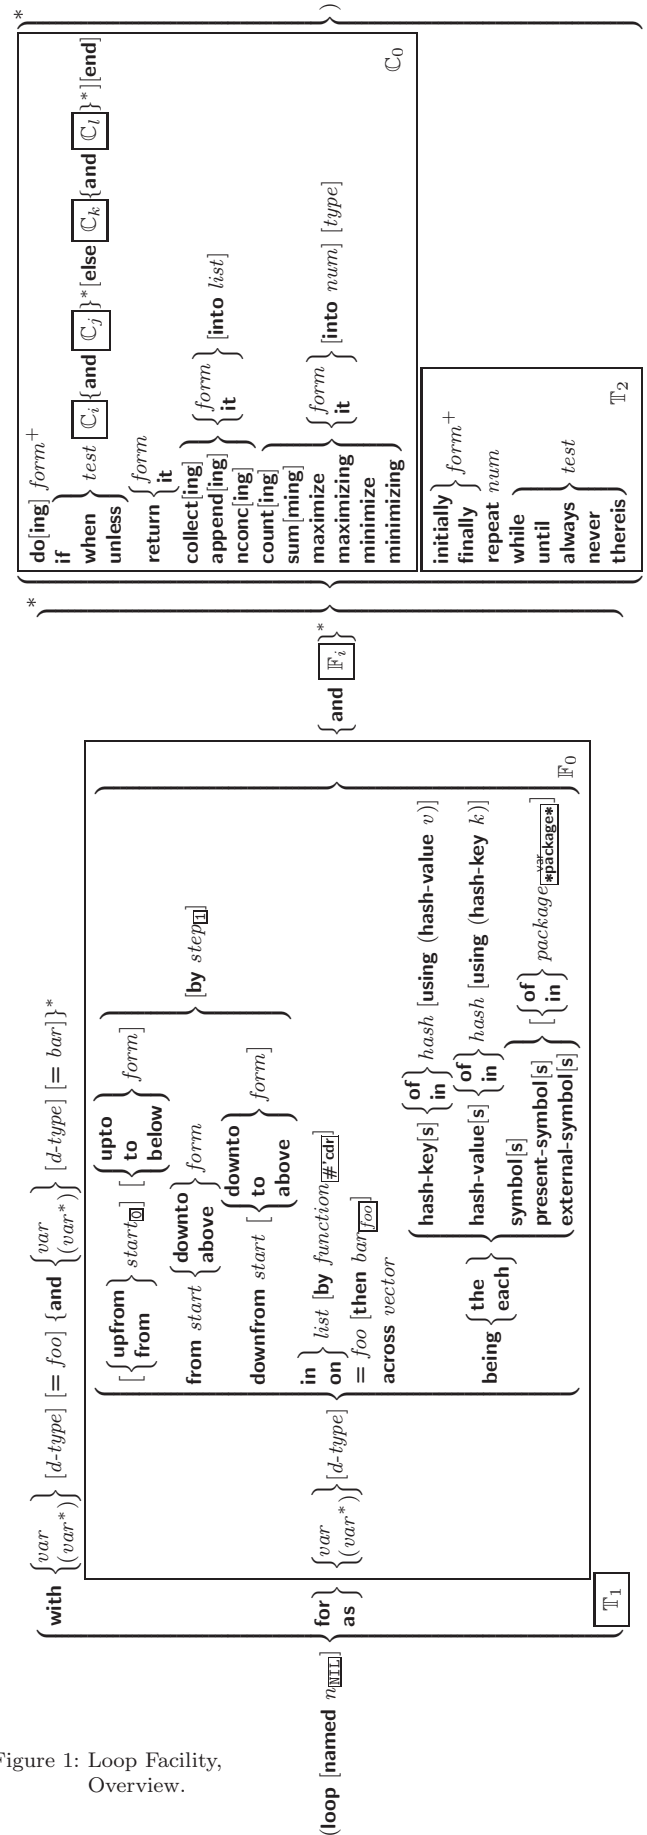

Figure 1: Loop Facility, Overview.

<sup>M</sup>(**define-method-combination** *c-type*

$$\left\{ \begin{array}{l} \text{:documentation } \widehat{string} \\ \text{:identity-with-one-argument } \widehat{bool}_{\text{NIL}} \\ \text{:operator } \widehat{operator}_{\text{c-type}} \end{array} \right\}$$

▷ **Short Form.** Define new **method-combination** *c-type*. In a generic function using *c-type*, evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, return from the calling **call-next-method** or from the generic function, respectively, the values of (*operator* (*primary-method* *gen-arg\**)\*), *gen-arg\** being the arguments of the generic function. The *primary-methods* are ordered  $\left[ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right]$  (specified as *c-arg* in **defgeneric**). Using *c-type* as the *qualifier* in **defmethod** makes the method primary.

<sup>M</sup>(**define-method-combination** *c-type* (*ord-λ\**) ((*group*

$$\left\{ \begin{array}{l} * \\ \text{(qualifier* } [ * ] \text{)} \\ \text{predicate} \\ \text{:description } \widehat{control} \\ \text{:order } \left\{ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right\} \widehat{\text{most-specific-first}} \\ \text{:required } \widehat{bool} \\ \left( \begin{array}{l} \text{:arguments } \widehat{\text{method-combination-}\lambda^*} \\ \text{:generic-function } \widehat{symbol} \\ \text{(declare } \widehat{\text{decl}}^* \text{)} \\ \widehat{doc} \end{array} \right) \end{array} \right\} \widehat{body}^*$$

▷ **Long Form.** Define new **method-combination** *c-type*. A call to a generic function using *c-type* will be equivalent to a call to the forms returned by *body\** with *ord-λ\** bound to *c-arg\** (cf. **defgeneric**), with *symbol* bound to the generic function, with *method-combination-λ\** bound to the arguments of the generic function, and with *groups* bound to lists of methods. An applicable method becomes a member of the left-most *group* whose *predicate* or *qualifiers* match. Methods can be called via **call-method**. Lambda lists (*ord-λ\**) and (*method-combination-λ\**) according to *ord-λ* on p. 18, the latter enhanced by an optional **&whole** argument.

<sup>M</sup>(**call-method**  $\left\{ \begin{array}{l} \widehat{method} \\ \text{(make-method } \widehat{form} \text{)} \end{array} \right\} \left[ \left( \left\{ \begin{array}{l} \widehat{\text{next-method}} \\ \text{(make-method } \widehat{form} \text{)} \end{array} \right\}^* \right) \right]$ )

▷ From within an effective method form, call *method* with the arguments of the generic function and with information about its *next-methods*; return its values.

## 11 Conditions and Errors

For standardized condition types cf. Figure 2 on page 32.

<sup>M</sup>(**define-condition** *foo* (*parent-type\** **condition**)

$$\left\{ \begin{array}{l} \text{slot} \\ \left( \begin{array}{l} \text{:reader } \widehat{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \widehat{writer} \\ \text{(setf } \widehat{writer} \text{)} \end{array} \right\}^* \\ \text{:accessor } \widehat{accessor}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \widehat{\text{instance}} \end{array} \right\} \\ \text{:initarg } \widehat{\text{initarg-name}}^* \\ \text{:initform } \widehat{form} \\ \text{:type } \widehat{type} \\ \text{:documentation } \widehat{\text{slot-doc}} \end{array} \right\} \\ \left( \begin{array}{l} \text{:default-initargs } \{ \widehat{\text{name value}}^* \} \\ \text{:documentation } \widehat{\text{condition-doc}} \\ \text{:report } \left\{ \begin{array}{l} \widehat{string} \\ \widehat{\text{report-function}} \end{array} \right\} \end{array} \right) \end{array} \right\}$$

**{while|until}** *test*

▷ Continue iteration until *test* returns NIL or T, respectively.

**{always|never}** *test*

▷ Terminate **loop** returning NIL and skipping any **finally** parts as soon as *test* is NIL or T, respectively. Otherwise continue **loop** with its default return value set to T.

**thereis** *test*

▷ Terminate **loop** when *test* is T and return value of *test*, skipping any **finally** parts. Otherwise continue **loop** with its default return value set to NIL.

<sup>M</sup>(**loop-finish**)

▷ Terminate **loop** immediately executing any **finally** clauses and returning any accumulated results.

## 10 CLOS

### 10.1 Classes

<sup>Fu</sup>(**exists-p** *foo bar*) ▷ T if *foo* has a slot *bar*.

<sup>Fu</sup>(**slot-boundp** *instance slot*) ▷ T if *slot* in *instance* is bound.

<sup>M</sup>(**defclass** *foo* (*superclass\** **standard-object**)

$$\left\{ \begin{array}{l} \text{slot} \\ \left( \begin{array}{l} \text{:reader } \widehat{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \widehat{writer} \\ \text{(setf } \widehat{writer} \text{)} \end{array} \right\}^* \\ \text{:accessor } \widehat{accessor}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \widehat{\text{instance}} \end{array} \right\} \\ \text{:initarg } \widehat{\text{initarg-name}}^* \\ \text{:initform } \widehat{form} \\ \text{:type } \widehat{type} \\ \text{:documentation } \widehat{\text{slot-doc}} \end{array} \right\} \\ \left( \begin{array}{l} \text{:default-initargs } \{ \widehat{\text{name value}}^* \} \\ \text{:documentation } \widehat{\text{class-doc}} \\ \text{:metaclass } \widehat{\text{name}}_{\text{standard-class}} \end{array} \right) \end{array} \right\}$$

▷ Define, as a subclass of *superclasses*, class *foo*. In a new instance *i*, a *slot*'s value defaults to *form* unless set via *initarg-name*; it is readable via (*reader i*) or (*accessor i*), and writable via (*writer value i*) or (**setf** (*accessor i*) *value*). With **:allocation :class**, *slot* is shared by all instances of class *foo*.

<sup>Fu</sup>(**find-class** *symbol* [*errorp*] [*environment*])  
▷ Return class named *symbol*. **setfable**.

<sup>Fu</sup>(**make-instance** *class*  $\{ \widehat{\text{initarg value}}^* \}$  *other-keyarg\**)  
▷ Make new instance of *class*.

<sup>Fu</sup>(**reinitialize-instance** *instance*  $\{ \widehat{\text{initarg value}}^* \}$  *other-keyarg\**)  
▷ Change local slots of *instance* according to *initargs*.

<sup>Fu</sup>(**slot-value** *foo slot*) ▷ Return value of *slot* in *foo*. **setfable**.

<sup>Fu</sup>(**slot-makunbound** *instance slot*)  
▷ Make *slot* in *instance* unbound.

<sup>M</sup> $\left\{ \begin{array}{l} \text{with-slots } (\{ \widehat{\text{slot}} (\widehat{\text{var}} \widehat{\text{slot}})^* \}) \\ \text{with-accessors } ((\widehat{\text{var}} \widehat{\text{accessor}})^*) \end{array} \right\} \widehat{\text{instance}} \left( \text{declare } \widehat{\text{decl}}^* \right)^* \widehat{\text{form}}^*$   
▷ Return values of *forms* after evaluating them in a lexical environment with slots of *instance* visible as **setfable slots** or *vars*/with *accessors* of *instance* visible as **setfable vars**.

<sup>Fu</sup>(**class-name** *class*)  
<sup>Fu</sup>(**setf class-name** *new-name class*) ▷ Get/set name of *class*.

<sup>Fu</sup>(**class-of** *foo*) ▷ Class *foo* is a direct instance of.

(<sup>EF</sup>**change-class** *instance new-class*  $\{:\text{initarg value}\}^* \text{other-keyarg}^*$ )  
 ▷ Change class of *instance* to *new-class*.

(<sup>EF</sup>**make-instances-obsolete** *class*) ▷ Update instances of *class*.

(<sup>EF</sup>**initialize-instance** *instance*)  
 (<sup>EF</sup>**update-instance-for-different-class** *previous current*)  
 $\{:\text{initarg value}\}^* \text{other-keyarg}^*$ )  
 ▷ Its primary method sets slots on behalf of <sup>EF</sup>**make-instance**/of <sup>EF</sup>**change-class** by means of <sup>EF</sup>**shared-initialize**.

(<sup>EF</sup>**update-instance-for-redefined-class** *instances added-slots discarded-slots property-list*  $\{:\text{initarg value}\}^* \text{other-keyarg}^*$ )  
 ▷ Its primary method sets slots on behalf of <sup>EF</sup>**make-instances-obsolete** by means of <sup>EF</sup>**shared-initialize**.

(<sup>EF</sup>**allocate-instance** *class*  $\{:\text{initarg value}\}^* \text{other-keyarg}^*$ )  
 ▷ Return uninitialized *instance* of *class*. Called by <sup>EF</sup>**make-instance**.

(<sup>EF</sup>**shared-initialize** *instance*  $\left\{ \begin{array}{l} \text{slots} \\ \text{T} \end{array} \right\} \{:\text{initarg value}\}^* \text{other-keyarg}^*$ )  
 ▷ Fill *instance*'s slots using *initargs* and **initform** forms.

(<sup>EF</sup>**slot-missing** *class object slot*  $\left\{ \begin{array}{l} \text{setf} \\ \text{slot-boundp} \\ \text{slot-makunbound} \\ \text{slot-value} \end{array} \right\} [\text{value}]$ )  
 ▷ Called in case of attempted access to missing *slot*. Its primary method signals **error**.

(<sup>EF</sup>**slot-unbound** *class instance slot*)  
 ▷ Called by **slot-value** in case of unbound *slot*. Its primary method signals **unbound-slot**.

## 10.2 Generic Functions

(<sup>Fu</sup>**next-method-p**) ▷ **T** if enclosing method has a next method.

(<sup>M</sup>**defgeneric**  $\left\{ \begin{array}{l} \text{foo} \\ (\text{setf } \text{foo}) \end{array} \right\} (\text{required-var}^* [\&\text{optional} \left\{ \begin{array}{l} \text{var} \\ (\text{var}) \end{array} \right\}^*]) [\&\text{rest} \\ \text{var}] [\&\text{key} \left\{ \begin{array}{l} \text{var} \\ (\text{var} | (:key \text{var})) \end{array} \right\}^*] [\&\text{allow-other-keys}])$   
 $\left\{ \begin{array}{l} (:argument-precedence-order \text{required-var}^+) \\ (\text{declare } (\text{optimize } \text{arg}^*)^+) \\ (:documentation \text{string}) \\ (:generic-function-class \text{class} \text{standard-generic-function}) \\ (:method-class \text{class} \text{standard-method}) \\ (:method-combination \text{c-type} \text{standard} \text{c-arg}^*) \\ (:method \text{defmethod-args})^* \end{array} \right\}$ )  
 ▷ Define generic function *foo*. *defmethod-args* resemble those of <sup>M</sup>**defmethod**. For *c-type* see section 10.3.

(<sup>Fu</sup>**ensure-generic-function**  $\left\{ \begin{array}{l} \text{foo} \\ (\text{setf } \text{foo}) \end{array} \right\}$   
 $\left\{ \begin{array}{l} (:argument-precedence-order \text{required-var}^+) \\ (:declare (\text{optimize } \text{arg}^*)^+) \\ (:documentation \text{string}) \\ (:generic-function-class \text{class}) \\ (:method-class \text{class}) \\ (:method-combination \text{c-type} \text{c-arg}^*) \\ (:lambda-list \text{lambda-list}) \\ (:environment \text{environment}) \end{array} \right\}$ )  
 ▷ Define or modify generic function *foo*. **generic-function-class** and **lambda-list** have to be compatible with a pre-existing generic function or with existing methods, respectively. Changes to **method-class** do not propagate to existing methods. For *c-type* see section 10.3.

(<sup>M</sup>**defmethod**  $\left\{ \begin{array}{l} \text{foo} \\ (\text{setf } \text{foo}) \end{array} \right\} \left\{ \begin{array}{l} \text{:before} \\ \text{:after} \\ \text{:around} \\ \text{qualifier}^* \end{array} \right\} \left[ \begin{array}{l} \text{primary method} \\ \end{array} \right]$   
 $\left\{ \begin{array}{l} \text{var} \\ (\text{spec-var} \left\{ \begin{array}{l} \text{class} \\ (\text{eql } \text{bar}) \end{array} \right\})^* \end{array} \right\} [\&\text{optional}]$   
 $\left\{ \begin{array}{l} \text{var} \\ (\text{var} [\text{init } [\text{supplied-p}]])^* \end{array} \right\} [\&\text{rest } \text{var}] [\&\text{key}]$   
 $\left\{ \begin{array}{l} \text{var} \\ (\text{var} \left\{ \begin{array}{l} \text{:key } \text{var} \end{array} \right\})^* \end{array} \right\} [\text{init } [\text{supplied-p}]]^* [\&\text{allow-other-keys}]$   
 $[\&\text{aux} \left\{ \begin{array}{l} \text{var} \\ (\text{var} [\text{init}])^* \end{array} \right\}] \left\{ \begin{array}{l} (\text{declare } \widehat{\text{decl}}^*)^* \\ \text{doc} \end{array} \right\} \text{form}^*$ )

▷ Define new method for generic function *foo*. *spec-vars* specialize to either being of *class* or being **eql** *bar*, respectively. On invocation, *vars* and *spec-vars* of the new method act like parameters of a function with body *form*<sup>\*</sup>. *forms* are enclosed in an implicit **block** *foo*. Applicable *qualifiers* depend on the **method-combination** type; see section 10.3.

(<sup>EF</sup>**add-method**  $\left\{ \begin{array}{l} \text{generic-function} \\ \text{method} \end{array} \right\}$ )  
 (<sup>EF</sup>**remove-method**  $\left\{ \begin{array}{l} \text{generic-function} \\ \text{method} \end{array} \right\}$ )  
 ▷ Add (if necessary) or remove (if any) *method* to/from *generic-function*.

(<sup>EF</sup>**find-method** *generic-function qualifiers specializers* [*error*])  
 ▷ Return suitable *method*, or signal **error**.

(<sup>EF</sup>**compute-applicable-methods** *generic-function args*)  
 ▷ List of methods suitable for *args*, most specific first.

(<sup>Fu</sup>**call-next-method** *arg*  $\left[ \begin{array}{l} \text{current args} \\ \end{array} \right]$ )  
 ▷ From within a method, call next method with *args*; return its values.

(<sup>EF</sup>**no-applicable-method** *generic-function arg*<sup>\*</sup>)  
 ▷ Called on invocation of *generic-function* on *args* if there is no applicable method. Default method signals **error**.

(<sup>Fu</sup>**invalid-method-error** *method*)  
 (<sup>Fu</sup>**method-combination-error** *control arg*<sup>\*</sup>)  
 ▷ Signal **error** on applicable method with invalid qualifiers, or on method combination. For *control* and *args* see **format**, p. 38.

(<sup>EF</sup>**no-next-method** *generic-function method arg*<sup>\*</sup>)  
 ▷ Called on invocation of **call-next-method** when there is no next method. Default method signals **error**.

(<sup>EF</sup>**function-keywords** *method*)  
 ▷ Return list of keyword parameters of *method* and **T** if other keys are allowed.

(<sup>EF</sup>**method-qualifiers** *method*) ▷ List of qualifiers of *method*.

## 10.3 Method Combination Types

### standard

▷ Evaluate most specific **around** method supplying the values of the generic function. From within this method, <sup>Fu</sup>**call-next-method** can call less specific **around** methods if there are any. If not, or if there are no **around** methods at all, call all **before** methods, most specific first, and the most specific primary method which supplies the values of the calling <sup>Fu</sup>**call-next-method** if any, or of the generic function; and which can call less specific primary methods via <sup>Fu</sup>**call-next-method**. After its return, call all **after** methods, least specific first.

### and|or|append|list|nconc|progn|max|min|+

▷ Simple built-in **method-combination** types; have the same usage as the *c-types* defined by the short form of <sup>M</sup>**define-method-combination**.

▷ Evaluate *form* with dynamically established restarts *foo*. Return values of *form* or, if by (<sup>Fu</sup>`invoke-restart foo arg*`) one restart *foo* is called, use *string* or *report-function* (of a stream) to print a description of restart *foo* and return the values of its *restart-forms*. <sup>Fu</sup>*arg-function* supplies appropriate *args* if *foo* is called by `invoke-restart-interactively`. If (*test-function condition*) returns T, *foo* is made visible under *condition*. *arg\** matches (*ord-λ\**); see p. 18 for the latter.

(<sup>M</sup>`restart-bind` ((<sup>widehat</sup><sub>NIL</sub> *restart-function*)  
{  
:interactive-function *function*  
:report-function *function*  
:test-function *function*  
})\* *form*<sup>Pk</sup>)

▷ Return values of *forms* evaluated with *restarts* dynamically bound to *restart-functions*.

(<sup>Fu</sup>`invoke-restart restart arg*`)  
(<sup>Fu</sup>`invoke-restart-interactively restart`)

▷ Call function associated with *restart* with arguments given or prompted for, respectively. If *restart* function returns, return its values.

{<sup>Fu</sup>`compute-restarts`  
<sup>Fu</sup>`find-restart name`} [*condition*]

▷ Return list of all restarts, or innermost *restart name*, respectively, out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. Return NIL if search is unsuccessful.

(<sup>Fu</sup>`restart-name restart`) ▷ Name of *restart*.

{<sup>Fu</sup>`abort`  
<sup>Fu</sup>`muffle-warning`  
<sup>Fu</sup>`continue`  
<sup>Fu</sup>`store-value value`  
<sup>Fu</sup>`use-value value`} [*condition*<sub>NIL</sub>]

▷ Transfer control to innermost applicable restart with same name (i.e. `abort`, ..., `continue` ...) out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. If no restart is found, signal **control-error** for <sup>Fu</sup>`abort` and <sup>Fu</sup>`muffle-warning`, or return NIL for the rest.

(<sup>M</sup>`with-condition-restarts condition restarts formPk)`

▷ Evaluate *forms* with *restarts* dynamically associated with *condition*. Return values of *forms*.

(<sup>Fu</sup>`arithmetic-error-operation condition`)  
(<sup>Fu</sup>`arithmetic-error-operands condition`)

▷ List of function or of its operands respectively, used in the operation which caused *condition*.

(<sup>Fu</sup>`cell-error-name condition`)

▷ Name of cell which caused *condition*.

(<sup>Fu</sup>`unbound-slot-instance condition`)

▷ Instance with unbound slot which caused *condition*.

(<sup>Fu</sup>`print-not-readable-object condition`)

▷ The object not readably printable under *condition*.

(<sup>Fu</sup>`package-error-package condition`)

(<sup>Fu</sup>`file-error-pathname condition`)

(<sup>Fu</sup>`stream-error-stream condition`)

▷ Package, path, or stream, respectively, which caused the *condition* of indicated type.

(<sup>Fu</sup>`type-error-datum condition`)

(<sup>Fu</sup>`type-error-expected-type condition`)

▷ Object which caused *condition* of type **type-error**, or its expected type, respectively.

(<sup>Fu</sup>`simple-condition-format-control condition`)

(<sup>Fu</sup>`simple-condition-format-arguments condition`)

▷ Return format control or list of format arguments, respectively, of *condition*.

<sup>var</sup>`*break-on-signals*`<sub>NIL</sub>

▷ Condition type debugger is to be invoked on.

<sup>var</sup>`*debugger-hook*`<sub>NIL</sub>

▷ Function of condition and function itself. Called before debugger.

## 12 Types and Classes

For any class, there is always a corresponding type of the same name.

(<sup>Fu</sup>`typep foo type [environment`<sub>NIL</sub>]) ▷ T if *foo* is of *type*.

(<sup>Fu</sup>`subtypep type-a type-b [environment]`)

▷ Return T if *type-a* is a recognizable subtype of *type-b*, and NIL if the relationship could not be determined.

(<sup>SO</sup>`widehat type form`) ▷ Declare values of *form* to be of *type*.

(<sup>Fu</sup>`coerce object type`) ▷ Coerce object into *type*.

(<sup>M</sup>`typecase foo (widehat type a-formPk)* [(T otherwise b-formNILPk)])`

▷ Return values of the *a-forms* whose *type* is *foo* of. Return values of *b-forms* if no *type* matches.

{<sup>M</sup>`ctypecase`  
<sup>M</sup>`etypecase`} *foo* (*widehat form*<sup>Pk</sup>)\*

▷ Return values of the *forms* whose *type* is *foo* of. Signal correctable/non-correctable error, respectively if no *type* matches.

(<sup>Fu</sup>`type-of foo`) ▷ Type of *foo*.

(<sup>M</sup>`check-type place type [string`<sub>{a|an} type</sub>])

▷ Signal correctable **type-error** if *place* is not of *type*. Return NIL.

(<sup>Fu</sup>`stream-element-type stream`) ▷ Return type of *stream* objects.

(<sup>Fu</sup>`array-element-type array`) ▷ Element type *array* can hold.

(<sup>Fu</sup>`upgraded-array-element-type type [environment`<sub>NIL</sub>])

▷ Element type of most specialized array capable of holding elements of *type*.

(<sup>M</sup>`deftype foo (macro-λ*) (declare widehat decl)* [widehat doc] formPk)`

▷ Define type *foo* which when referenced as (*foo arg\**) applies expanded *forms* to *args* returning the new type. For (*macro-λ\**) see p. 19 but with default value of \* instead of NIL. *forms* are enclosed in an implicit **block** named *foo*.

(`eql foo`) ▷ Specifier for a type comprising *foo* or *foos*.  
(`member foo*`)

(`satisfies predicate`) ▷ Type specifier for all objects satisfying *predicate*.

(`mod n`) ▷ Type specifier for all non-negative integers < *n*.

(`not type`) ▷ Complement of type.

(`and type*`<sub>NIL</sub>) ▷ Type specifier for intersection of *types*.

(`or type*`<sub>NIL</sub>) ▷ Type specifier for union of *types*.

(`values type*` [`&optional type*` [`&rest other-args`]])  
▷ Type specifier for multiple values.

\* ▷ As a type argument (cf. Figure 2): no restriction.

(<sup>gF</sup>**print-object** *object* *stream*)  
 ▷ Print *object* to *stream*. Called by the Lisp printer.

(<sup>M</sup>**print-unreadable-object** (*foo* *stream* {<sup>NI</sup>**:type** *bool* <sup>NI</sup>**:identity** *bool*}) *form*<sup>P\*</sup>)  
 ▷ Enclosed in #< and >, print *foo* by means of *forms* to *stream*. Return **NIL**.

(<sup>Fu</sup>**terpri** [*stream* <sup>var</sup>**\*standard-output\***])  
 ▷ Output a newline to *stream*. Return **NIL**.

(<sup>Fu</sup>**fresh-line**) [*stream* <sup>var</sup>**\*standard-output\***])  
 ▷ Output a newline to *stream* and return **T** unless *stream* is already at the start of a line.

(<sup>Fu</sup>**write-char** *char* [*stream* <sup>var</sup>**\*standard-output\***])  
 ▷ Output *char* to *stream*.

{<sup>Fu</sup>**write-string**  
<sup>Fu</sup>**write-line**}

*string* [*stream* <sup>var</sup>**\*standard-output\*** [{**:start** *start*<sub>0</sub>}]  
 {**:end** *end*<sub>NI</sub>}]])  
 ▷ Write *string* to *stream* without/with a trailing newline.

(<sup>Fu</sup>**write-byte** *byte* *stream*) ▷ Write *byte* to binary *stream*.

(<sup>Fu</sup>**write-sequence** *sequence* *stream* {**:start** *start*<sub>0</sub>  
**:end** *end*<sub>NI</sub>})  
 ▷ Write elements of *sequence* to binary or character *stream*.

{<sup>Fu</sup>**write**  
<sup>Fu</sup>**write-to-string**}

*foo* {**:array** *bool*  
**:base** *radix*  
**:case** {**:uppercase**  
**:downcase**  
**:capitalize**  
**:circle** *bool*  
**:escape** *bool*  
**:gensym** *bool*  
**:length** {*int* **NIL**}  
**:level** {*int* **NIL**}  
**:lines** {*int* **NIL**}  
**:miser-width** {*int* **NIL**}  
**:pprint-dispatch** *dispatch-table*  
**:pretty** *bool*  
**:radix** *bool*  
**:readably** *bool*  
**:right-margin** {*int* **NIL**}  
**:stream** *stream* <sup>var</sup>**\*standard-output\***}

▷ Print *foo* to *stream* and return *foo*, or print *foo* into *string*, respectively, after dynamically setting printer variables corresponding to keyword parameters (**\*print-bar\*** becoming **:bar**). (**:stream** keyword with **write** only.)

(<sup>Fu</sup>**pprint-fill** *stream* *foo* [*parenthesis*<sub>0</sub> [*noop*]])

(<sup>Fu</sup>**pprint-tabular** *stream* *foo* [*parenthesis*<sub>0</sub> [*noop* [*n*<sub>0</sub>]])])

(<sup>Fu</sup>**pprint-linear** *stream* *foo* [*parenthesis*<sub>0</sub> [*noop*]])

▷ Print *foo* to *stream*. If *foo* is a list, print as many elements per line as possible; do the same in a table with a column width of *n* ems; or print either all elements on one line or each on its own line, respectively. Return **NIL**. Usable with **format** directive **~//**.

(<sup>M</sup>**pprint-logical-block** (*stream* *list* {**:prefix** *string*  
**:per-line-prefix** *string*}  
**:suffix** *string*<sub>0</sub>}))

(**declare** *decl*<sup>\*</sup>)<sup>P\*</sup> *form*<sup>P\*</sup>)

▷ Evaluate *forms*, which should print *list*, with *stream* locally bound to a pretty printing stream which outputs to the original *stream*. If *list* is in fact not a list, it is printed by **write**. Return **NIL**.

## 13 Input/Output

### 13.1 Predicates

(<sup>Fu</sup>**streamp** *foo*)

(<sup>Fu</sup>**pathnamep** *foo*) ▷ **T** if *foo* is of indicated type.

(<sup>Fu</sup>**readablep** *foo*)

(<sup>Fu</sup>**input-stream-p** *stream*)

(<sup>Fu</sup>**output-stream-p** *stream*)

(<sup>Fu</sup>**interactive-stream-p** *stream*)

(<sup>Fu</sup>**open-stream-p** *stream*)

▷ Return **T** if *stream* is for input, for output, interactive, or open, respectively.

(<sup>Fu</sup>**pathname-match-p** *path* *wildcard*)

▷ **T** if *path* matches *wildcard*.

(<sup>Fu</sup>**wild-pathname-p** *path* [{**:host** | **:device** | **:directory** | **:name** | **:type** | **:version** | **NIL**])

▷ Return **T** if indicated component in *path* is wildcard. (**NIL** indicates any component.)

### 13.2 Reader

{<sup>Fu</sup>**y-or-n-p**  
<sup>Fu</sup>**yes-or-no-p**}

[*control* *arg*<sup>\*</sup>])

▷ Ask user a question and return **T** or **NIL** depending on their answer. See p. 38, **format**, for *control* and *args*.

(<sup>M</sup>**with-standard-io-syntax** *form*<sup>P\*</sup>)

▷ Evaluate *forms* with standard behaviour of reader and printer. Return *values* of *forms*.

{<sup>Fu</sup>**read**  
<sup>Fu</sup>**read-preserving-whitespace**}

[*stream* <sup>var</sup>**\*standard-input\*** [*eof-err*<sub>0</sub>]

[*eof-val*<sub>NI</sub> [*recursive*<sub>NI</sub>]])])

▷ Read printed representation of *object*.

(<sup>Fu</sup>**read-from-string** *string* [*eof-error*<sub>0</sub>] [*eof-val*<sub>NI</sub>]

{**:start** *start*<sub>0</sub>  
**:end** *end*<sub>NI</sub>  
**:preserve-whitespace** *bool*<sub>NI</sub>})])])

▷ Return *object* read from string and zero-indexed *position* of next character.

(<sup>Fu</sup>**read-delimited-list** *char* [*stream* <sup>var</sup>**\*standard-input\*** [*recursive*<sub>NI</sub>]])

▷ Continue reading until encountering *char*. Return *list* of objects read. Signal error if no *char* is found in stream.

(<sup>Fu</sup>**read-char** [*stream* <sup>var</sup>**\*standard-input\*** [*eof-err*<sub>0</sub>] [*eof-val*<sub>NI</sub>]

[*recursive*<sub>NI</sub>]])])

▷ Return *next* character from *stream*.

(<sup>Fu</sup>**read-char-no-hang** [*stream* <sup>var</sup>**\*standard-input\*** [*eof-error*<sub>0</sub>] [*eof-val*<sub>NI</sub>]

[*recursive*<sub>NI</sub>]])])

▷ *Next* character from *stream* or **NIL** if none is available.

(<sup>Fu</sup>**peek-char** [*mode*<sub>NI</sub>] [*stream* <sup>var</sup>**\*standard-input\*** [*eof-error*<sub>0</sub>] [*eof-val*<sub>NI</sub>]

[*recursive*<sub>NI</sub>]])])

▷ *Next*, or if *mode* is **T**, next non-whitespace character, or if *mode* is a character, *next* instance of it, from *stream* without removing it there.

(<sup>Fu</sup>**unread-char** *character* [*stream* <sup>var</sup>**\*standard-input\***])

▷ Put last **read-char**ed *character* back into *stream*; return **NIL**.

(<sup>Fu</sup>**read-byte** [*stream* [*eof-err*<sub>0</sub>] [*eof-val*<sub>NI</sub>]])

▷ Read *next* byte from binary *stream*.

<sup>Fu</sup>**(read-line** [*stream* <sup>var</sup>**\*standard-input\*** [*eof-err* **T**] [*eof-val* **NIL**] [*recursive* **T**]])

▷ Return a line of text from *stream* and **T** if line has been ended by end of file.

<sup>Fu</sup>**(read-sequence** *sequence* *stream* [**:start** *start*] [**:end** *end* **NIL**])

▷ Replace elements of *sequence* between *start* and *end* with elements from binary or character *stream*. Return index of *sequence*'s first unmodified element.

<sup>Fu</sup>**(readtable-case** *readtable*)<sup>cupcase</sup>

▷ Case sensitivity attribute (one of **:upcase**, **:downcase**, **:preserve**, **:invert**) of *readtable*. **setfable**.

<sup>Fu</sup>**(copy-readtable** [*from-readtable* <sup>var</sup>**\*readtable\***] [*to-readtable* **NIL**])

▷ Return copy of *from-readtable*.

<sup>Fu</sup>**(set-syntax-from-char** *to-char* *from-char* [*to-readtable* <sup>var</sup>**\*readtable\***] [*from-readtable* **standard-readtable**])

▷ Copy syntax of *from-char* to *to-readtable*. Return T.

<sup>var</sup>**\*readtable\*** ▷ Current readtable.

<sup>var</sup>**\*read-base\***<sup>T</sup> ▷ Radix for reading **integers** and **ratios**.

<sup>var</sup>**\*read-default-float-format\***<sup>single-float</sup>

▷ Floating point format to use when not indicated in the number read.

<sup>var</sup>**\*read-suppress\***<sup>NIL</sup>

▷ If **T**, reader is syntactically more tolerant.

<sup>Fu</sup>**(set-macro-character** *char* *function* [*non-term-p* **NIL**] [*rt* <sup>var</sup>**\*readtable\***])

▷ Make *char* a macro character associated with *function* of stream and *char*. Return T.

<sup>Fu</sup>**(get-macro-character** *char* [*rt* <sup>var</sup>**\*readtable\***])

▷ Reader macro function associated with *char*, and **T** if *char* is a non-terminating macro character.

<sup>Fu</sup>**(make-dispatch-macro-character** *char* [*non-term-p* **NIL**] [*rt* <sup>var</sup>**\*readtable\***])

▷ Make *char* a dispatching macro character. Return T.

<sup>Fu</sup>**(set-dispatch-macro-character** *char* *sub-char* *function* [*rt* <sup>var</sup>**\*readtable\***])

▷ Make *function* of stream, *n*, *sub-char* a dispatch function of *char* followed by *n*, followed by *sub-char*. Return T.

<sup>Fu</sup>**(get-dispatch-macro-character** *char* *sub-char* [*rt* <sup>var</sup>**\*readtable\***])

▷ Dispatch function associated with *char* followed by *sub-char*.

### 13.3 Character Syntax

**#|** *multi-line-comment* **|#**

**;** *one-line-comment*

▷ Comments. There are stylistic conventions:

**;;;** *title* ▷ Short title for a block of code.

**;;;** *intro* ▷ Description before a block of code.

**::** *state* ▷ State of program or of following code.

**;** *explanation*

**;** *continuation* ▷ Regarding line on which it appears.

*foo*\*[. *bar* **NIL**]) ▷ List of *foos* with the terminating cdr *bar*.

" ▷ Begin and end of a string.

'*foo* ▷ (<sup>so</sup>**quote** *foo*); *foo* unevaluated.

`([*foo*] [*bar*] [**@** *baz*] [<sup>so</sup>**quote**] [*quux*] [*bing*])

▷ Backquote. <sup>so</sup>**quote** *foo* and *bing*; evaluate *bar* and splice the lists *baz* and *quux* into their elements. When nested, outermost commas inside the innermost backquote expression belong to this backquote.

**#\c** ▷ (<sup>Fu</sup>**character** "c"), the character *c*.

**#Bn**; **#On**; *n*; **#Xn**; **#rRn**

▷ Integer of radix 2, 8, 10, 16, or *r*;  $2 \leq r \leq 36$ .

*n/d* ▷ The **ratio**  $\frac{n}{d}$ .

{ [*m*].*n*{**S****F****D****L****E**}*x* **ex**] [*m*].[*n*]{**S****F****D****L****E**}*x* }

▷ *m.n*·10<sup>*x*</sup> as **short-float**, **single-float**, **double-float**, **long-float**, or the type from **\*read-default-float-format\***.

**#C**(*a b*) ▷ (<sup>Fu</sup>**complex** *a b*), the complex number *a* + *bi*.

**#'foo** ▷ (<sup>so</sup>**function** *foo*); the function named *foo*.

**#nAsequence** ▷ *n*-dimensional array.

**#[n](foo\*)**

▷ Vector of some (or *n*) *foos* filled with last *foo* if necessary.

**#[n]\*b\***

▷ Bit vector of some (or *n*) *bs* filled with last *b* if necessary.

**#S**(*type* {*slot value*}\*) ▷ Structure of *type*.

**#Pstring** ▷ A pathname.

**#:foo** ▷ Uninterned symbol *foo*.

**#.form** ▷ Read-time value of *form*.

<sup>var</sup>**\*read-eval\***<sup>T</sup> ▷ If **NIL**, a **reader-error** is signalled at **#.**

**#integer= foo** ▷ Give *foo* the label *integer*.

**#integer#** ▷ Object labelled *integer*.

**#<** ▷ Have the reader signal **reader-error**.

**#+feature when-feature**

**#-feature unless-feature**

▷ Means *when-feature* if *feature* is **T**; means *unless-feature* if *feature* is **NIL**. *feature* is a symbol from **\*features\***, or (**{and}** *feature\**), or (**{not}** *feature*).

<sup>var</sup>**\*features\***

▷ List of symbols denoting implementation-dependent features.

|*c*\*|; \c

▷ Treat arbitrary character(s) *c* as alphabetic preserving case.

### 13.4 Printer

{ <sup>Fu</sup>**prin1** <sup>Fu</sup>**print** <sup>Fu</sup>**pprint** <sup>Fu</sup>**princ** } *foo* [*stream* <sup>var</sup>**\*standard-output\***])

▷ Print *foo* to *stream* <sup>Fu</sup>**readably**, <sup>Fu</sup>**readably** between a newline and a space, <sup>Fu</sup>**readably** after a newline, or human-readably without any extra characters, respectively. <sup>Fu</sup>**prin1**, <sup>Fu</sup>**print** and <sup>Fu</sup>**princ** return *foo*.

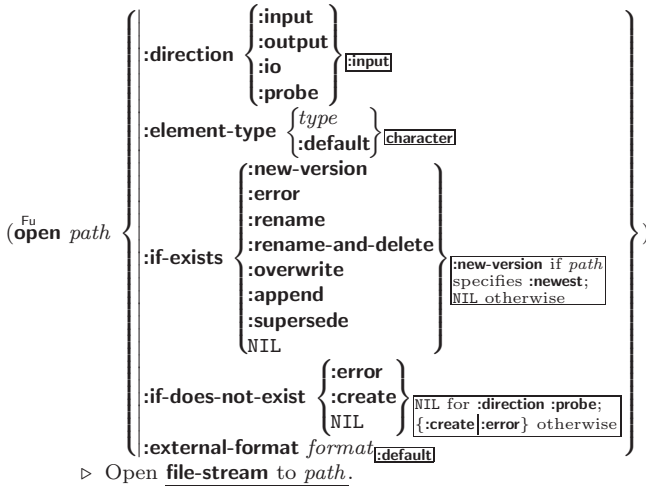

<sup>Fu</sup>**(prin1-to-string** *foo*)

<sup>Fu</sup>**(princ-to-string** *foo*)

▷ Print *foo* to *string* <sup>Fu</sup>**readably** or human-readably, respectively.

- ~ [prefix {,prefix}\*] [:] [Ⓞ] / [package :[:cl-user]] function/
  - ▷ **Call Function.** Call all-uppercase `package::function` with the arguments stream, format-argument, colon-p, at-sign-p and `prefixes` for printing format-argument.
- ~ [:] [Ⓞ] **W**
  - ▷ **Write.** Print argument of any type obeying every printer control variable. With `:`, pretty-print. With `Ⓞ`, print without limits on length or depth.
- {**V**|#}
  - ▷ In place of the comma-separated prefix parameters: use next argument or number of remaining unprocessed arguments, respectively.

### 13.6 Streams

- (<sup>Fu</sup>make-concatenated-stream *input-stream\**)
- (<sup>Fu</sup>make-broadcast-stream *output-stream\**)
- (<sup>Fu</sup>make-two-way-stream *input-stream-part output-stream-part*)
- (<sup>Fu</sup>make-echo-stream *from-input-stream to-output-stream*)
- (<sup>Fu</sup>make-synonym-stream *variable-bound-to-stream*)
  - ▷ Return stream of indicated type.
- (<sup>Fu</sup>make-string-input-stream *string* [*start*<sub>0</sub> [*end*<sub>NIL</sub>]])
  - ▷ Return a string-stream supplying the characters from `string`.
- (<sup>Fu</sup>make-string-output-stream [:element-type *type*<sub>character</sub>])
  - ▷ Return a string-stream accepting characters (available via <sup>Fu</sup>get-output-stream-string).
- (<sup>Fu</sup>concatenated-stream-streams *concatenated-stream*)
- (<sup>Fu</sup>broadcast-stream-streams *broadcast-stream*)
  - ▷ Return list of streams `concatenated-stream` still has to read from/`broadcast-stream` is broadcasting to.
- (<sup>Fu</sup>two-way-stream-input-stream *two-way-stream*)
- (<sup>Fu</sup>two-way-stream-output-stream *two-way-stream*)
- (<sup>Fu</sup>echo-stream-input-stream *echo-stream*)
- (<sup>Fu</sup>echo-stream-output-stream *echo-stream*)
  - ▷ Return source stream or sink stream of `two-way-stream/echo-stream`, respectively.
- (<sup>Fu</sup>synonym-stream-symbol *synonym-stream*)
  - ▷ Return symbol of `synonym-stream`.
- (<sup>Fu</sup>get-output-stream-string *string-stream*)
  - ▷ Clear and return as a string characters on `string-stream`.
- (<sup>Fu</sup>file-position *stream* [ { :start :end :position } ])
  - ▷ Return position within stream, or set it to position and return T on success.

- (<sup>M</sup>pprint-pop)
  - ▷ Take next element off `list`. If there is no remaining tail of `list`, or `*print-length*` or `*print-circle*` indicate printing should end, send element together with an appropriate indicator to `stream`.
- (<sup>Fu</sup>pprint-tab { :line :line-relative :section :section-relative } *c i* [*stream*<sub>var</sub> *\*standard-output\**])
  - ▷ Move cursor forward to column number  $c + ki$ ,  $k \geq 0$  being as small as possible.
- (<sup>Fu</sup>pprint-indent { :block :current } *n* [*stream*<sub>var</sub> *\*standard-output\**])
  - ▷ Specify indentation for innermost logical block relative to leftmost position/to current position. Return NIL.
- (<sup>M</sup>pprint-exit-if-list-exhausted)
  - ▷ If `list` is empty, terminate logical block. Return NIL otherwise.
- (<sup>Fu</sup>pprint-newline { :linear :fill :miser :mandatory } [*stream*<sub>var</sub> *\*standard-output\**])
  - ▷ Print a conditional newline if `stream` is a pretty printing stream. Return NIL.
- var.* \*print-array\*
  - ▷ If T, print arrays readably.
- var.* \*print-base\*<sub>10</sub>
  - ▷ Radix for printing rationals, from 2 to 36.
- var.* \*print-case\*<sub>upcase</sub>
  - ▷ Print symbol names all uppercase (`:upcase`), all lowercase (`:downcase`), capitalized (`:capitalize`).
- var.* \*print-circle\*<sub>NIL</sub>
  - ▷ If T, avoid indefinite recursion while printing circular structure.
- var.* \*print-escape\*<sub>␣</sub>
  - ▷ If NIL, do not print escape characters and package prefixes.
- var.* \*print-gensym\*<sub>␣</sub>
  - ▷ If T, print `#:` before uninterned symbols.
- var.* \*print-length\*<sub>NIL</sub>
- var.* \*print-level\*<sub>NIL</sub>
- var.* \*print-lines\*<sub>NIL</sub>
  - ▷ If integer, restrict printing of objects to that number of elements per level/to that depth/to that number of lines.
- var.* \*print-miser-width\*
- ▷ If integer and greater than the width available for printing a substructure, switch to the more compact miser style.
- var.* \*print-pretty\*
  - ▷ If T, print pretty.
- var.* \*print-radix\*<sub>NIL</sub>
  - ▷ If T, print rationals with a radix indicator.
- var.* \*print-readably\*<sub>NIL</sub>
  - ▷ If T, print readably or signal error `print-not-readable`.
- var.* \*print-right-margin\*<sub>NIL</sub>
  - ▷ Right margin width in ems while pretty-printing.
- (<sup>Fu</sup>set-pprint-dispatch *type function* [*priority*<sub>0</sub> [*table*<sub>var</sub> *\*print-pprint-dispatch\**]])
  - ▷ Install entry comprising `function` of arguments `stream` and object to print; and `priority` as `type` into `table`. If `function` is NIL, remove `type` from `table`. Return NIL.
- (<sup>Fu</sup>pprint-dispatch *foo* [*table*<sub>var</sub> *\*print-pprint-dispatch\**])
  - ▷ Return highest priority function associated with type of `foo` and T if there was a matching type specifier in `table`.

(<sup>Fu</sup>**copy-pprint-dispatch** [*table* <sup>var</sup>**\*print-pprint-dispatch\***])  
 ▷ Return *copy* of *table* or, if *table* is NIL, initial value of <sup>var</sup>**\*print-pprint-dispatch\***.  
<sup>var</sup>**\*print-pprint-dispatch\*** ▷ Current pretty print dispatch table.

### 13.5 Format

(<sup>M</sup>**formatter** *control*)  
 ▷ Return function of stream and a **&rest** argument applying <sup>Fu</sup>**format** to stream, *control*, and the **&rest** argument returning NIL or any excess arguments.

(<sup>Fu</sup>**format** {T|NIL|*out-string*|*out-stream*} *control* *arg\**)  
 ▷ Output string *control* which may contain ~ directives possibly taking some *args*. Alternatively, *control* can be a function returned by <sup>M</sup>**formatter** which is then applied to *out-stream* and *arg\**. Output to *out-string*, *out-stream* or, if first argument is T, to <sup>var</sup>**\*standard-output\***. Return NIL. If first argument is NIL, return formatted output.

~ [*min-col*<sub>0</sub>] [*col-inc*<sub>0</sub>] [*min-pad*<sub>0</sub>] [*pad-char*<sub>0</sub>]]  
 [:] [**@**] {**A**|**S**}  
 ▷ **Aesthetic/Standard**. Print argument of any type for consumption by humans/by the reader, respectively. With :, print NIL as () rather than nil; with **@**, add *pad-chars* on the left rather than on the right.

~ [*radix*<sub>0</sub>] [*width*<sub>0</sub>] [*pad-char*<sub>0</sub>] [*comma-char*<sub>0</sub>] [*comma-interval*<sub>0</sub>]] [:] [**@**] **R**  
 ▷ **Radix**. (With one or more prefix arguments.) Print argument as number; with :, group digits *comma-interval* each; with **@**, always prepend a sign.

{~**R**|~:**R**|~**@R**|~**@:R**}  
 ▷ **Roman**. Take argument as number and print it as English cardinal number, as English ordinal number, as Roman numeral, or as old Roman numeral, respectively.

~ [*width*<sub>0</sub>] [*pad-char*<sub>0</sub>] [*comma-char*<sub>0</sub>] [*comma-interval*<sub>0</sub>]] [:] [**@**] {**D**|**B**|**O**|**X**}  
 ▷ **Decimal/Binary/Octal/Hexadecimal**. Print integer argument as number. With :, group digits *comma-interval* each; with **@**, always prepend a sign.

~ [*width*<sub>0</sub>] [*dec-digits*<sub>0</sub>] [*shift*<sub>0</sub>] [*overflow-char*<sub>0</sub>] [*pad-char*<sub>0</sub>]] [**@**] **F**  
 ▷ **Fixed-Format Floating-Point**. With **@**, always prepend a sign.

~ [*width*<sub>0</sub>] [*int-digits*<sub>0</sub>] [*exp-digits*<sub>0</sub>] [*scale-factor*<sub>0</sub>] [*overflow-char*<sub>0</sub>] [*pad-char*<sub>0</sub>] [*exp-char*<sub>0</sub>]] [**@**] {**E**|**G**}  
 ▷ **Exponential/General Floating-Point**. Print argument as floating-point number with *int-digits* before decimal point and *exp-digits* in the signed exponent. With ~**G**, choose either ~**E** or ~**F**. With **@**, always prepend a sign.

~ [*dec-digits*<sub>0</sub>] [*int-digits*<sub>0</sub>] [*width*<sub>0</sub>] [*pad-char*<sub>0</sub>]] [:] [**@**] **\$**  
 ▷ **Monetary Floating-Point**. Print argument as fixed-format floating-point number. With :, put sign before any padding; with **@**, always prepend a sign.

{~**C**|~:**C**|~**@C**|~**@:C**}  
 ▷ **Character**. Print, spell out, print in #\ syntax, or tell how to type, respectively, argument as (possibly non-printing) character.

{~(*text* ~)|~:(*text* ~)|~**@**(*text* ~)|~**@**(*text* ~)}  
 ▷ **Case-Conversion**. Convert *text* to lowercase, convert first letter of each word to uppercase, capitalize first word and convert the rest to lowercase, or convert to uppercase, respectively.

{~**P**|~:**P**|~**@P**|~**@:P**}  
 ▷ **Plural**. If argument *eq* 1 print nothing, otherwise print *s*; do the same for the previous argument; if argument *eq* 1 print *y*, otherwise print *ies*; do the same for the previous argument, respectively.

~ [*n*<sub>0</sub>] % ▷ **Newline**. Print *n* newlines.

~ [*n*<sub>0</sub>] &  
 ▷ **Fresh-Line**. Print *n* - 1 newlines if output stream is at the beginning of a line, or *n* newlines otherwise.

{~|~:|~**@**|~**@:**}  
 ▷ **Conditional Newline**. Print a newline like **pprint-newline** with argument **:linear**, **:fill**, **:miser**, or **:mandatory**, respectively.

{~:~<|~**@**<|~<}  
 ▷ **Ignored Newline**. Ignore newline, or whitespace following newline, or both, respectively.

~ [*n*<sub>0</sub>] | ▷ **Page**. Print *n* page separators.

~ [*n*<sub>0</sub>] ~ ▷ **Tilde**. Print *n* tildes.

~ [*min-col*<sub>0</sub>] [*col-inc*<sub>0</sub>] [*min-pad*<sub>0</sub>] [*pad-char*<sub>0</sub>]]  
 [:] [**@**] < [*nl-text* ~ [*spare*<sub>0</sub>] [*width*<sub>0</sub>]]:] {*text* ~;}<sup>\*</sup> *text* ~>  
 ▷ **Justification**. Justify text produced by *texts* in a field of at least *min-col* columns. With :, right justify; with **@**, left justify. If this would leave less than *spare* characters on the current line, output *nl-text* first.

~ [:] [**@**] < { [*prefix*<sub>0</sub> ~:] [*per-line-prefix* ~**@**]; } *body* [~; *suffix*<sub>0</sub> ~:] [**@**] >  
 ▷ **Logical Block**. Act like **pprint-logical-block** using *body* as <sup>Fu</sup>**format** control string on the elements of the list argument or, with **@**, on the remaining arguments, which are extracted by **pprint-pop**. With :, *prefix* and *suffix* default to ( and ). When closed by ~**@**>, spaces in *body* are replaced with conditional newlines.

{~ [*n*<sub>0</sub>] |~ [*n*<sub>0</sub>] :|**i**}  
 ▷ **Indent**. Set indentation to *n* relative to leftmost/current position.

~ [*c*<sub>0</sub>] [*i*<sub>0</sub>] [:] [**@**] **T**  
 ▷ **Tabulate**. Move cursor forward to column number *c* + *ki*, *k* ≥ 0 being as small as possible. With :, calculate column numbers relative to the immediately enclosing section. With **@**, move to column number *c*<sub>0</sub> + *c* + *ki* where *c*<sub>0</sub> is the current position.

{~ [*m*<sub>0</sub>] \*|~ [*m*<sub>0</sub>] :\*|~ [*n*<sub>0</sub>] **@\***}  
 ▷ **Go-To**. Jump *m* arguments forward, or backward, or to argument *n*.

~ [*limit*<sub>0</sub>] [:] [**@**] { *text* ~ }  
 ▷ **Iteration**. Use *text* repeatedly, up to *limit*, as control string for the elements of the list argument or (with **@**) for the remaining arguments. With : or **@**, list elements or remaining arguments should be lists of which a new one is used at each iteration step.

~ [*x* [*y* [*z*]]] ^  
 ▷ **Escape Upward**. Leave immediately ~< ~>, ~< ~:~>, ~{ ~}, ~?, or the entire <sup>Fu</sup>**format** operation. With one to three prefixes, act only if *x* = 0, *x* = *y*, or *x* ≤ *y* ≤ *z*, respectively.

~ [*i*] [:] [**@**] [ { [*text* ~;]\* *text* [~:; *default*] ~ }  
 ▷ **Conditional Expression**. Use the zero-indexed argument (or *ith* if given) *text* as a <sup>Fu</sup>**format** control subclause. With :, use the first *text* if the argument value is NIL, or the second *text* if it is T. With **@**, do nothing for an argument value of NIL. Use the only *text* and leave the argument to be read again if it is T.

~ [**@**] ?  
 ▷ **Recursive Processing**. Process two arguments as control string and argument list. With **@**, take one argument as control string and use then the rest of the original arguments.

(<sup>M</sup>**in-package** *foo*) ▷ Make package *foo* current.

{<sup>Fu</sup>**use-package**  
<sup>Fu</sup>**unuse-package**} *other-packages* [*package* <sup>var</sup>**\*package\***]

▷ Make exported symbols of *other-packages* available in *package*, or remove them from *package*, respectively. Return T.

(<sup>Fu</sup>**package-use-list** *package*)

(<sup>Fu</sup>**package-used-by-list** *package*)

▷ List of other packages used by/using *package*.

(<sup>Fu</sup>**delete-package** *package*)

▷ Delete *package*. Return T if successful.

<sup>var</sup>**\*package\*** **common-lisp-user** ▷ The current package.

(<sup>Fu</sup>**list-all-packages**) ▷ List of registered packages.

(<sup>Fu</sup>**package-name** *package*) ▷ Name of *package*.

(<sup>Fu</sup>**package-nicknames** *package*) ▷ List of nicknames of *package*.

(<sup>Fu</sup>**find-package** *name*) ▷ Package with *name* (case-sensitive).

(<sup>Fu</sup>**find-all-symbols** *foo*)

▷ List of symbols *foo* from all registered packages.

{<sup>Fu</sup>**intern**  
<sup>Fu</sup>**find-symbol**} *foo* [*package* <sup>var</sup>**\*package\***]

▷ Intern or find, respectively, symbol *foo* in *package*. Second return value is one of :internal, :external, or :inherited (or NIL if **intern** created a fresh symbol).

(<sup>Fu</sup>**unintern** *symbol* [*package* <sup>var</sup>**\*package\***])

▷ Remove *symbol* from *package*, return T on success.

{<sup>Fu</sup>**import**  
<sup>Fu</sup>**shadowing-import**} *symbols* [*package* <sup>var</sup>**\*package\***]

▷ Make *symbols* internal to *package*. Return T. In case of a name conflict signal correctable **package-error** or shadow the old symbol, respectively.

(<sup>Fu</sup>**shadow** *symbols* [*package* <sup>var</sup>**\*package\***])

▷ Make *symbols* of *package* shadow any otherwise accessible, equally named symbols from other packages. Return T.

(<sup>Fu</sup>**package-shadowing-symbols** *package*)

▷ List of symbols of *package* that shadow any otherwise accessible, equally named symbols from other packages.

(<sup>Fu</sup>**export** *symbols* [*package* <sup>var</sup>**\*package\***])

▷ Make *symbols* external to *package*. Return T.

(<sup>Fu</sup>**unexport** *symbols* [*package* <sup>var</sup>**\*package\***])

▷ Revert *symbols* to internal status. Return T.

{<sup>M</sup>**do-symbols**  
<sup>M</sup>**do-external-symbols**  
<sup>M</sup>**do-all-symbols**} (*var* [*package* <sup>var</sup>**\*package\***] [*result* NIL])

(**declare** *decl*\*)\* {<sup>so</sup>**tag**  
**form**}\*

▷ Evaluate **tagbody**-like body with *var* successively bound to every symbol from *package*, to every external symbol from *package*, or to every symbol from all registered packages, respectively. Return values of *result*. Implicitly, the whole form is a <sup>so</sup>**block** named NIL.

(<sup>M</sup>**with-package-iterator** (*foo* *packages* [:internal][:external][:inherited])

(**declare** *decl*\*)\* *form*<sup>P\*</sup>)

▷ Return values of *forms*. In *forms*, successive invocations of (*foo*) return: T if a symbol is returned; a symbol from *packages*; accessibility (:internal, :external, or :inherited); and the package the symbol belongs to.

(<sup>Fu</sup>**file-string-length** *stream* *foo*)

▷ Length *foo* would have in *stream*.

(<sup>Fu</sup>**listen** [*stream* <sup>var</sup>**\*standard-input\***])

▷ T if there is a character in input *stream*.

(<sup>Fu</sup>**clear-input** [*stream* <sup>var</sup>**\*standard-input\***])

▷ Clear input from *stream*, return NIL.

{<sup>Fu</sup>**clear-output**  
<sup>Fu</sup>**force-output**  
<sup>Fu</sup>**finish-output**} [*stream* <sup>var</sup>**\*standard-output\***])

▷ End output to *stream* and return NIL immediately, after initiating flushing of buffers, or after flushing of buffers, respectively.

(<sup>Fu</sup>**close** *stream* [:abort bool NIL])

▷ Close *stream*. Return T if *stream* had been open. If :abort is T, delete associated file.

(<sup>M</sup>**with-open-file** (*stream* *path* *open-arg*\*) (**declare** *decl*\*)\* *form*<sup>P\*</sup>)

▷ Use **open** with *open-args* to temporarily create *stream* to *path*; return values of forms.

(<sup>M</sup>**with-open-stream** (*foo* *stream*) (**declare** *decl*\*)\* *form*<sup>P\*</sup>)

▷ Evaluate *forms* with *foo* locally bound to *stream*. Return values of forms.

(<sup>M</sup>**with-input-from-string** (*foo* *string* {[:index *index*]  
[:start *start* int]  
[:end *end* NIL]})) (**declare**

*decl*\*)\* *form*<sup>P\*</sup>)

▷ Evaluate *forms* with *foo* locally bound to input **string-stream** from *string*. Return values of forms; store next reading position into *index*.

(<sup>M</sup>**with-output-to-string** (*foo* [*string* NIL] [:element-type *type* character])

(**declare** *decl*\*)\* *form*<sup>P\*</sup>)

▷ Evaluate *forms* with *foo* locally bound to an output **string-stream**. Append output to *string* and return values of forms if *string* is given. Return string containing output otherwise.

(<sup>Fu</sup>**stream-external-format** *stream*)

▷ External file format designator.

<sup>var</sup>**\*terminal-io\*** ▷ Bidirectional stream to user terminal.

<sup>var</sup>**\*standard-input\***  
<sup>var</sup>**\*standard-output\***  
<sup>var</sup>**\*error-output\***

▷ Standard input stream, standard output stream, or standard error output stream, respectively.

<sup>var</sup>**\*debug-io\***  
<sup>var</sup>**\*query-io\***

▷ Bidirectional streams for debugging and user interaction.

## 13.7 Pathnames and Files

(<sup>Fu</sup>make-pathname

```
{
  :host {host|NIL|:unspecific}
  :device {device|NIL|:unspecific}
  :directory {
    {directory:wild|NIL|:unspecific}
    {
      (:absolute :wild)
      (:relative :wild-inferiors)
      :up
      :back
    }
  }
  :name {file-name|wild|NIL|:unspecific}
  :type {file-type|wild|NIL|:unspecific}
  :version {newest|version|wild|NIL|:unspecific}
  :defaults pathhost from *default-pathname-defaults*
  :case {:local|:common|:local}
}
```

▷ Construct pathname. For **:case** **:local**, leave case of components unchanged. For **:case** **:common**, leave mixed-case components unchanged; convert all-uppercase components into local customary case; do the opposite with all-lowercase components.

```
{
  Fupathname-host
  Fupathname-device
  Fupathname-directory
  Fupathname-name
  Fupathname-type
  Fupathname-version path
} path [:case {:local :common}[:local]]
```

▷ Return pathname component.

(<sup>Fu</sup>parse-namestring foo [host [default-pathname<sub>host from \*default-pathname-defaults\*</sub>]

```
{
  :start startint
  :end endint
  :junk-allowed boolint
}]]]
```

▷ Return pathname converted from string, pathname, or stream *foo*; and position where parsing stopped.

(<sup>Fu</sup>merge-pathnames pathname

```
[default-pathnamehost from *default-pathname-defaults*
 [default-versionnewest]])
```

▷ Return pathname after filling in missing components from *default-pathname*.

\*<sup>var</sup>default-pathname-defaults\*

▷ Pathname to use if one is needed and none supplied.

(<sup>Fu</sup>user-homedir-pathname [host]) ▷ User's home directory.

(<sup>Fu</sup>enough-namestring path [root-path<sub>host from \*default-pathname-defaults\*</sub>])

▷ Return minimal path string to sufficiently describe *path* relative to *root-path*.

(<sup>Fu</sup>namestring path)

(<sup>Fu</sup>file-namestring path)

(<sup>Fu</sup>directory-namestring path)

(<sup>Fu</sup>host-namestring path)

▷ Return string representing full pathname; name, type, and version; directory name; or host name, respectively, of *path*.

(<sup>Fu</sup>translate-pathname path wildcard-path-a wildcard-path-b)

▷ Translate *path* from *wildcard-path-a* into *wildcard-path-b*. Return new path.

(<sup>Fu</sup>pathname path) ▷ Pathname of *path*.

(<sup>Fu</sup>logical-pathname logical-path)

▷ Logical pathname of *logical-path*. Logical pathnames are represented as all-uppercase #P"[host:][:]{dir}\*}";\*\*

{name}\* [. {type}\*}+ ] [. {version}\*|newest|NEWEST}]]".

(<sup>Fu</sup>logical-pathname-translations logical-host)

▷ List of (from-wildcard to-wildcard) translations for *logical-host*. setfable.

(<sup>Fu</sup>load-logical-pathname-translations logical-host)

▷ Load *logical-host*'s translations. Return NIL if already loaded; return T if successful.

(<sup>Fu</sup>translate-logical-pathname pathname)

▷ Physical pathname corresponding to (possibly logical) *pathname*.

(<sup>Fu</sup>probe-file file)

(<sup>Fu</sup>truename file)

▷ Canonical name of *file*. If *file* does not exist, return NIL/signal **file-error**, respectively.

(<sup>Fu</sup>file-write-date file)

▷ Time at which *file* was last written.

(<sup>Fu</sup>file-author file)

▷ Return name of file owner.

(<sup>Fu</sup>file-length stream)

▷ Return length of stream.

(<sup>Fu</sup>rename-file foo bar)

▷ Rename file *foo* to *bar*. Unspecified components of path *bar* default to those of *foo*. Return new pathname, old physical file name, and new physical file name.

(<sup>Fu</sup>delete-file file)

▷ Delete *file*. Return T.

(<sup>Fu</sup>directory path)

▷ List of pathnames matching *path*.

(<sup>Fu</sup>ensure-directories-exist path [:verbose bool])

▷ Create parts of *path* if necessary. Second return value is T if something has been created.

## 14 Packages and Symbols

### 14.1 Predicates

(<sup>Fu</sup>symbolp foo)

(<sup>Fu</sup>packagep foo)

(<sup>Fu</sup>keywordp foo)

▷ T if *foo* is of indicated type.

### 14.2 Packages

:bar|keyword:bar ▷ Keyword, evaluates to *:bar*.

package:symbol ▷ Exported *symbol* of *package*.

package::symbol ▷ Possibly unexported *symbol* of *package*.

```
(Mdefpackage foo {
  (:nicknames nick*)*
  (:documentation string)
  (:intern interned-symbol*)*
  (:use used-package*)*
  (:import-from pkg imported-symbol*)*
  (:shadowing-import-from pkg shd-symbol*)*
  (:shadow shd-symbol*)*
  (:export exported-symbol*)*
  (:size int)
})
```

▷ Create or modify package *foo* with *interned-symbols*, *symbols* from *used-packages*, *imported-symbols*, and *shd-symbols*. Add *shd-symbols* to *foo*'s shadowing list.

(<sup>Fu</sup>make-package foo {:nicknames (nick\*)<sub>int</sub> :use (used-package\*)})

▷ Create package *foo*.

(<sup>Fu</sup>rename-package package new-name [new-nicknames<sub>int</sub>])

▷ Rename *package*. Return renamed package.

(<sup>F</sup>**describe-object** *foo* [*stream*])  
 ▷ Send information about *foo* to *stream*. Not to be called by user.

(<sup>Fu</sup>**disassemble** *function*)  
 ▷ Send disassembled representation of *function* to <sup>var</sup>\***standard-output**\*. Return NIL.

## 15.4 Declarations

(<sup>Fu</sup>**proclaim** *decl*)  
 (<sup>M</sup>**declare** *decl*\*)  
 ▷ Globally make declaration(s) *decl*. *decl* can be: **declaration**, **type**, **ftype**, **inline**, **notinline**, **optimize**, or **special**. See below.

(**declare** *decl*\*)  
 ▷ Inside certain forms, locally make declarations *decl*\*. *decl* can be: **dynamic-extent**, **type**, **ftype**, **ignorable**, **ignore**, **inline**, **notinline**, **optimize**, or **special**. See below.

(**declaration** *foo*\*)  
 ▷ Make *foos* names of declarations.

(**dynamic-extent** *variable*\* (<sup>F0</sup>**function** *function*)\*)  
 ▷ Declare lifetime of *variables* and/or *functions* to end when control leaves enclosing block.

(**[type]** *type variable*\*)  
 (**ftype** *type function*\*)  
 ▷ Declare *variables* or *functions* to be of *type*.

(**{ignorable}** <sup>var</sup>**{ignore}** <sup>F0</sup>**{function}** *function*\*)  
 ▷ Suppress warnings about used/unused bindings.

(**inline** *function*\*)  
 (**notinline** *function*\*)  
 ▷ Tell compiler to integrate/not to integrate, respectively, called *functions* into the calling routine.

(**optimize** <sup>F</sup>**{compilation-speed}** (<sup>F</sup>**{compilation-speed}** *n*)  
<sup>F</sup>**{debug}** (<sup>F</sup>**{debug}** *n*)  
<sup>F</sup>**{safety}** (<sup>F</sup>**{safety}** *n*)  
<sup>F</sup>**{space}** (<sup>F</sup>**{space}** *n*)  
<sup>F</sup>**{speed}** (<sup>F</sup>**{speed}** *n*))  
 ▷ Tell compiler how to optimize. *n* = 0 means unimportant, *n* = 1 is neutral, *n* = 3 means important.

(**special** *var*\*) ▷ Declare *vars* to be dynamic.

## 16 External Environment

(<sup>Fu</sup>**get-internal-real-time**)  
 (<sup>Fu</sup>**get-internal-run-time**)  
 ▷ Current time, or computing time, respectively, in clock ticks.

<sup>co</sup>**internal-time-units-per-second**  
 ▷ Number of clock ticks per second.

(<sup>Fu</sup>**encode-universal-time** *sec min hour date month year* [*zone* current])  
 (<sup>Fu</sup>**get-universal-time**)  
 ▷ Seconds from 1900-01-01, 00:00, ignoring leap seconds.

(<sup>Fu</sup>**decode-universal-time** *universal-time* [*time-zone* current])  
 (<sup>Fu</sup>**get-decoded-time**)  
 ▷ Return second, minute, hour, date, month, year, day, daylight-p, and zone.

(<sup>Fu</sup>**room** [{NIL:default T}]})  
 ▷ Print information about internal storage management.

(<sup>Fu</sup>**require** *module* [*paths* nil])  
 ▷ If not in <sup>var</sup>\***modules**\*, try *paths* to load *module* from. Signal **error** if unsuccessful. Deprecated.

(<sup>Fu</sup>**provide** *module*)  
 ▷ If not already there, add *module* to <sup>var</sup>\***modules**\*. Depreciated.

<sup>var</sup>\***modules**\* ▷ List of names of loaded modules.

## 14.3 Symbols

A **symbol** has the attributes *name*, home **package**, property list, and optionally value (of global constant or variable *name*) and function (**function**, macro, or special operator *name*).

(<sup>Fu</sup>**make-symbol** *name*)  
 ▷ Make fresh, uninterned symbol *name*.

(<sup>Fu</sup>**gensym** [*s* g])  
 ▷ Return fresh, uninterned symbol #:s*n* with *n* from <sup>var</sup>\***gensym-counter**\*. Increment <sup>var</sup>\***gensym-counter**\*.

(<sup>Fu</sup>**gentemp** [*prefix* g] [*package* <sup>var</sup>\***package**\*])  
 ▷ Intern fresh symbol in package. Depreciated.

(<sup>Fu</sup>**copy-symbol** *symbol* [*props* nil])  
 ▷ Return uninterned copy of *symbol*. If *props* is T, give copy the same value, function and property list.

(<sup>Fu</sup>**symbol-name** *symbol*)  
 (<sup>Fu</sup>**symbol-package** *symbol*)  
 (<sup>Fu</sup>**symbol-plist** *symbol*)  
 (<sup>Fu</sup>**symbol-value** *symbol*)  
 (<sup>Fu</sup>**symbol-function** *symbol*)  
 ▷ Name, package, property list, value, or function, respectively, of *symbol*. **setfable**.

(<sup>F</sup>**{documentation}** (<sup>F</sup>**{(setf documentation) new-doc}** *foo* **{'variable'|'function'|'compiler-macro'|'method-combination'|'structure'|'type'|'setf|T}**})  
 ▷ Get/set documentation string of *foo* of given type.

<sup>co</sup>**t**  
 ▷ Truth; the supertype of every type including <sup>var</sup>**t**; the superclass of every class except <sup>var</sup>**t**; <sup>var</sup>\***terminal-io**\*.

<sup>co</sup>**nil**()  
 ▷ Falsity; the empty list; the empty type, subtype of every type; <sup>var</sup>\***standard-input**\*; <sup>var</sup>\***standard-output**\*; the global environment.

## 14.4 Standard Packages

**common-lisp|cl**  
 ▷ Exports the defined names of Common Lisp except for those in the **keyword** package.

**common-lisp-user|cl-user**  
 ▷ Current package after startup; uses package **common-lisp**.

**keyword**  
 ▷ Contains symbols which are defined to be of type **keyword**.

## 15 Compiler

### 15.1 Predicates

(<sup>Fu</sup>**special-operator-p** *foo*) ▷ T if *foo* is a special operator.

(<sup>Fu</sup>**compiled-function-p** *foo*)  
 ▷ T if *foo* is of type **compiled-function**.

## 15.2 Compilation

<sup>Fu</sup>**compile**  $\left\{ \begin{array}{l} \text{NIL definition} \\ \left\{ \begin{array}{l} \text{name} \\ \text{(setf name)} \end{array} \right\} [\text{definition}] \end{array} \right\}$

▷ Return compiled function or replace *name*'s function definition with the compiled function. Return T in case of warnings or errors, and T in case of warnings or errors excluding style warnings.

<sup>Fu</sup>**compile-file** *file*  $\left\{ \begin{array}{l} \text{:output-file } \textit{out-path} \\ \text{:verbose } \textit{bool} \left\{ \begin{array}{l} \text{var} \\ \text{*compile-verbose*} \end{array} \right\} \\ \text{:print } \textit{bool} \left\{ \begin{array}{l} \text{var} \\ \text{*compile-print*} \end{array} \right\} \\ \text{:external-format } \textit{file-format} \left\{ \begin{array}{l} \text{var} \\ \text{cdefault} \end{array} \right\} \end{array} \right\}$

▷ Write compiled contents of *file* to *out-path*. Return true output path or NIL, T in case of warnings or errors, T in case of warnings or errors excluding style warnings.

<sup>Fu</sup>**compile-file-pathname** *file*  $\left[ \begin{array}{l} \text{:output-file } \textit{path} \\ \textit{other-keyargs} \end{array} \right]$

▷ Pathname **compile-file** writes to if invoked with the same arguments.

<sup>Fu</sup>**load** *path*  $\left\{ \begin{array}{l} \text{:verbose } \textit{bool} \left\{ \begin{array}{l} \text{var} \\ \text{*load-verbose*} \end{array} \right\} \\ \text{:print } \textit{bool} \left\{ \begin{array}{l} \text{var} \\ \text{*load-print*} \end{array} \right\} \\ \text{:if-does-not-exist } \textit{bool} \left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\} \\ \text{:external-format } \textit{file-format} \left\{ \begin{array}{l} \text{var} \\ \text{cdefault} \end{array} \right\} \end{array} \right\}$

▷ Load source file or compiled file into Lisp environment. Return T if successful.

<sup>var</sup>**\*compile-file\***  $\left\{ \begin{array}{l} \text{pathname} \left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\} \\ \text{truename} \left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\} \end{array} \right\}$

▷ Input file used by <sup>Fu</sup>**compile-file**/by <sup>Fu</sup>**load**.

<sup>var</sup>**\*compile\***  $\left\{ \begin{array}{l} \text{print} \\ \text{verbose} \end{array} \right\}$

▷ Defaults used by <sup>Fu</sup>**compile-file**/by <sup>Fu</sup>**load**.

<sup>so</sup>**eval-when**  $\left( \left\{ \begin{array}{l} \text{:compile-toplevel} \left\{ \begin{array}{l} \text{compile} \end{array} \right\} \\ \text{:load-toplevel} \left\{ \begin{array}{l} \text{load} \end{array} \right\} \\ \text{:execute} \left\{ \begin{array}{l} \text{eval} \end{array} \right\} \end{array} \right\} \right) \textit{form}^{\text{P}}$

▷ Return values of *forms* if **eval-when** is in the top-level of a file being compiled, in the top-level of a compiled file being loaded, or anywhere, respectively. Return NIL if *forms* are not evaluated. (**compile**, **load** and **eval** deprecated.)

<sup>so</sup>**locally**  $\left( \widehat{\text{declare } \textit{decl}^*} \right) \textit{form}^{\text{P}}$

▷ Evaluate *forms* in a lexical environment with declarations *decl* in effect. Return values of forms.

<sup>M</sup>**with-compilation-unit**  $\left( \left[ \text{:override } \textit{bool} \left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\} \right] \right) \textit{form}^{\text{P}}$

▷ Return values of forms. Warnings deferred by the compiler until end of compilation are deferred until the end of evaluation of *forms*.

<sup>so</sup>**load-time-value** *form*  $\left[ \widehat{\text{read-only}} \left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\} \right]$

▷ Evaluate *form* at compile time and treat its value as literal at run time.

<sup>so</sup>**quote** *foo* ▷ Return unevaluated foo.

<sup>Fu</sup>**make-load-form** *foo* [*environment*]

▷ Its methods are to return a creation form which on evaluation at **load** time returns an object equivalent to *foo*, and an optional initialization form which on evaluation performs some initialization of the object.

<sup>Fu</sup>**make-load-form-saving-slots** *foo*  $\left\{ \begin{array}{l} \text{:slot-names } \textit{slots} \left\{ \begin{array}{l} \text{all} \\ \text{local slots} \end{array} \right\} \\ \text{:environment } \textit{environment} \end{array} \right\}$

▷ Return a creation form and an initialization form which on evaluation construct an object equivalent to *foo* with *slots* initialized with the corresponding values from *foo*.

<sup>Fu</sup>**macro-function** *symbol* [*environment*]

<sup>Fu</sup>**compiler-macro-function**  $\left\{ \begin{array}{l} \textit{name} \\ \text{(setf name)} \end{array} \right\}$  [*environment*]

▷ Return specified macro function, or compiler macro function, respectively, if any. Return NIL otherwise. **setfable**.

<sup>Fu</sup>**eval** *arg*

▷ Return values of value of arg evaluated in global environment.

## 15.3 REPL and Debugging

```
var var | var
+|+|+|+|+
var var | var
*|*|*|*|*
var var | var
//|//|//
```

▷ Last, penultimate, or antepenultimate form evaluated in the REPL, or their respective primary value, or a list of their respective values.

<sup>var</sup>  $\left[ \text{form} \right]$  ▷ Form currently being evaluated by the REPL.

<sup>Fu</sup>**apropos** *string* [*package*  $\left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\}$ ]

▷ Print interned symbols containing *string*.

<sup>Fu</sup>**apropos-list** *string* [*package*  $\left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\}$ ]

▷ List of interned symbols containing *string*.

<sup>Fu</sup>**dribble** [*path*]

▷ Save a record of interactive session to file at *path*. Without *path*, close that file.

<sup>Fu</sup>**ed** [*file-or-function*  $\left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\}$ ]

▷ Invoke editor if possible.

$\left\{ \begin{array}{l} \text{macroexpand-1} \\ \text{macroexpand} \end{array} \right\}$  *form* [*environment*  $\left\{ \begin{array}{l} \text{var} \\ \text{nil} \end{array} \right\}$ ]

▷ Return macro expansion, once or entirely, respectively, of *form* and T if *form* was a macro form. Return form and NIL otherwise.

<sup>var</sup>**\*macroexpand-hook\***

▷ Function of arguments expansion function, macro form, and environment called by <sup>Fu</sup>**macroexpand-1** to generate macro expansions.

<sup>M</sup>**trace**  $\left\{ \begin{array}{l} \textit{function} \\ \text{(setf function)} \end{array} \right\}^*$

▷ Cause *functions* to be traced. With no arguments, return list of traced functions.

<sup>M</sup>**untrace**  $\left\{ \begin{array}{l} \textit{function} \\ \text{(setf function)} \end{array} \right\}^*$

▷ Stop *functions*, or each currently traced function, from being traced.

<sup>var</sup>**\*trace-output\***

▷ Stream <sup>M</sup>**trace** and <sup>M</sup>**time** print their output on.

<sup>M</sup>**step** *form*

▷ Step through evaluation of *form*. Return values of form.

<sup>Fu</sup>**break** [*control arg*\*]

▷ Jump directly into debugger; return NIL. See p. 38, <sup>Fu</sup>**format**, for *control* and *args*.

<sup>M</sup>**time** *form*

▷ Evaluate *forms* and print timing information to <sup>var</sup>**\*trace-output\***. Return values of form.

<sup>Fu</sup>**inspect** *foo*

▷ Interactively give information about *foo*.

<sup>Fu</sup>**describe** *foo* [*stream*  $\left\{ \begin{array}{l} \text{var} \\ \text{*standard-outputs*} \end{array} \right\}$ ]

▷ Send information about *foo* to *stream*.

(<sup>Fu</sup>short-site-name)  
 (<sup>Fu</sup>long-site-name)

▷ String representing physical location of computer.

{<sup>Fu</sup>lisp-implementation}  
 {<sup>Fu</sup>software machine} - {type version}

▷ Name or version of implementation, operating system, or hardware, respectively.

(<sup>Fu</sup>machine-instance)

▷ Computer name.
